With CA-LIBRARIAN You Have As Much Change Control As He Does. Almost.

Our library management system has evolved to a higher plane of existence. CA-LIBRARIAN® is now the only comprehensive software package that combines library management and change control for all IBM operating environments.

You can now rely on CA-LIBRARIAN to manage the thousands of program changes taking place in your source library every year. You get on-line audit capability, automatic synchronization to ensure

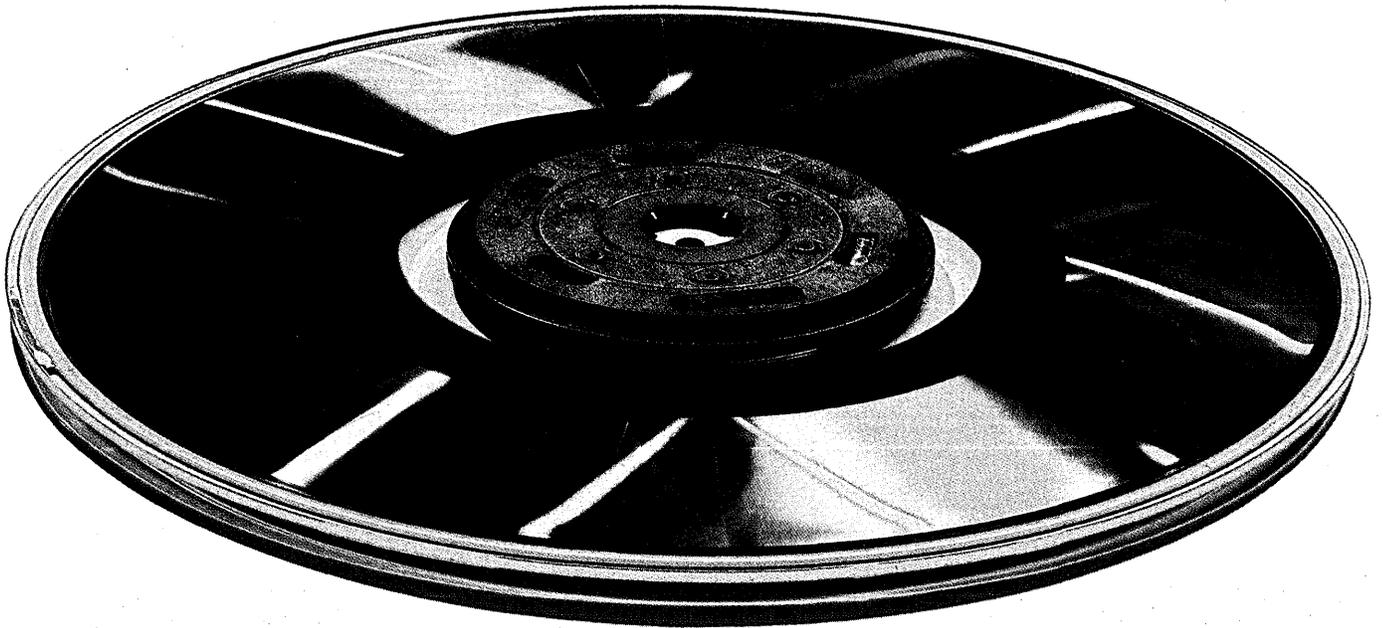

every change is valid within your system. Built-in security reinforcement. Plus, a complete record of code changes made on a day-to-day basis.

To date, more than 7,000 facilities have come to rely on CA-LIBRARIAN. Find out why by calling Jamie Brooks at 800-237-9273 (in N.J., 201-874-9000). And discover what it's like to have total control over your destiny.

Well, almost.

S/370 OPTICAL STORAGE

An Online Alternative for Microfiche, Printed Output, Image Data, and more...

Consider these advantages:

Multiuser Online Query
Direct Record Access
Automated Optical Disk Libraries
High Capacity Storage

Mainframe Compatibility
Proven Performance
Cost Savings

Whether it's coded data or image data, the DW 34800 Optical Storage Subsystem stores billions of bytes online—so you can query, process, and distribute information on your mainframe quickly and easily.

Call us.

We'll tell you how the DW 34800 Optical Storage Subsystem can put hundreds of gigabytes of image or coded data online, providing direct access to your data and reducing costs at the same time. We'll be glad to answer your questions about S/370 Optical Storage.

DW 34800 performance and features are available now:

MAINFRAME COMPATIBILITY

Data/Ware's DW 34800 Optical Storage Subsystem plugs directly into IBM® S/370 and PCM systems. It attaches as a standard device directly to the channel of your mainframe and provides you with automated optical disk libraries that operate unattended.

HIGH CAPACITY STORAGE.

Data storage capacities from 190 to 760 gigabytes are ordinary tasks for the DW 34800, making it a natural storage device for the large-capacity requirements of image data. Its flexible configurations handle up to four libraries and sixteen optical disk drives from a single subsystem.

DIRECT RECORD ACCESS

The DW 34800 is fast. It provides you direct access to any data on a drive-mounted platter in milliseconds. Automated retrieval of an optical disk in the robotic library is in seconds.

MULTIUSER SHARED ACCESS

Data/Ware's optional Mainframe Document Storage and Retrieval System software (MDRS) is a convenient application interface aiding the integration of the DW 34800 into your document storage and retrieval environment. The MDRS software provides shared direct access to your optically-stored data via high-level

languages, as well as multi-user query capability from TSO, CICS, IMS, and VTAM communications systems.

SERVICE SUPPORT

Data/Ware's maintenance partnership with National Advanced Systems assures a network of DW 34800 parts and service that will meet your needs 365 days a year.

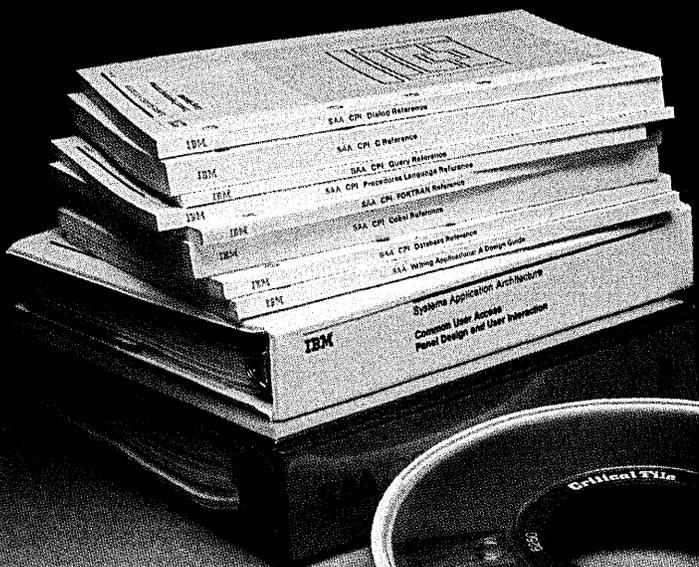

That's just the beginning.

There's a lot more to tell.

For further facts about the benefits of optical storage using the DW 34800, call Gary Holtwick at...

IBM 1989

SAA. Oracle has it today.

In 1978, IBM drafted the specification for a new relational database technology called Structured Query Language, or SQL. Then, in 1979, two years before IBM delivered SQL/DS, Oracle Corporation delivered the first commercial implementation of SQL and has since become the largest database company in the world.

In 1988, IBM again produced a blueprint for the future of heterogeneous computing: Systems Application Architecture, or SAA. Oracle more than endorses this innovative vision. Oracle is delivering it. Today.

IBM's goals for SAA: "Applications that can be ported with less effort; applications that can span systems; user access to these applications that is simpler and more uniform; and programming skills that have broader applicability!"

ORACLE is the only database software that runs on mainframes, minicomputers and PCs. In fact, ORACLE provides data transparency across your MVS, VM, VSE, and OS/2 environments in addition to over 80 other platforms and operating systems. Today.

More than just a software company

Oracle offers more than just software. We offer solutions. No other database company can offer a full suite of services including systems integration, education, consulting and the #1 customer support² in the industry. Which is why Oracle has become the largest database company in the world.³

Just as SQL was the future of data management in 1978, SAA is the future in 1989. Make an Oracle seminar part of your future, today. Call 1-800-345-DBMS to reserve your seat in the next Oracle seminar in your area: So you won't be somebody else's first customer, tomorrow.

ORACLE 1989
Always a step ahead.

COVER STORY

Who's Winning the Supercomputer Race? 18

BY WILLIE SCHATZ Cray Research's current problems, the demise of ETA Systems and advancements in Japanese technology seem to spell doom and gloom for the U.S. supercomputer industry. The Japanese may be ahead in base technology and raw computing power, but the United States still seems to have an edge in systems and applications software.

What's the Supercomputer Race About?

From all the talk and press coverage, one might surmise that the U.S. supercomputer industry is on the endangered species list. After all, the acknowledged industry leader, Cray Research Inc., is undergoing significant change. The company has transferred founder Seymour Cray to a new spinoff, Cray Computer Corp., to continue the expensive development of a supercomputer based on risky gallium arsenide technology. Meanwhile, Control Data Corp. terminated its ETA Systems supercomputer subsidiary altogether. And it seems that Tokyo-based NEC Corp.'s machines may have surpassed Cray's in computing speeds. All of these events could be construed as a rather dark picture of a leading American industry.

The predator in this case is, of course, the fearsome Japanese computer industry—in particular NEC, Fujitsu Ltd. and Hitachi Ltd. Mindful of the fact that the Japanese have dealt a deadly blow to the U.S. semiconductor industry in the area of memory chips, observers of recent events in the U.S. supercomputer industry have been given to much handwringing. Will the Japanese companies, with their longer term view and government support, be able to surpass the U.S. supercomputer industry technologically, thereby placing the U.S. military establishment and the IS industry in position of dependency on a foreign supplier? With Seymour Cray's new company not yet off the ground, and an IBM-backed start-up, Supercomputer Systems Inc., yet to produce its first product, the U.S. supercomputer industry is effectively down to one company. What will happen to the U.S. position in supercomputers now?

There is little question about the formidable nature of the Japanese computer companies. They are large, well financed and motivated to succeed in all levels of the computer and electronics industries. But as our cover story, "Who's Winning the Supercomputer Race?" page 18, reveals, the technological facts may tell something of a different story when it comes to supercomputers. "A hard look at a technological scorecard shows that handwringing is probably justified in the areas of base technology and raw computing power," writes Washington bureau manager Willie Schatz. "... But in the critical areas of systems and applications software, sighs of woe may be a bit premature."

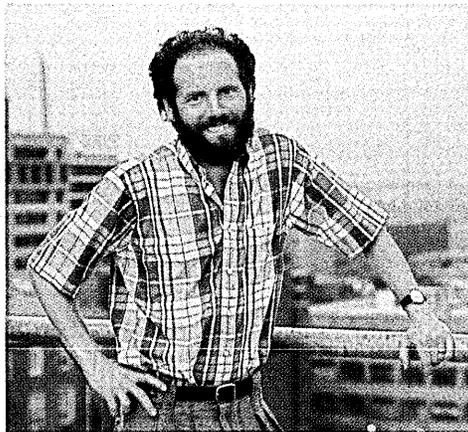

The Other End of the Spectrum

The role that Lotus Development Corp.'s 1-2-3 spreadsheet played in rocketing the personal computer to fame and fortune has become almost the stuff of legend. But now users are facing a difficult choice, says Dallas bureau manager Bob Francis. Should they migrate to the thrice-delayed release 3.0 or go to the less expensive, but only recently disclosed, release 2.2? Boot up "Muddy Waters," page 31, to help clarify your thinking.

Francis also zeros in on a new challenge facing IS managers. That challenge is the Product Data Exchange Specification, a method of digital product definition that is being touted as a replacement for the Initial Graphics Exchange Specification used in engineering and manufacturing. Changes in the way design, engineering and manufacturing information will be handled could be coming. Access "Competitiveness: A New Standard," page 53, to find out how you should handle those changes.

see MODULAR PLUS

mod'ũ·lar plus, *n.* 1. a new member of the Liebert family of environmental control products. 2. a *variable-capacity* system that utilizes a reliable semi-hermetic compressor, equipped with Liebert exclusive step-control valves. 3. a *micro-processor-based control* that adjusts system capacity and energy usage. 4. a *small footprint* that requires minimal floor space. 5. an addition to the *Liebert class* of computer support systems, esp.: Uninterruptible Power Supplies, Power Conditioning and Distribution, Site Monitoring and Access Control, that keeps information processing operations up and running.

If adaptive, precise control of the computer environment and minimal life-cycle costs are requirements for your information processing systems, call **1-800-942-9477** for the unabridged version of what MODULAR PLUS can mean to you.

 **Liebert**
The first name in reliability.

The Vocational Alternative

I read the Management article [on p. 65] of your March 15 issue of DATAMATION entitled, "Can Education Meet IS Career Demands?" by Leila Davis, with great interest. I am an educator, but I do not come from one of the so-called normal sources of education espoused by the article in question.

Throughout this article I saw multiple examples of IS department heads of prestigious companies having to struggle with identifying where to get competent, educated and qualified computer programmers to staff their maintenance programming needs. Having been in this position myself, many times, I can empathize with their consternation.

Additionally, the article concentrated heavily on identifying the only source for these competent, educated and qualified computer programmers as coming from the campuses of our colleges and universities. Yet, these campuses have not been able to fill the bill, and why is quite clearly explained in the article. So, where can the IS department heads go to fulfill their maintenance programming staff needs?

I suggest the IS and personnel departments of companies in this situation send out envoys to all educational institutions, paying particularly close attention to vocational and technical institute schools. Yes, I said vocational and technical institute schools. These institutions, both public and private, do have extensive and comprehensive courses in computer programming. Curriculums in these schools can provide the technical and professional skills necessary for an entry-level computer programmer to do the required maintenance and developmental programming tasks inherent in business IS shops.

A case in point is the computer programming course which I teach at Clover Park Vocational Technical Institute in Tacoma, Washington. I have developed this course based upon my own experience as a computer programmer, a systems analyst and a manager of programming and analysis shops in a variety of

functional IS support areas. My experience with graduates of various conventional schools has not been the best. Essentially, I got people who could be termed "coders." Rarely did I get programmers who could integrate themselves satisfactorily into an IS environment. All too often, they lacked the very same basic skills identified by Ms. Davis' article. So, when opportunity knocked, I took this job as a computer programming instructor at a voc-tech because I felt their philosophy of training and the environment they espoused was more conducive to allowing students to learn and practice the "real-world" of being a computer programmer—not just theory.

With the opportunity afforded by Clover Park VTI, I developed a curriculum which places heavy emphasis on the skills required by businesses—abilities to read, write, analyze, exercise interpersonal communications skills and manage themselves. These are what I term "professional" skills and I tie them to the technical skills our students need to do the work required in a business IS shop environment. And, we implement this curriculum in the manner proposed by Martha Stone Wiske of Harvard:

"We must move from the transmission approach, in which the knowledge is transmitted from teacher to student, to more of an inquiry approach, in which the teacher and student work together toward the construction of knowledge."

Your article is good. It points out a need and, to a degree, an answer. I hope my response expands on that answer and provides another avenue for employers to satisfy their personnel needs. I know it is one which will work.

Eric Chandler, CDM

Instructor for Computer Programming
Clover Park Vocational
Technical Institute
Tacoma, Wash.

Error of Omission

I am writing in reference to the article, "Spanning the DEC-IBM Worlds," by David Stamps that appeared in the March 1, 1989 issue of DATAMATION [p. 45].

The article accurately described the problems associated with linking the DEC and the IBM worlds. It also correctly assessed the strengths and weaknesses of most of the solutions currently available.

I was surprised, however, that the article did not refer to Teubner & Associates Inc., and to our software product, A-NET. A-NET allows IBM 3270 terminals to access non-IBM computer systems and networks. A-NET runs as a VTAM application on IBM computer systems with the MVS, MVS/XA, VM/CGS or DOS/VSE operating system. A-NET supports a variety of hardware and software techniques to interconnect the IBM and non-IBM environments, including channel-to-channel, Ethernet with TCP/IP, X.25 and asynchronous ASCII.

ACCESS

There are several ways to use DATAMATION beyond just reading it. You can call on our experts—the editors who specialize in certain fields are eager to hear of your experiences in and thoughts on how to manage information technology resources. You can contribute articles to the magazine by supplying us with manuscripts for our review. You can learn how competitors and colleagues are using software and systems from our research department, which can provide details of both published and unpublished studies on various aspects of technology usage. And you can always voice your opinion by submitting a letter to the editor—electronically or by post.

The new vision of Kodak

UNIX, UNISYS AND YOU.

©1988 Unisys Corporation.
UNIX is a registered trademark of AT&T Corp.
VME is a registered trademark of AMD Corp.
MIPS is a registered trademark of MIPS Corp.
MIPS is a registered trademark of Transduction Computer Systems, Inc.

It seems like every computer company wants you to count on their commitment to open systems, total solutions and a customer-oriented outlook.

And then there's Unisys. We're not just asking you to count on some vision of the future. We're here to show you a complete UNIX offering built on a solid framework of deliverable products, designed to reflect what we've learned from our customers.

AN UNMATCHED LINE

Consider our UNIX hardware. It's the most comprehensive commercial UNIX line in the business. From PC to multiple-processor mainframe power, from one to hundreds of users.

Our U Series, for example, combines superior price/performance throughout the line, with PC integration capabilities and high performance.

Our V Series UNIX System V, built in the last few years ago for the most demanding needs, can be used in a wide range of system environments. With a wide range of applications already available, and a wide variety of hardware configurations already developed, it's the most powerful and sophisticated

networking capabilities to make our UNIX systems readily compatible with networks like Ethernet.

And we've put the most popular database software on our systems. Plus productivity tools like Unisys MAPPER, LINC and ALLY systems that go beyond 4GLs and CASE to ease implementation and help reduce training costs.

BUSINESS AS USUAL

The point of it all is to put the real power of the UNIX operating system in your hands. Freedom to design optimal (cost/performance/quality) solutions without technical constraints or changing the way you do business.

When you think about open systems, think about UNIX System V—the open system that's working today. And when you think about the UNIX operating system, think of your freedom to choose any vendor you want.

Then choose Unisys—the computer company that's put it all together. Right now, we're offering a free booklet, *How to Break Open Systems*. A fun and helpful glossary of generic Open Systems terms. It's yours for the asking. Call 800-478-8362.

UNISYS AND YOU
The power of 2

You've invested a lot of time, effort, and experience – not to mention your company's hard-earned money – to ensure that data flows through the MIS department.

So you have a right to expect that any new smart Point-of-Service terminal you install into the system will work compatibly within it.

Nixdorf has made connectivity to the host a prime concern in its new POS system. In addition to having a fully programmable screen, our new 8812 Point-of-Service[®] terminal is EDI, VICS, and UNIX SVID compliant.

It permits transaction logging so that everything can easily be tracked to the lowest level. If there's a disk read error, or a terminal is not running, the system heals itself with an automatic re-start after a crash. The system is capable of unattended operation, and can be run from the host location.

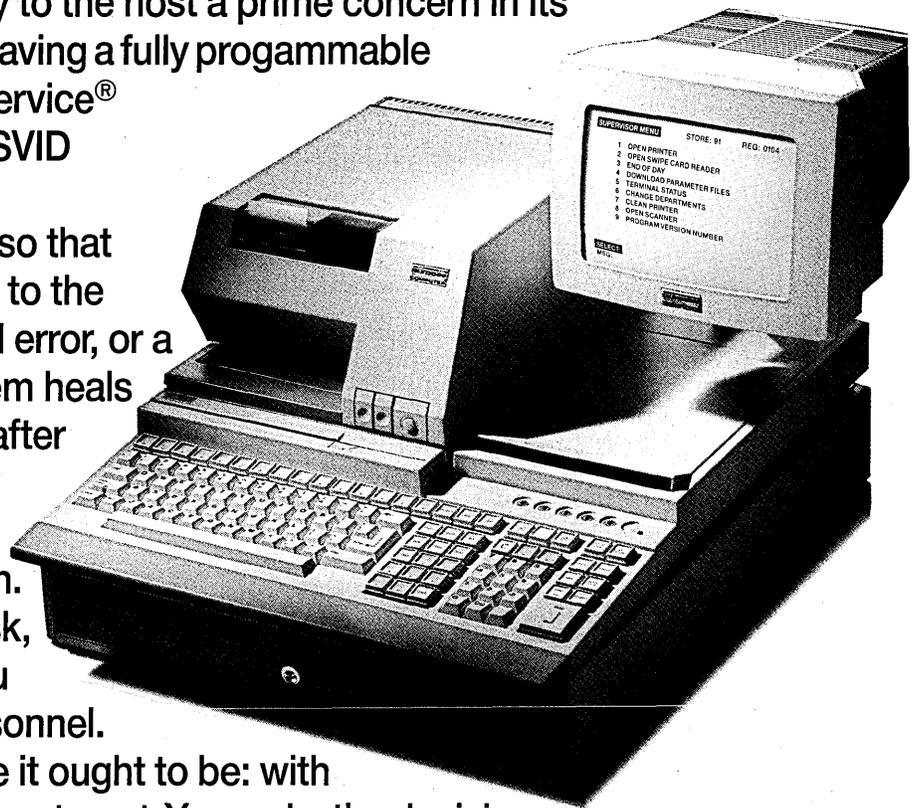

We also provide for a help desk, and remote maintenance, so you aren't forced to rely on floor personnel.

It puts the responsibility where it ought to be: with top management and the MIS department. You make the decisions, and the computer automatically implements them within the programmed guidelines. Management loves it, because stock is always here, ready to be sold. And your people love it.

The Nixdorf 8812 terminal is the smartest register in all of retailing. It increases the capture rate of information to 100%. It is flexible enough for even the most opportunistic tactical retailing. It helps train personnel, and reduces reliance on floor-supervisor intervention.

Best of all, it's completely responsive to management. And totally obedient to you.

Systems software for MVS data centers:

Enter the world of total resource management, total support.

Computer Associates presents the industry's most extensive, integrated software for systems managed storage environments.

CA-UNIPACK™/SRM STORAGE AND RESOURCE MANAGEMENT

Consisting of: CA-1® or CA-DYNAM®/TLMS, CA-ASM2®, CA-BLOCKMASTER®, CA-SORT®, CA-SRAM® and CA-UCANDU®

CA-UNIPACK/SRM completely automates storage and resource management functions in even the most complex data center environments. It provides comprehensive tape and DASD management facilities, sort/merge and file manipulation utilities and comprehensive management reporting.

CA-UNIPACK/SRM optimizes storage utilization, often eliminating the need for costly additional hardware. It ensures data integrity by

enforcing installation-defined storage standards and protecting data resources. It increases data center productivity by eliminating labor-intensive, error-prone tasks, freeing up valuable staff, as well as by reducing job elapsed times through faster and more efficient sorting.

Only Computer Associates has the products and expertise to provide this cost-effective, total solution.

And only Computer Associates offers **CA-UNISERVICE®/II**, a secure link between your mainframe and CA's Customer Service System 24 hours a day. You get online access to software fixes, interactive problem resolution, plus product tutorials and more!

Circle 9 on Reader Card

Big HP Users Care Little For OSF

SUNNYVALE, Calif.—While vendor-dominated groups such as UNIX International and the Open Software Foundation (OSF) continue to do battle to see who will control the definition of open systems standards such as UNIX, users don't seem to be lying awake at night concerned over who will win. **Hewlett-Packard Co.** was a founding member of the OSF and has been a strong advocate for the IBM- and Digital-backed group. But a recent survey suggests that HP users are far from committed to OSF. Interex, the 15-year-old independent HP users group, recently asked 466 HP users whether they were planning to go with the OSF standard, and only 12% said yes. Twenty-one percent said no and a whopping 67% said maybe or don't know. Not a major OSF endorsement from the survey group, 63% of which represent companies with over 500 employees.

The Front Burner

RESTON, Va.—About five years ago, the West German parent of **Software AG** here developed in Germany an object-oriented, entity relationship data base management system. But the folks in Darmstadt didn't think the market was quite ready for such a technological DBMS shift, so they never released the product. Now, however, they believe the market has ripened, and they plan to formally introduce this technology sometime this year. The technology, which runs with Software AG's existing Adabas DBMS, is called, appropriately enough, Adabas Entire. Telefonica in Spain is using Adabas Entire to build a data model for the whole company, Software AG officials say. Meanwhile, Software AG already has plans to extend Adabas Entire with rule-based expert systems technology, which it is also planning to introduce later this year.

The PacBell IS Reshuffle

SAN RAMON, Calif.—If you're an IS worker here at **Pacific Bell Co.**, get those packing boxes ready. The company, which currently serves as a fine example of recentralization, is again tweaking its IS ranks. Almost one out of every 11 PacBell employees is in IS and works in either computer operations, development or planning. Planning had been a distant third (accounting for only 575 of PacBell's 5,430 IS people), but, nevertheless, the Baby Bell is in the midst of reducing that number to about 300. Those cut will be redeployed, says a company official. The reason, he adds, is that the company had reached a point where it has done enough architectural planning, which is conducted by that department.

Round Trip Ticket for IS Labor

HONG KONG—**Cathay Pacific Airways** has joined the ranks of corporations here faced with the irony of rehiring IS staff members who emigrated from Hong Kong, due to anxiety over the British territory's future after it reverts to Chinese rule in 1997. To that end, the airline recently invested several million Hong Kong dollars to open an office in Sydney. "Many of my staff have immigrated to Canada and Australia," explains IS manager Brian Haydon. "We have no trouble get-

ting good graduates here [in Hong Kong], but the rate at which they become useful is lower than that at which experienced professionals are leaving." He emphasizes, however, that Cathay Pacific is not encouraging its employees to emigrate and is rehiring only those with particularly useful skills. He would not say how many Cathay Pacific employees have left for Australia, but so far two have been rehired for the Sydney office.

Notebook PCs On the Shelf

HOUSTON—Texans are known for doing things in a big way, but expect **COMPAQ Computer Corp.** to buck that trend later this year when it introduces a notebook-sized version of its big-selling 286-based laptop computer. Reports currently have the company preparing to introduce the machine late this year. Last fall, **NEC Information Systems Inc.** introduced a notebook-sized computer called the UltraLite. NEC's offering lacked a disk drive, diluting its usefulness. But Compaq's machine is said to incorporate a 3½-inch disk drive.

CASE ISVs On the Spot With CSP

CARY, N.C.—**IBM's** recent and upcoming announcements of an upgrade for its Cross System Product (CSP) fourth-generation language and data repository are putting third-party computer-aided software engineering (CASE) vendors on the spot. Do they pledge compatibility with the IBM products or do they try to establish their own development environments as de facto industry standards? Industry sources say IBM has been trying to get CASE independent software vendors (ISVs) to pledge publicly their plans to support and be compatible with CSP and the repository. Apparently, those that have joined that camp are **Index Technology Corp.**, **KnowledgeWare** and **Arthur Andersen & Co.** Not all vendors, however, see the value in jumping on the bandwagon. Sources say **Texas Instruments Inc.**, for example, declined, instead merely promising support for industry standards as they emerge.

AS/400 Software For Plants

DENVER—New software for build-to-order and repetitive manufacturing applications is due out this year from AS/400 software developer **J.D. Edwards & Co.** The package covers product data management, shop floor control, master production scheduling/material requirements planning and capacity requirements planning. A late fall launch of the data dictionary-based manufacturing software is scheduled. Subsequent software plans call for an early 1990 release of a new version of software engineering programs for the System/38 RPG III language developers, says president Daniel J. Ellis.

A New Path For Harris

SAN JOSE—It may turn out that **IBM's** recently unveiled CallPath system isn't a dead-end street—or so other vendors hope. CallPath is designed to integrate IBM host data applications and telephone call processing from ROLM PBXs. An integral part of CallPath is a program that runs on a

PS/2 personal computer and provides the Systems Network Architecture interface and communications link from the PBX to the host. Sounds pretty proprietary, huh? Well, executives from **Harris Corp.**'s Digital Telephone Systems Division are hoping to open up the product. If so, Harris can use that link in conjunction with its new product, VoiceFrame, which, with a switch and software, links computers and network services.

Is IBM In Caltech's Super Future?

PASADENA, Calif.—**The California Institute of Technology** has seen its supercomputer future, and it looks very much like an **IBM 3090 600-S**. The university has a three-year lease on a used **Cray Research Inc. X-MP/18** for \$1 million, but sources say it would gladly give that up for a 600-S, which would better suit its applications. There's just one slight problem—money. IBM's asking \$10 million for a five-year deal, which is not bad considering that a similar deal on the open market would command some \$35 million. Nevertheless, Caltech is having a hard time coming up with the necessary dollars.

Getting in on Ground Zero

TRUMBULL, Conn.—Groupware developer **Coordination Technology Inc.** has decided to pick three development partners to help fine-tune its initial software offering. The start-up hopes to launch its first release next March. In return for their efforts, the as-yet-unnamed partners will receive first rights to purchasing the software they help develop.

No Use For MBA Degrees

ST. LOUIS—Conventional wisdom says that IS managers with technical backgrounds can boost their careers by earning a business degree. Curt Hartog, director of the Center for Data Processing Studies at **Washington University** thought that, too, until he offered MBA courses for IS managers and was met by a response that he describes as "truly underwhelming." Hartog says there's just no substitute for specific industry know-how, whether it's in health care, petrochemicals, food processing or whatever. "The accent is now on learning the company's business," he says. So, while a business degree looks good on an IS manager's résumé and certainly won't hurt, it may be too general a qualification in these highly specialized times.

EISA PC Exams Planned

NEW YORK CITY—As PCs using the new Intel Corp. 80486 microprocessor move closer to the market, the **486 Standardization Committee** has plans to monitor the compatibility of the new 80486-based machines and their peripherals. In particular, the committee plans to monitor the Extended Industry Standard Architecture (EISA) versions, says committee chairman Brian Livingston. "We originally formed because we were concerned that the bus on 486 systems would become nonstandard, as companies tried to gain a performance advantage." The EISA coalition's announcement that the majority of PC manufacturers would use an extension of the

industry standard architecture decreased that danger, he says. "So when the EISA machines come out at Fall Comdex, we will reopen the question, 'Are all the EISA machines completely compatible with each other and are component boards for different machines interchangeable among different manufacturers?'" Livingston says. The 486 committee also will advise PC manufacturers on the type of 486 PC configurations that would be useful to large corporations, he adds. The 486 Standardization Committee is made up of corporate computer purchasers who buy at least \$1 million worth of PC hardware and software annually.

Opting for Fiber Optics

WASHINGTON, D.C.—Goodbye cable TV, hello fiber optics. That's the way **OPT in America**, a.k.a. the Public Interest Organization for the Information Age, sees it. The group claims it has found the answer to what it perceives to be the country's communications problems. It aims to "raise public awareness of the social and economic benefits that would accompany universal deployment of a switched fiber optic telecommunications system in America." Executive director George DeBakey, the former executive director of the Association of Data-Processing Service Organizations (ADAPSO) is leading a research, video, publications and outreach campaign to spread OPT's message.

An Object Effort Gets C + +

BILLERICA, Mass.—**Ontologic Inc.** has dropped its proprietary language in favor of C++ in a new object-oriented data base. The single-user version of the data base, OB2, is scheduled for release this month; a multiuser version is set for October. OB2 will run on Apollo, Sun or VAX workstations, with plans for OS/2 and VMS scheduled for the end of this year, according to Seaforth Lyle, Ontologic's chief executive officer.

Discounting On the Rise

WESTPORT, Conn.—Discounting **IBM** mainframes is increasing and not likely to peak anytime soon, says **META Group Inc.**, a research and consulting firm. Chairman Marc Butlein says that last year some 1,500 customers received IBM's Special Bid discounts, up from a mere 75 in 1980. What's more, Butlein adds, ever greater discounts can be expected as the 3090 mainframe family approaches its twilight years. The average discount increased even as IBM early this year instituted a 5% price hike to prop up mainframe price tags.

Raw, Random Data

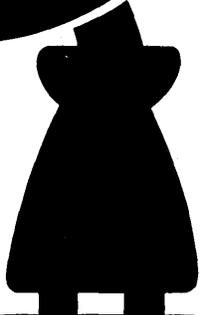

Lockheed Corp. has added a voice capability to the indexing function of a document image-processing application from **Alpharel Inc.** of Camarillo, Calif. The system is being used routinely for purchasing and inventory control. . . . A **FileNet Corp.** customer is using a DEC VAX as a gateway for an image-processing application that sends bills of lading, delivery receipts and weigh bills to its various delivery sites. Ultimately, says Bob Castle, FileNet's vice president of marketing, all of the customer's delivery trucks will have a fax machine.

WASHINGTON, D.C.—Goodbye cable TV, hello fiber optics. That's the way **OPT in America**, a.k.a. the Public Interest Organization for the Information Age, sees it.

BILLERICA, Mass.—**Ontologic Inc.** has dropped its proprietary language in favor of C++ in a new object-oriented data base. The single-user version of the data base, OB2, is scheduled for release this month; a multiuser version is set for October. OB2 will run on Apollo, Sun or VAX workstations, with plans for OS/2 and VMS scheduled for the end of this year, according to Seaforth Lyle, Ontologic's chief executive officer.

WESTPORT, Conn.—Discounting **IBM** mainframes is increasing and not likely to peak anytime soon, says **META Group Inc.**, a research and consulting firm.

DG IBM

**"The Data General difference:
When it comes to being IBM friendly,
we're better plugged in."**

Data General's wealth of IBM® communication and networking products, make it easier than ever to plug the advantages of our ECLIPSE® MV/Family computers into your IBM environment. With minimal risk. And little or no disruption to your existing network.

We offer a wide range of IBM interoperability products for connectivity in both local and wide area networks. To help you access applications and share resources more efficiently.

Connecting is easy, thanks to our asynchronous, bisynchronous, SNA/SDLC, X.25, 802.3, 802.5 and other premier communications products. And once plugged in, you'll enjoy all the power, flexibility and compatibility—1 to 50 MIPS—of our MV/Family computers.

You'll benefit from improved resource sharing, too. DG/3270 and DG/RJE let you access IBM host applications in terminal emulation mode. And, our CEO DXA™ and CEO PXA™ enable you to send mail and messages to IBM DISOSS, PROFS® and SNA/DS environments.

DG-to-IBM communications and networking products are unsurpassed at linking systems in a network. Our APILU 6.2 and NETBIOS (DG/PC*1) provide interfaces between software programs. So applications in your IBM environment can "plug and play" with those on Data General systems.

To find out more, send the coupon below. Or call: 1-800-DATAGEN. In Canada, call 416-823-7830.

DCA Links Macintosh To Mainframe

New Software Dovetails With A

Computing Strategy

BY JOHN THOMPSON

ANAHEIM, CALIF. — Digital Communications Associates Inc. has introduced a software package for Apple Computer Inc. that lets IBM mainframe applications data be accessed on a Macintosh using that system's graphical format. The software package could prove to be a key element in Apple's strategy of providing business communications software for the Macintosh.

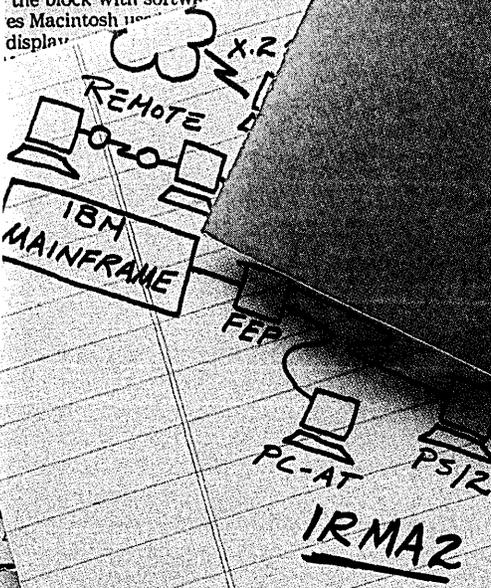

popular graphics software. "It gives Macintosh users the ability to access IBM mainframe data. The package is available on Apple's Macintosh Plus and Macintosh SE. It is priced at \$297.00. IBM mainframe applications data can be accessed on a Macintosh using that system's graphical format. The software package could prove to be a key element in Apple's strategy of providing business communications software for the Macintosh.

PC WEEK

DCA To Bring Mainframe Graphics to Mac

By Jane Morrissey and David

Digital Communications Associates Inc. intends to be the first to bring software that lets Macintosh users access IBM mainframe data to the Macintosh display.

A Pocket Guide to DCA's Workstation Communications

THE MYSTERY MODEL: "IRMA" IS DCA'S

...ment... And un... use, we're going to philosophy.

Who's Winning the Supercomputer Race?

Cray Research's current problems, the demise of ETA Systems and the advancements in Japanese technology seem to spell doom and gloom for the U.S. supercomputer industry. But technologically, the race may not be over yet.

BY WILLIE SCHATZ

In some quarters, the handwringing has begun. Cray Research Inc., the world's foremost supercomputer maker, faltered, then split in two. Control Data Corp.'s anemic ETA Systems subsidiary expired, leaving the industry and the United States at large with only the divided Cray and an IBM-backed start-up, Supercomputer Systems Inc., that is still several years away from producing its first machine. The Japanese, meanwhile, forge ahead with ever faster supercomputers.

Could it be that the United States, the world's leader in computer technology, is losing its edge in supercomputers, perhaps strategically the most important class of computers? Could U.S. industry, particularly in its research and development efforts, be hurt as a result?

A hard look at a technological scorecard shows that handwringing is probably justified in the areas of base technology and raw computing power, if the Japanese are able to deliver the performance in their next generation of systems. But in the critical areas of systems and applications software, sighs of woe may be a bit premature.

Furthermore, installation figures show considerable strength for Cray. Cray has sold 16 supercomputers in Japan, 13 of which have been installed. To date, only three Japanese supercomputers have made it into the United States—an NEC Corp. SX-2,

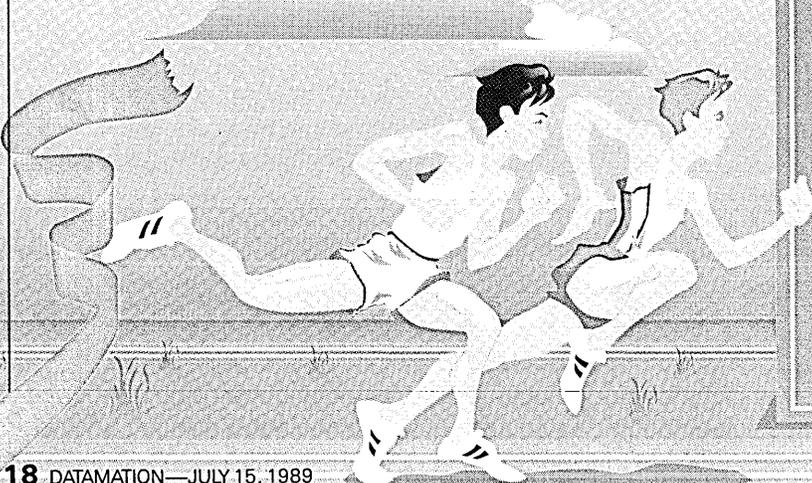

installed at the Houston Area Research Center, and two Fujitsu Ltd. VP-100s installed at the U.S. headquarters of the Norwegian oil company, Geophysical Co.

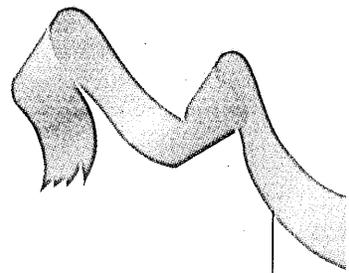

The Japanese Edge

In terms of base technology, the Japanese seem to be in the lead. First, U.S. companies have become

The competition will change

	Cray Y-MP	Cray C-90
Base Technology	Silicon	Silicon
Clock cycle	6 nsec	4 nsec?

Number of Applications	750	750
Availability	1988	1986
Price	\$5-25 million	\$5-30 million

dependent on Japanese component suppliers. For example, Cray employs Fujitsu memory chips in its current generation X-MP and Y-MP supercomputers. Second, in terms of architecture, NEC's SX-X's silicon pipeline construction, which enables the machine to operate in parallel, beats the Y-MP's silicon vector arrangement, which does not allow for parallel processing.

In the important category of speed, the Japanese also seem to be in the lead, especially when the specifications for the coming generation of products are examined. NEC's eight-model SX-X family will first be available in the third quarter of 1990. The highest end SX-X44 supercomputer is expected to perform, theoretically at least, at 22 billion floating point operations per second. This compares with only 2.8GFLOPS for Cray's current top-of-the-line Y-MP and an expected 16GFLOPS for both the C-90 and Cray-3, due out next year.

"If performance is all that matters, I'd choose the SX-X over the Y-MP," concludes Peter Patton, director of technology assessment for the Superperformance Computing Service of the San Jose-based market research company Dataquest Inc. "For starters, it's got a clock speed more than twice as fast [as Cray's machine]. . . . Taking what's out there now, the SX-X is the most powerful machine that is deliverable the soonest." The SX-X will be marketed in the

United States by the Honeywell-NEC joint venture HNSX Supercomputers Inc. of Burlington, Mass.

Cray probably wins in the software arena, but, in terms of operating systems, the lead may not last for long. Cray first came to market with a version of the UNIX operating system, UNICOS, in 1985, but NEC's HNSX may not be far behind. HNSX will make UNIX version 5.3 with 4.3 Berkeley extensions available on its first U.S. machine.

UNIX Is Key

Still, at present Cray has a head start in the form of its installed user base. Of the 220 Cray supercomputers installed in the world, 70 run UNICOS—but 120 run the proprietary Cray Operating System (COS) and 30 run the proprietary Cray Time-Sharing System (CTSS), an indication that there is much room in Cray's user base for migration to UNIX. And currently, the three Japanese suppliers—NEC, Fujitsu and Hitachi—offer only proprietary operating systems.

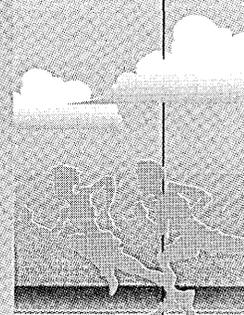

And Cray may be able to capitalize further on its

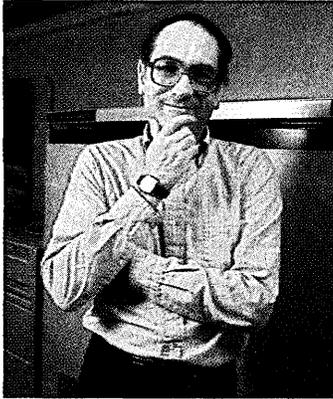

The Field of Super Contenders

considerably in the early 1990s when several new machines appear

Source: Dataquest Supercomputer Company; Cray Computer Works Laboratory

U.CAL.'S SUGAR says the Japanese must follow the UNIX route in the U.S.

initial UNIX advantage, depending on what enhancements NEC incorporates with its UNIX offering. "If NEC brings up pure UNIX [a basic version without extensions], it's going to be a problem for people who run supercomputer centers," says Chuck Fox, assistant director of the San Diego Supercomputer Center (SDSC), citing accounting and job management problems with pure UNIX.

For some users, any version of UNIX is a good version. "U.S. companies are going to UNIX rapidly, and I think the Japanese have to do the same," adds Robert Sugar, professor of physics at the University of California in Santa Barbara. "It's going to be a great day for me as a user if everyone settles on one operating system. And I don't care which one it is."

The vendors probably don't either. Having achieved considerable penetration of its user base with UNIX, Cray isn't about to stop now. That means HNSX doesn't have much choice if it's ever going to hit a U.S. home run. So the company's running native UNIX on an NEC SX-2 in Tokyo and is planning to port it to the SX-X on an arithmetic processor. HNSX is also using the SX-2 to develop UNIX extensions.

Providing the right operating system doesn't mean clearing the applications hurdle, though. Cray seems way ahead in this area, although Dataquest's Patton is not sure that strength in applications is necessarily money in the bank for Cray.

If the technological issues are complex, the politi-

cal ones are downright Byzantine. The only U.S. entity barred by law from buying a Japanese supercomputer is the Department of Defense, which must purchase only U.S.-made supercomputers. But that law might as well list every other potential U.S. customer because none has violated a de facto boycott of Japanese machines.

The Political Freeze

The technological implications of such a freeze out of Japanese machines are uncertain, but some feel that users will be put at a disadvantage eventually. "To the extent that we're not importing technology from Japan—such as the Hitachi S-820 line of air-cooled supercomputers, which the U.S. doesn't have—it is to our eventual disadvantage," says Sid Karin, director of the SDSC.

So what's the United States doing about it? Not much. At press time, Japan was among the countries targeted for a "Super 301" trade sanction, the maximum penalty under the 1988 Omnibus Trade and Competitiveness Act. Having lost large chunks of the memory chip market to the Japanese, the United States isn't anxious for a supercomputer sequel, particularly as supercomputers are not only important as a market in themselves but as the means to developing other technologies and products. "It's not a good position to be dependent on your competition for real value added or product differentiation . . . something fundamental to what your customers are trying to accomplish," warned CDC chairman Robert Price at a press conference the day after ETA died.

Despite such protectionist concerns, there is some evidence that the supercomputer political climate

Supercomputer Developments in the Soviet Union

While much of the world focuses on the supercomputer competition between Japan and the United States, developments in supercomputers and related architectures are going on in other countries. And some of the most potentially significant ones, particularly in the space exploration and defense realms, are occurring in the Soviet Union.

When the Soviet space shuttle Buran lifted off last November, an Elbrus-2 supercomputer was used to manage and control the mission. Although not in the Cray class, the Elbrus-2 is just one of 10 major supercomputer developments in the Soviet Union, DATAMATION has learned.

The 10 projects are:

- Continuing research into the Elbrus family of computers at Lebedev Institute in Moscow;
- Research into Cray 1-class supercomputers at the Institute for Cybernetics Problems in Moscow;
- Development of the PS2000 and 3000 vector processors at the Control Problem Institute in Moscow;
- Work on parallel-processing at Moscow State University;
- Research into macro-pipelining architectures at the Institute of Cybernetics in Kiev;
- Development of the MARS-M supermini in Novosibirsk;
- Development of the ES2703 fine grain parallel processor at Radio Engineering Institute of Taganrog in the Ukraine;

- Development of the ES2704 fine grain parallel system at the Informatics Institute in Leningrad;

- Study of array processors, superminis and shared memory techniques, in cooperation with Bulgaria.

- Research into fault tolerant computers, thought to be continuing at the Spaceflight Control Center in Moscow.

While the West is heavily into GFLOPS, the Soviets are just starting to creep into the upper hundreds of MFLOPS. The Soviets have some basic technology problems, particularly in chip technology, that they acknowledge but are working to improve.

Soviet President Mikhail S. Gorbachev's chief scientific adviser, Soviet Academy of Sciences vice president Yevgeny Velikhov, told DATAMATION that the Soviet Union lags behind the West in its ability to mass produce very large scale integration (VLSI) processor and memory chips in the quantities needed to achieve volume production targets.

But Velikhov refuses to concede that the Soviet IS industry is dependent on the West and claims that the technology trade embargoes of the Reagan era have merely driven his country toward greater self-sufficiency.

And they are moving ahead, given the current number of Soviet projects and the Soviets' considerable technological advances since they reduced their reliance on a serviceable but obsolete class of supercomputer called the BESM-6. This ma-

may be warming slightly. "There's been a lot of discussion about it [the wisdom of keeping out the high-end SX-X44]," says Bob Borchers, associate director for computation at Lawrence Livermore National Laboratory, which has been prevented from obtaining a Japanese machine by the Department of Energy's de facto boycott. That policy is currently under review pursuant to the DOE's commitment to conducting open procurements for its supercomputers. The Japanese will find out next summer if the DOE means what it says when the agency releases its first procurement since the SX-X announcement.

"I'm urging DOE to face the issue up front," says Borchers. "I don't want to have HNSX win the contract and then sit for two years while politics holds things up.

Adds Karin: "The industries that use supercomputers are far more important than [the issue of] who builds the machines. . . . How important it is to have a domestic supplier is open to debate."

Cray Against the World

Meanwhile, the debate about the health of the domestic industry also continues. ETA's death removes one competitor from the supercomputer scene. A prospective competitor on the horizon is IBM, which has invested in Supercomputer Systems Inc. of Eau Claire, Wis., started by former Cray designer Steve Chen in 1988. SSI, however, is not expected to roll out a machine until 1993.

chine is the computing backbone of the Soviet's successful manned spaceflight program.

In recognition of the throughput limitations of the BESM-6, development started in 1978 on a 10-multiprocessor system that would be able to offer up to 10MIPS, 10MB of main memory and a word length of 64 bits. Called the Elbrus-1, the computer encountered problems and never went into production. In 1984, the design was changed, and the machine was relaunched as the Elbrus-2. A fully configured Elbrus-2 cluster with vector processors can achieve around 200MFLOPS.

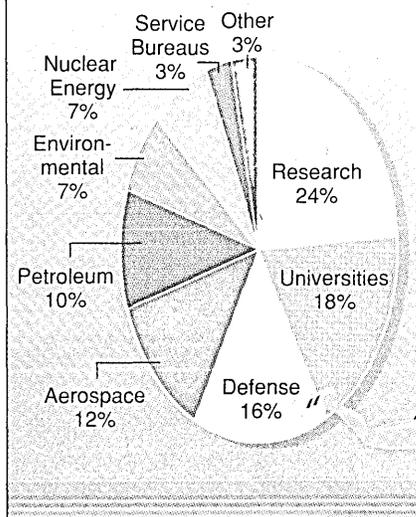

The Soviets loathe revealing production numbers, but DATAMATION's sources have learned that at least 10 Elbrus-2s, and possibly as many as 20, have been installed. One is at the Moscow Spaceflight Center, where it is currently managing the unmanned "Phobos" Mars probe. According to academician Oleg Belotserkovsky, director of the CAD Institute at the Academy of Sciences in Moscow, an Elbrus-3 will show up next year and an Elbrus-4 in 1995.

But the Soviets' most significant moves appear to be in the development of specialized processors and neural computing. Specialized processors, such as the PS2000/3000 and ES2706, can be plugged into a variety of host CPUs. Work on these parallel systems may prove to be the most fruitful of all Soviet developments. But until they cure their manufacturing and semiconductor ills, only the military and space sectors will benefit.

-By DATAMATION correspondents

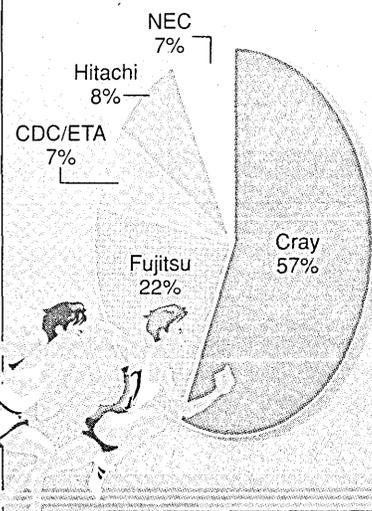

Where Supercomputers Are Used Worldwide

Research institutions are by far the biggest users of supercomputers.

Not Surprisingly, Cray Is the Market Leader

But combined market share for the Japanese adds up to 37%.

Source: Argonne National Laboratories.

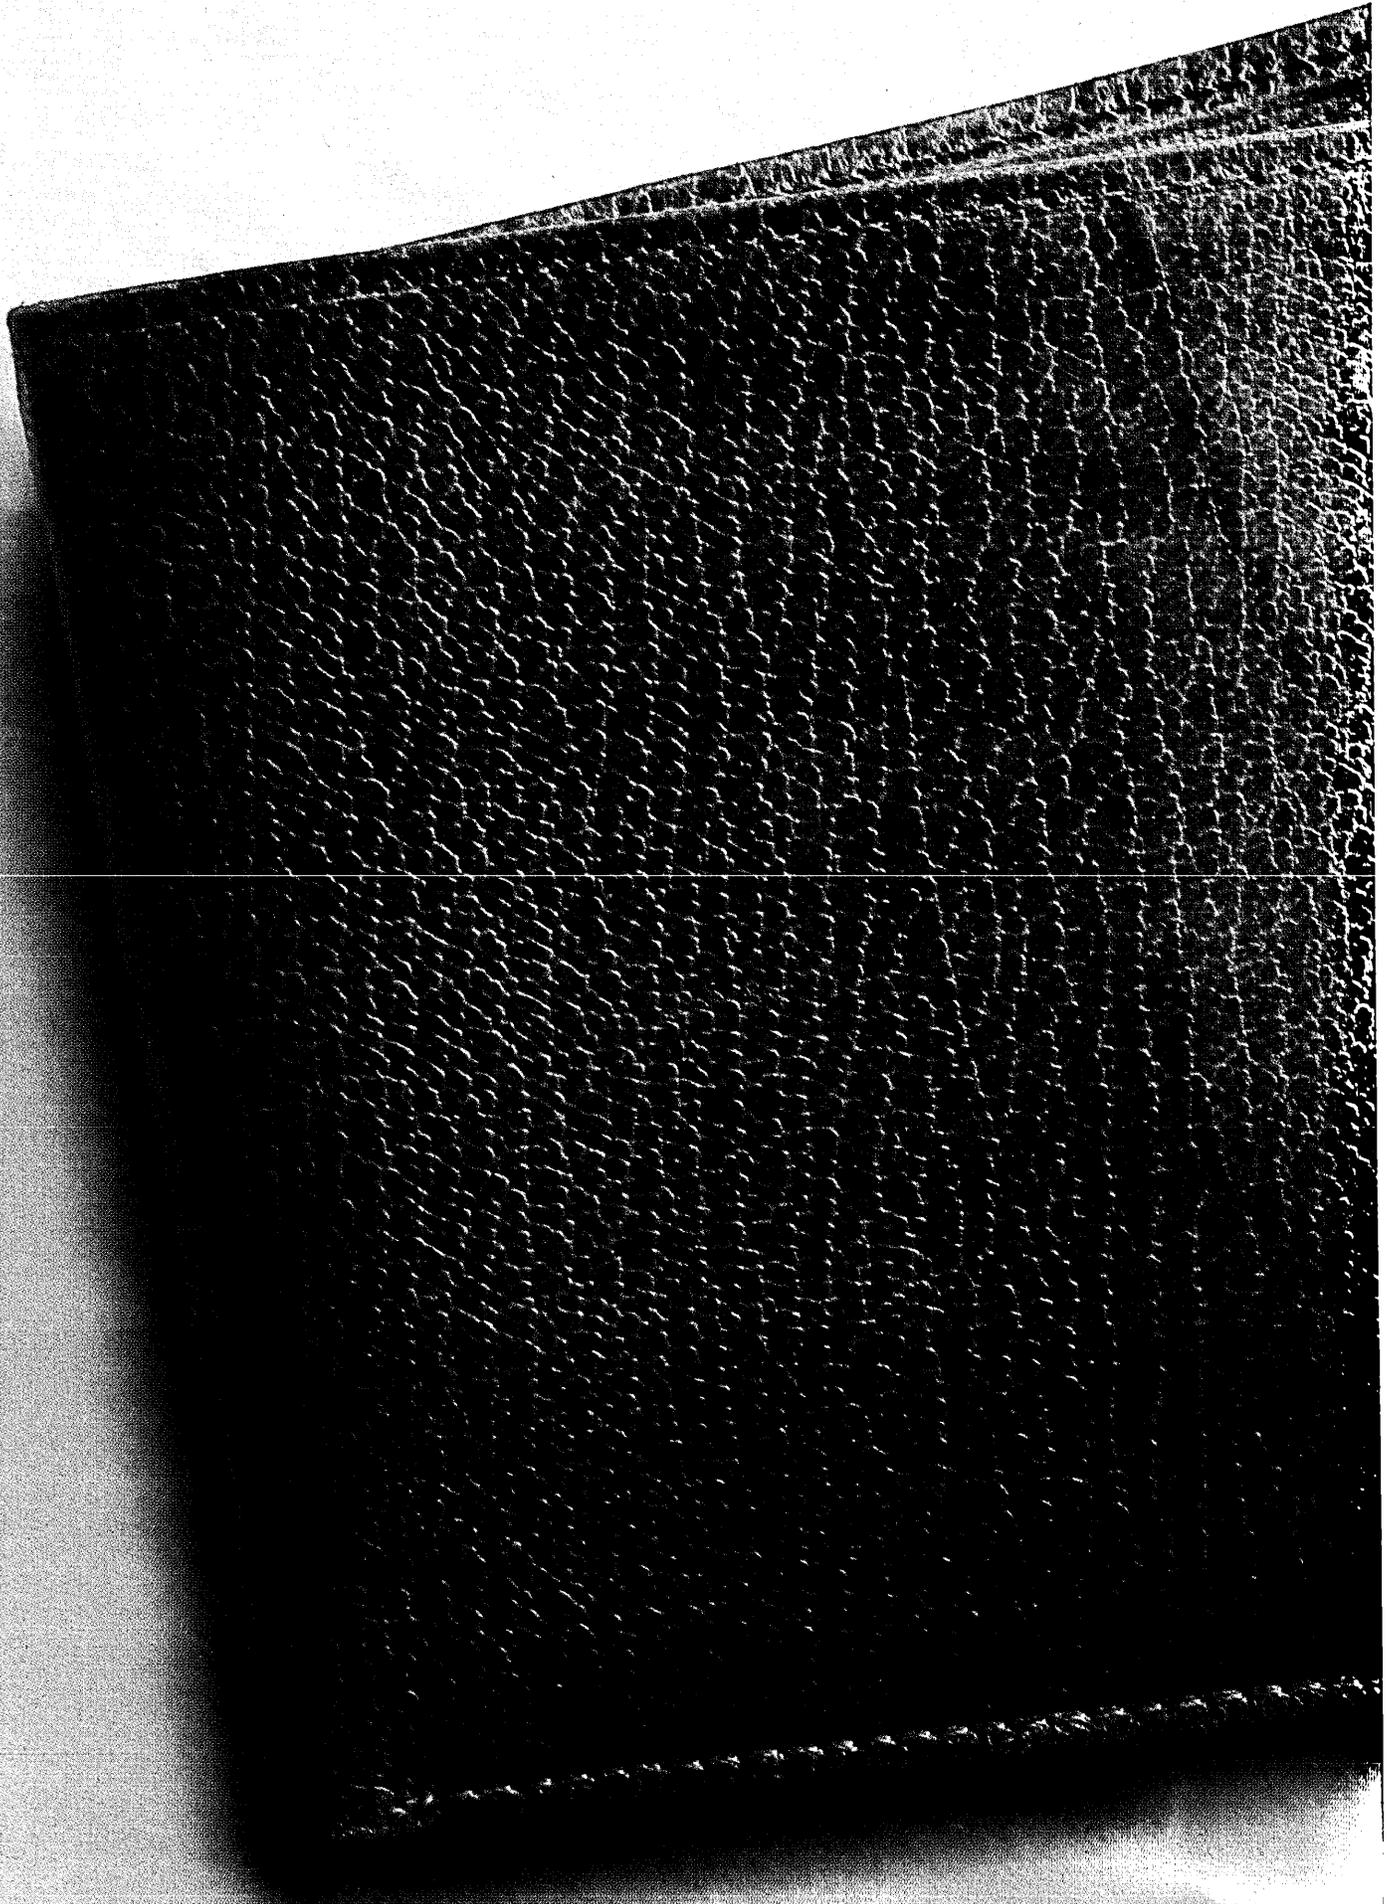

That leaves Cray, which is having both financial and technical troubles. Cray reported a 94% decrease in first-quarter revenues, producing an operating loss of \$1 million. On the technical side, problems with the gallium arsenide chips that will power the Cray-3 have delayed its release by about a year. The Cray-3 is now being developed by Cray Research's founder, Seymour Cray, at the company that was split off from Cray Research—Cray Computer Corp. of Colorado Springs, Colo. The Cray-3 is now expected sometime in 1990. Cray Research's upcoming C-90, which relies on silicon-based chips, is also expected next year.

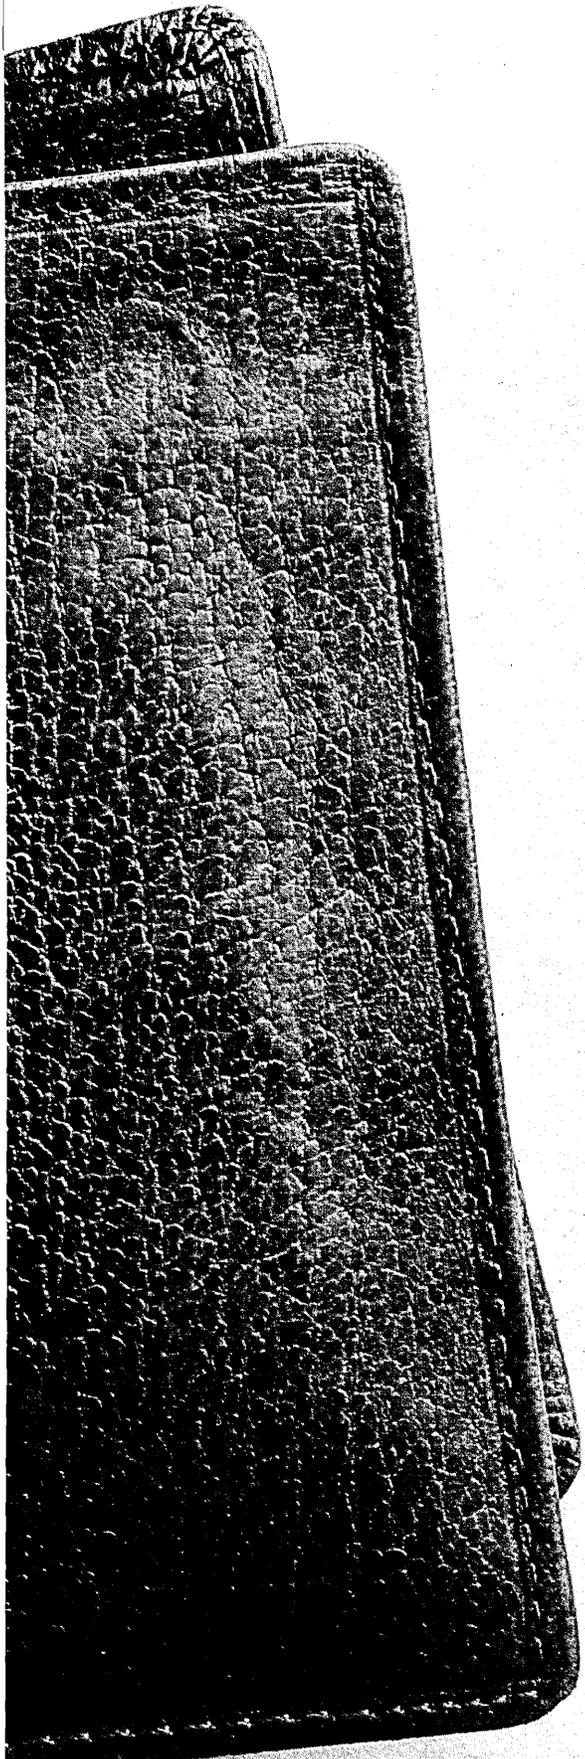

So, whether Cray is considered one company or two, it remains a de facto monopoly in the United States. But perhaps not for long. NEC may be planning to start manufacturing the SX-X family at Honeywell's plant in Phoenix. According to a knowledgeable source, such a move has already been presented by HNSX president Jim Berrett to the Energy Department if the DOE would agree to accept the first SX-X off the line.

While the conclusion of the supercomputer race may still be an open question, some observers see important implications in the fact that the race has become so close.

"How did supercomputers become equivalent to the snail darter?" asks Samuel Adams, vice president of marketing at HNSX. "Because U.S. companies lost their semiconductor lead, spent nothing on R&D and were satisfied with what they had. It got to the point where critical technology wasn't practical to manufacture in the U.S."

"This is like a relay race," adds Dataquest's Patton. "Japan's won the third leg. The U.S. is going to run awfully damn fast to catch up before the finish line."

With Masterpiece There's Only One Other Piece Of Financial Software You'll Ever Need.

The promise of financial accounting software is realized at last. Masterpiece® is 21st century financial management for the entire corporation. From the data processing room to the executive suite.

It's comprehensive. It's fast. It integrates all your data and puts it into the most accommodating user environment you'll ever work in.

For those at the top, Masterpiece provides information with speed and accuracy. Decision making becomes easier. Data is disseminated company wide at your command. Profit forecasts are at your disposal quickly and easily. You've got state-of-the-art graphics to help present your case. And more importantly, you suddenly have the powerful sensation of knowing where you stand at any given moment.

Masterpiece is not business as usual, but business as it is about to become. For IBM Mainframe, Midrange and Digital VAX environments, it's the financial software of the future—that's available today.

For more information call Chris Andrews at 800-841-3734 (in Calif., 800-468-0725). And find out what 21st century financial software can do for you.

Software superior by design.

NOMAD helps 3M put thousands of health care products in the right place at the right time.

Surgical tapes and dressings. Drapes and surgical masks. As essential to a hospital as a surgeon's skillful hands.

And thanks to 3M's strategic alliance with Abbott Laboratories, which provides an electronic ordering system stretching nationwide, these and thousands more items are delivered quickly and at lower cost to hospitals, when and where they're needed. Making 3M one of the largest suppliers to the health care industry.

Hospital staff can place orders by computer, or simply by picking up the phone. It's all part of 3M's commitment to serving its customers better. And it's why this electronic order entry and product delivery service is so critically important.

At the heart of the system is NOMAD, the powerful 4GL chosen to link 3M's corporate systems with the electronic

network. It is a complex linkage handling a multimillion-record database where orders placed by more than 2,000 hospitals are translated to 3M systems. The application performs with reliability and efficiency, thanks to NOMAD's rich, comprehensive language.

At 3M, NOMAD's reputation for technical excellence is well-known. For the corporate data processing group, NOMAD is the recommended product for end-user computing. And as 3M's billion-dollar business sectors have installed their own mainframes, NOMAD has also been installed. NOMAD is currently used by four different groups within 3M.

All of which underscores the value received from NOMAD technology—and from the ongoing teamwork over the past five years.

To learn more about 3M's use of NOMAD, or for a demonstration that illustrates NOMAD's partnership role at companies like yours, call 1-800-441-MUST.

IBM's VSE: A Victory for the Techies?

IBM isn't thrilled by the dogged loyalty earned by DOS/VSE. But Big Blue is making conciliatory moves toward DOS diehards.

BY RALPH EMMETT CARLYLE

William Gehring saw the future: machines pushed to the limit, maxed out to within an inch of snapping, patched and partitioned to death—jury-rigged systems running under an operating system that seemed to him to have no future.

Back in 1986 it seemed obvious to Gehring, vice president of management information systems at Foster & Gallagher Inc. in Peoria, Ill., that IBM wasn't committed to his company's mainframe operating system, DOS/VSE, and was not improving it at a rate that inspired confidence. Like other high-growth companies, his direct-marketing and mail-order concern had been targeted by IBM for migration to its flagship operating system, MVS, which the computer giant liked to call the door to a bright future.

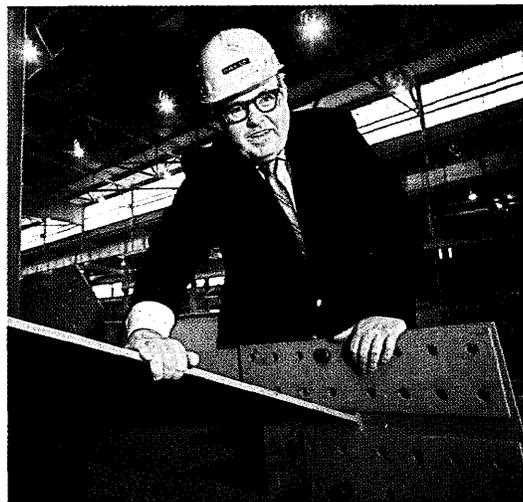

Such pressure brought on a crisis in Gehring's thinking. What was his solution to be? On the one hand, VSE extensions could be squeezed out of IBM; indeed, innovative customers constantly came up with their own, which they willingly shared at no fee. On the other hand, MVS—no jury-rigging here—was designed to get the maximum out of mainframes and make more efficient use of the larger processors that were yet to come. IBM claimed that MVS would be automated to the point that customers could run peopleless, or lights out, data centers, leaving IS executives to focus on their business.

Gehring had heard stories of how horrifyingly expensive MVS was and how its

adoption would cause traumatic change in his 4381-based MIS department. Like many of his peers in the VSE community, he had an acute case of conversion fear and had been postponing a decision. He was still fearful when IBM offered his company a chance to beta test new "big bang" migration software, so called because of the intensity and short duration of the conversion process. But Gehring decided to bite the bullet. Technically, he says, it came down to either patches or props for VSE or the uncharted waters of MVS.

"But that wasn't the clincher," he remembers. "What it all boiled down to were business, not technical, considerations. Foster & Gallagher was growing at 25% a year compound, and we had to position the MIS department in such a way that it would be responsive to such growth."

Gehring figured the costs of staying with VSE (and jury-rigging) or migrating to MVS were about even. But, two years after his conversion, he admits that he was wrong. "We've had to hire more MVS specialists than we'd anticipated—seven as opposed to two, for example." Nevertheless, the IS executive is convinced he made the right move. "We have the IS avenue for growth we were searching

CAROLINA STEEL'S RICE: IBM isn't about to mess with 30,000 DOS/VSE customers.

for," he concludes. "We don't impede the business side of the house as much as we used to and can be a useful partner."

IBM reached some conclusions, too. The company assumed that Gehring was representative of its DOS/VSE base. When details of the giant's designated umbrella for strategic software products, Systems Application Architecture (SAA), emerged in 1987, DOS/VSE had no part in the grand scheme. Like an ugly duckling, it was excluded from the family of SAA-based operating systems: MVS, VM, the System 3X group OS and OS/2. This strategy could only have been reinforced

SOFTWARE MIGRATIONS

by merger mania and corporate insistence on a simpler IS operating environment and fewer operating systems.

Gripped by conversion fears, a number of large corporations had opted for horizontal growth for their installations. Using VM as the control program, they kept adding more and more DOS/VSE licenses as guests running under VM rather than leaping into the unknown. One large, New York City-based organization took jury-rigging to the point of absurdity—some 250 DOS/VSE licenses under multiple VM hypervisors, according to one source—and is just now migrating to MVS in an effort to achieve a single-image system for end users.

There are also stories from consultants about corporations with 20 or more DOS/VSE data centers now busily consolidating around a few mega-MVS centers. Such tales are doubtless comforting to IBM strategists who have relegated DOS to the status of an also-ran. But this doesn't tell the whole story.

Growing evidence suggests that IBM has been forced to re-examine its position on DOS/VSE. Highly vocal DOS diehards are surfacing all over the industry. They're refusing to allow their operating system to become an IBM sideline, and they are insisting on parity with IBM's so-called strategic offerings. Further, they've been making gains and squeezing concessions out of IBM: a prelude, the more optimistic DOS supporters believe, to the elevation of their operating system to the more Olympian heights currently enjoyed by VM.

Over the past year IBM has:

- Offered the first native mode support for DOS/VSE on a 309X class large mainframe—albeit under a hardware-based implementation of VM;
- Shipped or announced an unprecedented three new releases of the OS, adding many new functions—for example, offering as official IBM products customer-created enhancements such as a "code patch," which extends VSE's maximum virtual storage capacity from 40 to 128 megabytes (see "Orphans of the Storm," March 15, 1988, p. 69);
- Introduced an SAA programming interface for CICS under DOS/VSE, which, in essence, positions the VSE-based mainframe as a remote software development and distributed-processing node to giant MVS-based data centers;
- Dropped its tactics designed to hustle customers into VSE-to-MVS migrations and adopted a more supportive attitude toward VSE. (This, according to sources from the IBM user group GUIDE and con-

Migrations From DOS: Some Tips From the Experts

If you're planning a migration from VSE to MVS, prepare for some hidden costs and a few shocks you've probably not thought about. "The cultural change is the biggest eye-opener of all when you move to MVS," says Bert Walker, president of Caterpillar Information Services. The Peoria, Ill., concern should know: it converted all but three of its 30-odd plants and all its dealers from VSE to MVS. The company's technicians got so good at making the migration that they were spun off as an independent business unit early in 1988.

"By the time they move to MVS, your MIS staffers will feel that they've had a frontal lobotomy," quips Walker, who adds that the process isn't funny when it's occurring. For technicians accustomed to the "Dumb Operating System," MVS comes as a great shock. "With DOS it's people controlling relatively low-tech technology. They create the partitions; they make the software dance to their tune. With MVS it's different," he says, noting the well-known interpretation of those three letters: "Man Versus System." Here the system takes over, does the scheduling and increasingly turns all of the people into adjuncts.

"All, that is, except a cadre of highly skilled and highly paid MVS specialists," says Walker, who notes that the best of these specialists can sometimes earn more than the MIS director, and neither training nor added salary costs are often factored into planning.

Walker warns that much attrition will occur. "After months of training, your newly created MVS staffs suddenly discover how employable they are on the outside. Many will jump ship." Look out, says Walker, if you live in popular East and West Coast locations characterized by high staff turnover. Caterpillar doesn't have that problem, since its Peoria, Ill., location in the heart of the U.S. Midwest isn't exactly high fashion.

"Always remember," says Computer Associates' conversions products manager Jim Byrne, "that conversion software is disposable software (unless, of course, you can get into business like Caterpillar). Throwaway money. Your investment is in the target environment, and you should know exactly what you're getting into."

Byrne claims that the disposable nature of conversion resources makes renting or buying a solution on the outside preferable to doing it yourself. It's ironic that if CA boss Charles Wang gets his way, and software platforms that de-emphasize the differences between operating systems take hold, Byrne could be out of a job. Such are the vagaries of the computer business.

firmed by an informal DATAMATION poll of about a dozen VSE accounts.)

A report published in late 1987 by GUIDE listing many of IBM's shortcomings in the VSE arena and a more belligerent, united-two-stand approach from customers are two of the forces that have made IBM re-examine its position. But perhaps the greatest trigger was IBM's 9370, Big Blue's much-hyped "VAX killer," which debuted in 1987. IBM insiders had expected 70% of the machines to run VM (a number not confirmed by IBM official spokespersons), and they were amazed to find that VSE was at least as popular a choice at established accounts as the strategic VM. The upshot is that MVS customers are now demanding that their existing VSE-based 9370 nodes be provided with more SAA interfaces.

"IBM was really taken by surprise," says Michael Braude, a vice president at the Gartner Group research house in Stamford, Conn. "This unexpected show of support for VSE really threw a wrench into their plans."

Rather than shrinking, as IBM had hoped, its DOS/VSE base is actually growing. If Braude is right, the base is expand-

ing at 12 or 13% a year. Gartner and other research companies put the base at some 28,000 licenses and 20,000 installations worldwide, just a shade behind VM, the most widespread IBM OS. IBM's senior product administrator for DOS/VSE, Bob Wilson, says he's comfortable with those numbers.

IBM must now come to terms with the (formerly) unthinkable: more customers want to get on the DOS roundabout than get off. When you consider that MVS customers spend an average of six or seven times more for the software licenses than VSE equivalents (according to GUIDE) and, in addition, require much costlier hardware, the hale and hearty condition of its venerable 23-year-old DOS and its descendants—VSE came along in 1980—is a big blow to the Big Blue exchequer. The migration of thousands of VSE customers to MVS would add billions of dollars to IBM's coffers, but apparently the best IBM can hope for is hundreds per year for the foreseeable future. Jim Byrne, conversions products manager for Computer Associates International Inc. in Garden City, N.Y., estimates that no more than 500 customers world-

wide migrated from DOS/VSE last year. IBM wouldn't divulge its own figures.

Is DOS's resilience a victory for the techies who refer to the software as their "Dumb Operating System" and, like so much clay, mold it to suit their will? Are they now bending IBM to suit their will, too? "We're pressuring IBM to offer us full SAA-compliance for VSE applications running under VTAM and CICS, the two interfaces programmers most see when developing applications," says Pete Clark, a veritable one-man technology group at portrait photography firm Olan Mills Inc. of Chattanooga, Tenn., where he functions as systems programming, database and data communications administrator. He believes IBM will oblige, just as it is currently doing, by working with customers to create a private address space for VTAM, freeing up more available address space to mount extra CICS applications.

Clark and other more vocal DOS advocates also expect IBM to legitimize a new 15-partition VSE design created by a customer in Sacramento, Calif. (a partition is an address space in which customers can mount a new application). IBM currently supports only a 12-partition limit.

Do these victories point to a change of strategy by IBM? Computer Associates' Byrne thinks not. "IBM is offering sops: small incremental improvements. This is the price the company must pay to keep its client base happy." IBM's Wilson says nothing to counter Bryne's view that DOS/VSE "is, and always will be, a 370 architecture for the small and midrange customer." If you want the extended addressing that supports such sophisticated applications as image, voice, video and emerging relational database technology, then as Wilson puts it, "MVS is the operating system for you."

Charles Rice, MIS director at Carolina Steel in Greensboro, N.C., has been with DOS since the late 1960s, when it was resident on a puny 64K machine and took up a mere 4K of memory. Today, his DOS/VSE takes up 512K of memory out of the 16MB of real memory available. "When we've pushed for enhancements, we've gotten them," he says simply. Rice sees no reason why IBM won't push through the current architectural limit if customers demand it. "You don't mess with a base of 30,000 customers, do you?"

Given their recent gains, the DOS techies could be capable of anything—even pushing IBM beyond the current 24-bit architectural limits supported by VSE. But as Foster & Gallagher's Gehring ex-

plains, the DOS/VSE techies may be better at fighting IBM than tackling their own management. Olan Mills' Clark concedes that top managers often buy into MVS over the objections of technical staffs and MIS directors. He cites one case, a midsized concern in the western states that produces and retails its own commodity—like Foster & Gallagher, a high-growth company targeted by IBM for migration.

"Though opposed to the idea, top officers forced the MIS director to migrate, an exercise that consumed four people, 18 months of time and some \$2 million," asserts Clark. "Now at MVS, and paying almost seven times more per month for software, the company doesn't feel that the IS department's responsiveness to business needs has improved one iota."

LARGE USERS UNEXPECTED SHOW OF SUPPORT FOR DOS/VSE ON 9370 TOOK IBM BY SURPRISE.

While IBM seems to have backed off its old migration pressure tactics, the company is doing nothing to dispel the notion that its upcoming relational data dictionary and repository and related SAA-based CASE tools are reserved only for its elite operating systems. IBM's Wilson wouldn't comment, but Computer Associates' Bryne anticipates the move and says it will reinforce the perception that VSE is on the outside.

Clark and his DOS peers say they will continue to carry on the fight, even though they are heartily sick of constantly having to defend the operating system. "It takes away so much time from the job we're paid to do, namely, squeezing the most work out of our production machines as we can."

Though macro trends such as consolidation and merger fever appear to be working against the DOS community, one coming trend may work to its advantage: portability. Computer Associates is intent on providing the SAA bridging and interfaces that VSE customers need. CA's plan is to provide high-level business interfaces that make academic any differences between IBM operating systems. Put another way: if IBM won't support DOS/VSE in an SAA world, CA will. Other software and DBMS companies have begun to pursue similar strategies.

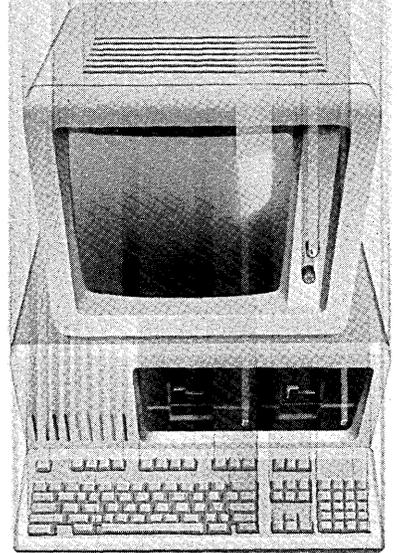

Of course, such software won't be expensive, and as Clark notes only half in jest, "We'll all end up CA's prisoner instead of IBM's."

NO ONE CAN AFFORD DOWNTIME

SIMPLE SOPHISTICATION FOR THE PC WORLD.

The V-series Smartmodem 9600 with V.42 or X.25 Standard.*

The Hayes V-series™ Smartmodem 9600™ brought a technical sophistication to the high-speed dial-up world that had rarely been seen before.

The V.42 protocol, for point-to-point communications, automatically detects errors and then retransmits the data correctly. While the X.25 protocol not only offers error-control but also multisession access to value added networks with expanding applications for dial-up X.25 point-to-multipoint communications.

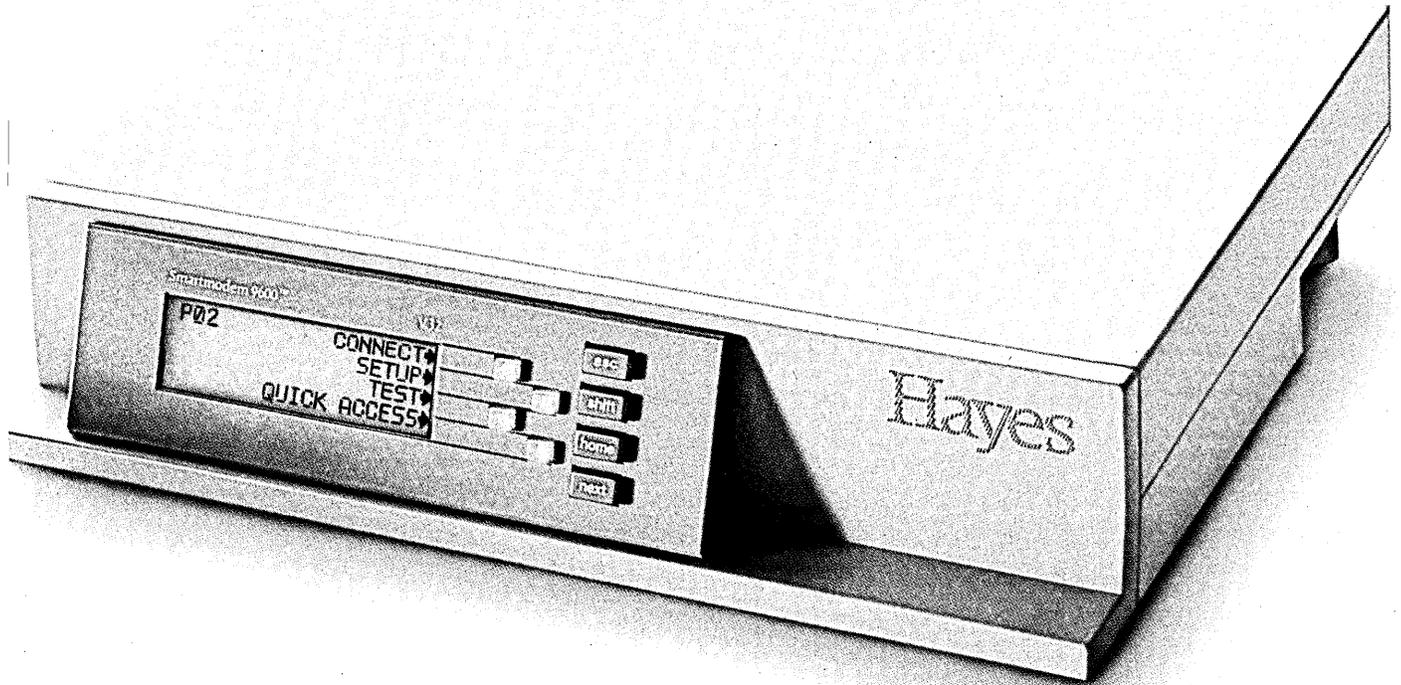

With adaptive data compression, the modem has the capability to double throughput to up to 19,200 bps.

And with Hayes AutoSync, it provides both synchronous and asynchronous communications without the extra expense of a synchronous adapter card.

The Hayes V-series Smartmodem 9600 has a sophistication that not only sets it apart from other PC modems, but above them as well.

*There will be a minimal charge of \$50 for either a V.42 or X.25 upgrade on products purchased before October 1, 1988. Products purchased on or after October 1, 1988 will include either standard as they become available. For details call Hayes Customer Service: 404-441-1617.

SOPHISTICATED SIMPLICITY FOR THE MAINFRAME WORLD.

Introducing the Smartmodem 9600 for V.32 communications.

The new Hayes Smartmodem 9600™ brings the simplicity of the PC world to the complex world of wide and local area networks.

For host to host, host to LAN, and data processing centers to remote controllers, the new Hayes V.32 modem gives full-duplex, synchronous and asynchronous communications at 4800 bps and 9600 bps using dial-up or leased-line circuits.

The modem also offers features like automatic leased-line restoration, automatic dial backup and forward error correction to ensure reliable data transmission. An intelligent front panel with an LCD readout puts this array of features at your fingertips. While behind the modem, the Hayes Cable Management System lets you easily install it flush against any wall or cabinet to save space. The Hayes Smartmodem 9600. We're **Hayes** not just entering the mainframe world, we're improving it.

For your nearest Hayes Advanced Systems Dealer, call 800-635-1225. Hayes Microcomputer Products, Inc., P.O. Box 105203, Atlanta, GA 30348.

Muddy Waters

A surprise for Lotus users—dual 1-2-3 upgrade paths—prompts many to revisit their migration strategy. The heretofore undisclosed release 2.2 casts some plans adrift.

BY BOB FRANCIS

Richard Wonnell feels like he's waist deep in Big Muddy as he ponders the new spreadsheet choices before him. As personal computer coordinator for VF Corp.'s Wrangler Division, Wonnell is one of many now reassessing his plans in the wake of Lotus Development Corp.'s decision to launch dual 1-2-3 spreadsheet upgrades.

Wonnell—like thousands of others who waited as Lotus twice delayed upgrades of 1-2-3—is no longer so certain of his company's spreadsheet course. Two upgrades—the long-awaited release 3.0 and a surprise addition, release 2.2—wasn't exactly what anyone had expected.

Wonnell and many other longtime Lotus users say that release 2.2 is the least costly upgrade, but it won't be generally available until September. So Wonnell at the Greensboro, N.C.-based jeans maker, which waited two years for the delayed 3.0 upgrade release, now waits to compare it with release 2.2, a version tailored to the smaller memory size of first-generation PCs. And, Wonnell is by no means alone. Many of the PC and IS managers who made 1-2-3 a virtual corporate standard are midstream in their spreadsheet plans.

"It's a complex and difficult decision," says Jeff Knepper, director of advanced technology at Touche Ross & Co.'s tax division in Washington, D.C. "Before [release 2.2 was announced], it was much simpler. Then, your choices were: stay put, change to release 3.0 or go to a third product. Now, you've got four choices. It makes the decision either very complex or very easy. If all you've got is [first-generation] 8088 machines, it's pretty easy. For those who don't, it's much more complex. Most of us are in that boat," he says.

The two 1-2-3 upgrades create separate versions appropriate to different PCs, depending on the nature of their microprocessors and graphics adapter support. Lotus is targeting release 3.0 for relatively newer PCs incorporating the Intel Corp. 80286, 80386 and 80486 microprocessors. Release 2.2, which contains some new ease-of-use features and other enhancements, accommodates the smaller memory size of first-generation PCs.

File Formats Differ

But, there are other considerations. Architecturally, release 2.2 is a direct successor to the widely used version 2.01 and is compatible with the hundreds of third-party add-in packages. In contrast, release 3.0 is written largely in the portable C language. Although compatible with the 2.01 version in terms of data and functions, release 3.0 includes a new file format that prevents it from being used with existing 1-2-3 add-in packages.

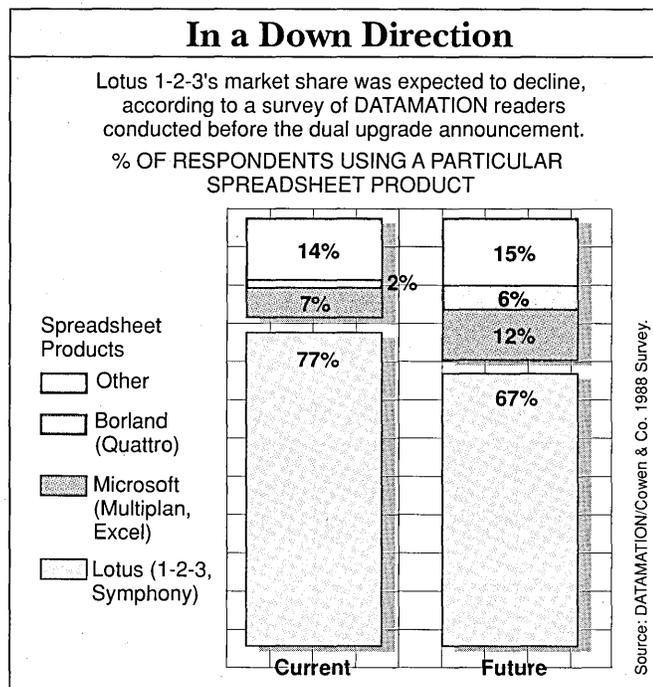

However, the 3.0 version has an extensive set of application interfaces called the Lotus Add-In Toolkit (formerly known as Lotus Extended Application Facility). The toolkit lets spreadsheet, data base and other packages supporting the toolkit interfaces function as unified applications.

Such differences have muddied the waters for IS managers interested in upgrading immediately. "We're asking ourselves, What features will Lotus release 3.0 have? What will release 2.2 have? You can't really tell . . . until you put them to use, play with them and see what they do. So, right now, I'm simply waiting," Wrangler's Wonnell says.

Many larger companies are putting off the choice, agrees Mary Spark, a product manager for Corporate Software Inc., a Westwood, Mass., PC software distributor. "The evaluation cycle will be somewhat delayed for the need to look at both products at the same time," she says.

The question of add-in support and the hefty memory requirements of release 3.0 suggest that its appeal will be restrained—at least for the near future. Frank A. Ingari, Lotus vice president and general manager of the PC Spreadsheet Division, declines to comment on sales expectations for the two upgrades. However, he says: "We don't see [release] 2.2 as release 3 junior. . . . release 2 will live a long time. Those 6 million [first-generation PCs] won't go away." Furthermore, Ingari says, the new toolkit interfaces may not be permanently excluded from release 2.2. "There is the question of resource allocation," says the Lotus executive.

The parallel development of releases 2.2 and 3.0 suggests that separate upgrades may only be a temporary response to the heightened com-

SOFTWARE

PC SPREADSHEETS

petition surrounding 1-2-3. Although Microsoft Corp.'s Excel spreadsheet already offers fancy graphics, it also requires the more expensive, second-generation hardware. And, although Borland International Corp.'s Quattro runs on first-generation PCs, it does not offer the same sophisticated graphics of Excel or of 1-2-3 release 3.0.

OS/2 Is Behind Two Versions

Lotus hadn't initially planned on the dual upgrade. "Really, release 3.0 was first considered as an OS/2 product. When we saw that OS/2 was not going to take off as quickly as some early projections indicated, we began preparing it for a DOS platform, as well," says Chris Randles, senior product manager for 1-2-3. Still unclear is the ease of upgrading from release 2.2 to release 3.0. For instance, Lotus expects most add-in software developers to create separate versions for 3.0. Even so, Lotus has disclosed neither a policy nor pricing for upgrading its own add-ins from 2.2 to 3.0.

Lotus currently accounts for about 77% of all PC spreadsheet installations,

according to the DATAMATION/Cowen & Co. 1988 Mini/Microcomputer Survey. However, that same survey projects a decline to a 67% share by the end of this year, while predicting that Microsoft's market share will rise from 7 to 12%, and Borland's share will triple from 2 to 6%, according to the summer 1988 survey of IS managers. (See "The Purchasing Outlook," November 15, 1988, p. 18.)

Yet, for those who abandoned 1-2-3 for other spreadsheet suppliers, it's not been all wine and roses. "We're in the process of changing our spreadsheet, or at least wanting to change our spreadsheet, but it's very difficult to discard that investment in Lotus 1-2-3," says Jake Parrott, end-user computing supervisor at Food Lion Inc. of Salisbury, N.C.

Food Lion recently designated Quattro as the corporate standard for PC spreadsheets. However, not all the company's users accept the change. "Some of the people in our analytical group are not happy with some parts of Quattro. It's like Lotus is a part of their PC, not just a software package," he says.

Still, Parrott says, Quattro does not force the company to make the hardware choices associated with release 3.0. "We run a pretty tight ship here. Even though we're adding PCs all the time, we're not going to have a wholesale move to 286 or 386 machines unless it's cost justified from A to Z," he says.

Hardware Upgrades Expensive

The issue of hardware upgrades isn't confined to Lotus, says Touche Ross' Knepper. "Excel would trigger a platform change . . . due to the graphics needed. So, just like [for] Lotus [release 3.0], the decision is not just a software issue. If you've got to buy a [Video Graphics Adapter] or [Enhanced Graphics Adapter] display, a mouse and get those working, it gets to be expensive, and it gets to be complex," he says.

"You're not just going out and buying a new piece of software anymore, you've got to commit to the right hardware as well, and that kicks it up into a whole different realm," says Knepper. From his perspective, the days of standing on the river banks are long gone. □

TRAINABLE.

Converting to FALCON was incredibly easy—we were able to retrain our entire data entry staff in a couple of hours.**

Before FALCON, one of our departments had to write out a complete 80-column record by hand. Now, they just fill in a few blanks on the screen and save an enormous amount of time.

It's mainly because of the screens—they're truly user friendly. Right there in front of the operator is all the information he or she needs to have—in exactly the same formats that the operator is used to filling out.

Another real FALCON plus is the flexibility of keyboards. We were able to speed up conversion to the new FALCON system by using a programmable IBM keyboard to simulate our old Nixdorf keyboard. Also now when we hire in temporaries, we can switch between keyboards to accommodate operators trained both on CRTs and various types of data entry systems.

I've even been able to train users in our Bayport, Texas facility over the telephone in less than one hour. Now, that's "trainable."

Alice De Remer

Alice De Remer
Data Entry Supervisor
Hoechst Celanese Corporation

Hoechst Celanese Corporation used FALCON to put their data entry operation on-line to their major MVS central system—and improve responsiveness to local users and regional offices across the country.

With the implementation of FALCON, Hoechst Celanese Corporation was able to decentralize data entry. The company's individual departments have taken over their own data entry, so they can key right up to 5 o'clock and still be assured of meeting central cpu run deadlines—and their information is processed that same night and available the next day.

"That's certainly much better turnaround that we were previously achieving—even with priority inter-company mail," Alice reports.

FALCON runs CICS or stand-alone (VTAM or BTAM) in all IBM operating environments including MVS/SP/XA/ESA and DOS/VSE/SP. And conversion between systems is fully transparent—so you can develop formats once, and run them across all environments.

Trainable and decentralizable—FALCON does it all.

Everything OS/2 can do for you...

OS/2™ includes a built-in graphical interface so it's easy to use.

OS/2 provides an optional Communications Manager which allows easy networking.

OS/2 lets you run your DOS programs plus hundreds of programs DOS can't.

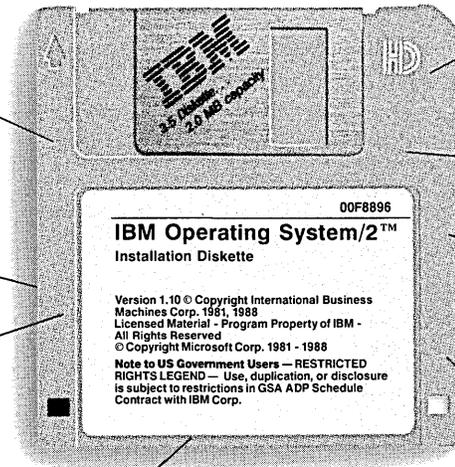

OS/2 lets you keep two or more programs running at the same time, so you can do more.

OS/2 lets you run programs larger than 640K, so you can use more powerful applications.

OS/2 lets you take advantage of 386™ power.

OS/2 lets you take full advantage of Micro Channel.™

OS/2 provides an optional Database Manager to make managing information easy.

This offer lets you do for less.

Right now, when you choose OS/2, you can get from \$100 to \$1,600 back on the kind of heavy duty memory that only OS/2 can handle. With this offer, the more memory you buy (up to 8Mb), the bigger your rebate.

Plus you can get thousands of dollars in rebates on over 100 different OS/2 programs. You can also get hundreds of dollars back on modems, accessory cards and hardware—all the things that help you do more work in less time with OS/2.

So if you're ready to move up to all the real advantages of OS/2, ask your IBM Authorized Dealer about these rebates today. To find the dealer nearest you call 1 800 IBM-2468, ext 128.

OS/2, Operating System/2 and Micro Channel are trademarks, and IBM is a registered trademark of International Business Machines Corporation. 386 is a trademark of Intel. © IBM Corp. 1989

Point of Access

Having gained control of their corporations' ubiquitous PCs, IS managers are now faced with a resulting boom in on-line data base services that itself is crying out for IS control.

BY LEILA DAVIS

To control access costs, maintain order on their networks and make sure their company is getting the best information, IS managers increasingly are thrust into the role of administrators of external on-line information services, as those services are requested by everyone from chief executives to financial analysts to secretaries.

"We are responsible for maintaining the information structure—the hardware and disks, the software, the PCs, the mainframes and the LANs. So we want to make sure that if a user is going to access an on-line data base, it works as smoothly as we would want our in-house access to work," says Chester Romaniak, vice president of IS for Teleglobe Canada Inc., the huge Montreal-based communications carrier.

"I'm not sure if we will ever take over the management of on-line data bases completely, but access must be controlled," Romaniak adds. "Just as the company doesn't give long-distance dialing capability to everyone, it shouldn't give dial-up access to everyone."

Other IS managers have reported an increase in requests for on-line services that are different from the simple hook-ups requested a few years ago. Frequently, they say, the user knows the kind of information he or she wants, but no longer has a specific data base service in mind. It is falling more and more to the IS staff to do that research.

Exploring the Options

"We are a lot more involved in on-line services than we were two years ago," says an IS executive at a major securities firm who asked that his name not be used. "There is an increased need from users and increased business requirements. When the user has a need for outside data, it is up to IS to explore the options."

"We work with the user to make the

selection. We would point out the technical issues—any technical shortcomings that the nontechnical person would not observe," the securities executive adds. "We look to the vendor to provide user training, but we also make sure that one IS person goes through the training for each on-line service [purchased]. That way, there is always someone in IS who knows the service, can address technical questions to the vendor and can answer user questions if there are problems."

At Central and Southwest Services

Inc., an electric and gas utilities company based in Dallas, IS also serves as a clearinghouse for on-line services requests. "We don't decide on the value of the need, but our job is to go about bringing that service into the company. We identify what data bases are available, the user chooses one and we make it happen," says Dick Groff, manager of EIS planning at the utilities company.

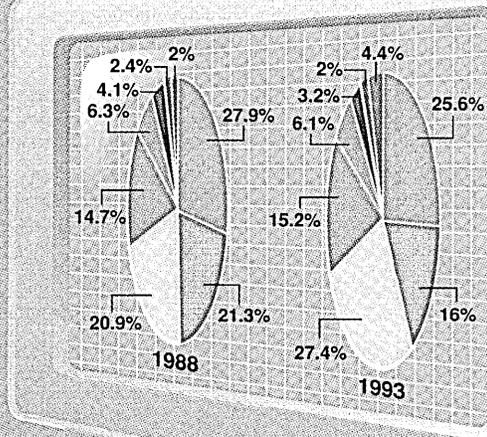

"On-line data base services have to come under IS for any number of reasons," says Steven Sieck, vice president

SYSTEMS

ON-LINE SERVICES

of electronic services at LINK Resources Corp., a New York City-based on-line services market research firm. "A lot of external information is most valuable when combined with internal information; for example, incorporating external and internal data on one graph. The more external information is integrated into the internal information sources, the more valuable it becomes. Obviously, IS must implement the tools to enable this."

Some companies' libraries still administer on-line services, but with increasing support from IS. At Marriott Corp., based in Washington, D.C., the legal department heavily uses the services of Dayton, Ohio-based Mead Data Central Inc.'s Lexis and Nexis on-line data bases.

For five years, these services were accessible only through a dedicated Mead terminal in the law library, according to library information specialist Elizabeth Wetzel. But two years ago, with the help of Marriott's IS staff and Mead, lawyers, paralegals and administrative staff gained access to Lexis and Nexis through the Wang Laboratories Inc. terminals on their desks. The new setup provides the lawyers with information on case precedents, and provides them with a data base of U.S. state and international laws that would take up too much room in the library in book form.

To avoid overloading the already-stretched legal department network, IS has limited access to no more than three Wang users at any time. The fourth user receives an "access denied" message and can try again later or go to the library.

"Mead came to us with the option of providing access to our Wang systems, and IS installed the Mead software. Our systems people had to modify the software somewhat to accommodate our terminals," says Wetzel. "Then the systems people came up with a set of instructions for the attorneys on how to access the data bases from the Wang computers. Mead did not have any written documentation for the systems, but it did provide the initial training."

Wetzel says members of the systems staff attended the Mead training and are available for emergency questions on ac-

□ COORDINATING ON-LINE ACCESS CAN PROVIDE A COMPANY WITH VOLUME DISCOUNTS.

cess and on problems related to the Wang computers. The library remains responsible for training new users, and billing for the data bases comes to the library.

IS Can Get Discounts

As for costs, LINK Resources' Sieck points out that as individual PC users accessing numerous data bases proliferate without corporatwide coordination, companies lose opportunities for volume discounts. "The information squires really want to have one point of contact within a company. They don't want to sell information by the drink," he says.

"Coordinating the on-line accesses within a company provides the economic

incentives to allow the broadest use," says Sieck. "This doesn't limit users' ability to get the information they need, it enhances it."

Fred Holahan, director of in-house computing products at Interactive Data Corp., a Lexington, Mass., subsidiary of Dun & Bradstreet Corp., agrees. "In brokerage houses, when the individual was procuring services himself, he had no leverage, no discounts for volume. Coordinating access through a company allows IS to use the corporate budget much more wisely," he says.

Indeed. Teleglobe Canada's Romaniak says IS monitors the use of the on-line services to "evaluate the value we are getting. This way, we can see what we are spending. When we look at the bills, the executives can decide clearly if Dow Jones or any other service is worth what they are paying." Cost control and the appropriate distribution of information are two of Romaniak's main concerns in monitoring on-line services, since the firm has almost as many PCs as it has people. "By the end of next year, we will have achieved almost a one-to-one ratio."

Romaniak also has more immediate technical reasons for taking on some responsibility for incoming on-line data bases. "If you have a lot of users unfamiliar with the on-line procedures sitting at PCs, looking through their instruction books while on line, trying to figure out slash commands, you are very susceptible to system errors. That user can run up a big access bill, freeze his PC and cause problems on the network."

Why IS Has Become the Gateway

Steven Sieck of LINK Resources Corp., a New York City-based on-line services market research firm, sees three reasons why on-line services are coming under the supervision of IS managers.

For one thing, he says, "The proliferation of PC LANs means more end users work together, so it is now possible and desirable to leverage the investment in outside services—and in hardware—across those networks."

The second reason is the emergence of the general business user, he adds. Specialty data bases have proliferated and on-line services directories are as thick as dictionaries—and most new users of on-line services are nonspecialists.

Sieck points out that Dow Jones & Co. Inc. of New York City, in its recent annual report, cites a boom in the use of its on-line news service by corporate executives. In the past, such services were more frequently used by librarians or secretaries, and the news items were passed on to the executive in hard copy. With more PCs in use by top management and executive information systems (EISs) becoming more prevalent executives are going on line themselves.

The third factor Sieck cites is the changing information marketplace. Big communications companies looking for other value-added markets are discovering on-line services as new revenue outlets. Sieck predicts regional telephone operating companies will soon be forming partnerships with large on-line vendors to get a foot in the door.

Building Front-End Access

Romaniak's solution is one being implemented by many IS managers faced with the same problem: front-end software interfaces that make access to on-line services much easier for the nontechnical user. Implementing these tools requires the expertise of IS departments, but can make administering on-line access easier on IS in the long run.

At Teleglobe, eight top managers use a Comshare Inc. executive information system (EIS), and four more are expected to use it within two months. Romaniak's department is developing an EIS specifically on business operations and will eventually develop one for marketing, as well. The firm started out with COMPAQ Computer Corp. 386 PCs and has a few of those in use, but has standardized on the IBM-compatible Packard Bell Co. 386 PCs.

The existing corporate EIS, based on Comshare's Commander EIS software,

delivers the Dow Jones on-line news service to Teleglobe executives via a set of interfaces readily understood by non-technical users. Comshare of Ann Arbor, Mich., already had a Dow Jones interface in place when the firm began using Commander.

"We can customize windows, depending on the type of news the executive wants—if he is just interested in specific companies, if he wants more or less detail," says Romaniak. "It makes on-line access very convenient. The executives are comfortable using it [Commander EIS] to access the data base, and it eliminates problems on our system when the user is not familiar with data base commands. The entire EIS takes about 15 minutes of training time for the executive."

A number of Teleglobe's executives have requested Infoglobe, a Canadian on-line news service. Romaniak and Infoglobe are in the process of developing an interface for the service that will be as easy to access as Comshare's Dow Jones interface.

"We have had other requests to add other on-line services too, and we will get to those as soon as we can. Right now, we are concentrating on implementing the rest of the EIS, function by function," Romaniak says. "Our legal department needs direct access to legal data bases—going through the library is too cumbersome for them—so we are considering putting them up on a system. We are getting a lot of requests at the managerial level for more on-line services."

Central and Southwest's top executives also requested more direct, and easy, access to news and stock information that their secretaries had been obtaining for them from The Source of McLean, Va. Groff chose to incorporate the request into an EIS called Easel, from Interactive Images Inc. of Woburn, Mass. Easel has a graphics interface specifically for Dow Jones, called Stockwatch, which provides the executives with the type of access they need.

No CEO Training Time

"You don't get a lot of training time with a CEO, and since we are getting more requests from executives, we are going more toward front-end software tools so they can use the on-line services themselves," says Groff. Right now, the company's top executives use Compaq 386s on a network, using Oracle's data base management system locally and the Easel EIS. Eventually, the system will link to the corporate data base on an Amdahl Corp.

mainframe, also running the Oracle data base.

Easel will allow the executives to compare stock information from Dow Jones with in-house performance figures and create graphics incorporating both internal and external data, says Groff. He expects many more requests for this type of service in the future.

These requests add to the general clamor for IS services, and they frequently take priority over other requests—for critical business reasons. However, the time it takes to act on such a request depends on the scope of the re-

□ THE MORE A PIECE OF INFORMATION IS SHARED AMONG DIFFERENT USERS, THE MORE VALUABLE IT IS.

quest and type of data base needed, say IS managers.

One of those critical business needs is using on-line data as a quality control measure for internal data. In the financial services industry, this practice has increased since the stock market nosedive of 1987, according to Holahan at Interactive Data.

The unnamed securities firm mentioned above receives five different on-line services, including Datasheet, a data base of pricing and financial data on publicly traded securities offered by Interactive Data. "We use Datasheet to provide corporate action information and foreign security pricing for those involved in the global custodianship of clients' securities," says the IS executive there.

Services Support Company Data

"The Datasheet data is used to support in-house data as a quality check; it is a second source to validate in-house information," says the executive. The hardware and software varies throughout the firm, he notes, but most users work on IBM-compatible PCs in a DOS environment.

"Before the [1987 stock market] crash, a lot of users at brokerage houses had their own PCs and their own budgets and their own individually procured on-line services. The individuals had more latitude before the crash, so they sourced their own analysis tools," says Holahan. "There was no method of standardization, no method in place to defend the investment decisions being made. One person was using one set of analysis tools, and the next person was using a whole different set.

"Management woke up after the crash

and saw that standards were needed to make investment decisions. Many brokerage houses have begun to standardize through IS on the on-line services they use for investment analysis," Holahan says.

LINK's Sieck notes a move toward standardization of internal and external data in other industries, as well. "The more the same piece of information is shared among different users, the more valuable it is. This is the role that information can play in maintaining organizational learning on a consistent basis," he says.

The trend toward greater IS control of access to on-line information services is converging with a trend among vendors to become merely suppliers of raw data to their customers.

"Users are beginning to want more control over the data they access. The future trend is for data base vendors and other new information providers to broadcast the raw data to the corporate site to be filtered and organized according to the needs of the organization, rather than being maintained and organized off site," says Sieck.

Interactive Data has developed one such on-line service. Called MarketPlus, the service incorporates a wide variety of global capital-markets data for financial services firms. MarketPlus consists of data, applications and a data base management system. The information is updated as an off-site data base would be, but instead of residing at the vendor location with dial-up access, the data are sent to the user's IBM or Digital host computer for distribution and are updated remotely by the vendor.

"This was created because we saw more involvement by IS. In fact, IS departments were asking us to create it," says Holahan. "They said PCs have run amok, and they see the need to manage both the hardware and the information for it most effectively."

Sieck cites Dow Jones as another example. Dow Jones has announced a network architecture called Dowvision, which will be used to broadcast data to a corporate site in a raw form.

Sending raw on-line data to a customer site could create new opportunities for vendors to assist in packaging that data for various applications, Sieck says. No matter which company or user organization fills that user need, he adds, "One thing is clear. It has to go through IS." □

DIALOG INFORMATION SERVICES, INC.
A Knight-Ridder Company

The world's largest online knowledgebank.

Information systems managers who have to work with uncertain or approximate information sources when building applications can take heart. A useful tool, "fuzzy logic," which has been around since 1965, is beginning to become commercially viable. Although not all of the problems have been ironed out, the tool has been successfully applied in some prototype hardware systems for applications that have proven difficult to handle with traditional logic.

Next month in Seattle at the International Workshop on Fuzzy Systems Applications, the third annual meeting of the International Fuzzy Systems Association (IFSA), three companies will show hardware products that implement fuzzy logic to solve problems involving uncertainty. While none of these is a turnkey system, all of the products have been successfully applied to expert, real-time control, information modeling/forecasting and data base organization/retrieval systems, primarily in Japan.

Fuzzy IS Applications

The technology may hold some promise for IS applications, as well. Carl Perkins, vice president of Togai Infralogic Inc. of Westlake Village, Calif., the only U.S. company exclusively devoted to developing the technology, says these applications could include:

- "Anything to do with queuing, for example, command queuing across ports;
- "Data retrieval, because fuzzy logic can make fast and accurate guesses as to where to find data;
- "Operating systems, because users often know something about their files, but not a whole lot. With fuzzy logic you don't need absolute accuracy in specifying files;
- "Stock [market] searching and sorting. Traditional search and sort algorithms use crisp criteria and will throw out a company's stock that doesn't precisely match them, but fuzzy logic allows you to use linguistic criteria and gives you a list of the most likely candidates that is much more like what a human expert would have picked.
- "Also, any sorting problem in multidimensional spaces where you don't know precisely all the information."

Fuzzy logic is a general calculation system that its inventor, Lofti Zadeh, claims is a superset of traditional logic, just as Newton's physics is a special case of Einstein's physics. "Fuzzy logic is the logic of approximate reasoning, with [traditional] precise reasoning as the limiting case," asserts Zadeh, a professor at the

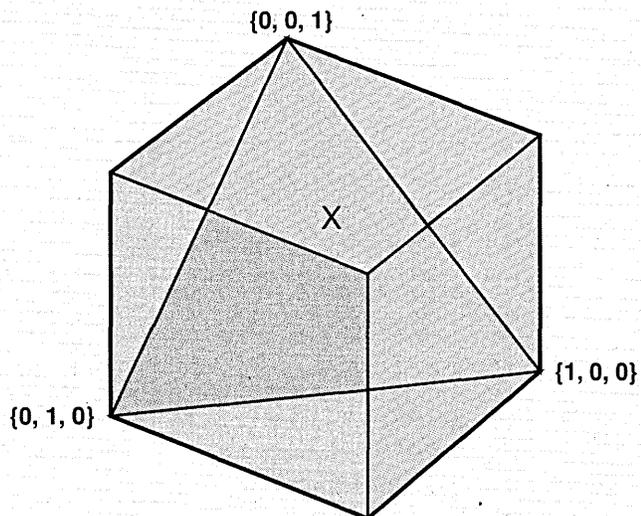

That Fuzzy Feeling

A mathematical technique for building applications involving imprecise data stands to gain commercial ground, as some new hardware components that employ it arrive next month.

BY R. COLIN JOHNSON

Bart Kosko's Fuzzy Cubism

In traditional logic, only values at the vertices of the unit cube are allowed, but, as illustrated, fuzzy logic fills in the unit cube at plane X between three traditional logic values.

University of California at Berkeley.

Since its creation in the mid-1960s, Zadeh's theory of an alternative to traditional logic has drawn fire, largely from mathematicians, for both theoretical and empirical reasons. Nevertheless, he continued to develop the theory with a steady stream of technical papers. His work eventually piqued the interest of two researchers at AT&T's Bell Labora-

tories. Hiroyuki Watanabe and Masaki Togai collaborated on a fuzzy logic controller board, which was widely publicized in the early 1980s.

Togai says the technology he has helped to develop will never replace traditional logic, since precise calculations will always be necessary. "Fuzzy logic is best used at the highest level in a system to narrow down the possibilities, relegat-

SYSTEMS

LOGIC

ing traditional digital logic to working out the details," he says.

So why the renewed interest in developing fuzzy logic-based systems after all these years? Because fuzzy logic may be able to solve problems that involve controlling or modeling the real world that have proven difficult to solve with traditional logic or even with artificial intelligence-based rules.

"Most natural concepts in the world are not crisp, they are fuzzy," Zadeh explains. "The reason AI has so many unfulfilled promises is that it uses conventional logic; it's an albatross around AI's neck."

That the companies at the IFSA show are emphasizing hardware for fuzzy logic does not mean it cannot be simulated with software. But a fuzzy problem representation can be more economically exploited by special hardware. A tiny fuzzy logic board can outpace a supercomputer running a simulation of fuzzy logic, according to Wei Xu, president of Apt Instruments Corp., the Chinese maker of the first programmable fuzzy processor.

"Simulating fuzzy logic [in software] is like emptying a dump truck with a spoon;

it can be done, but it is very time consuming," Xu explains.

In traditional logic, an 0 is always 0 and a 1 is always 1. In fuzzy logic the basic alphabet of bits is not limited to those 0s and 1s, but encompasses any number of continuous mathematical functions called "membership" functions. Consequently, its truth values can range continuously between 0 and 1, allowing it to handle an infinite variety of other values, such as three-valued logic.

Since fuzzy logic allows smooth gradations of truth values between 0 and 1, it matches well with many aspects of the real world. For instance, live data often come in continuous ranges rather than in discrete steps. Measures of speed, temperature, voltage, population, birth rate and more are all continuous rather than discrete. In fuzzy logic, these ranges can be represented directly. But in traditional logic these ranges can only be represented with complex numerical techniques that approximate a continuous function.

The economy of directly representing continuous functions, rather than build-

ing them up from strings of 0s and 1s, has made systems faster and easier and much smaller than equivalent systems built with traditional logic. Expert systems, for instance, have had limited success so far, partially because they require hundreds of rules to simulate real world situations. But with a single fuzzy rule representing a whole spectrum of events, the corresponding fuzzy expert system would typically require only tens of rules.

The Critics' Case

As rational and promising as fuzzy logic may sound, critics on the theoretical side, especially probability specialists, charge that it is not clearly derived from fundamental mathematical, or "first," principles. On the empirical side, critics charge that fuzzy logic provides no clear method of gathering data and combining them into membership functions.

Zadeh's theoretical case has been helped by his protégé, University of Southern California professor Bart Kosko. Kosko claims to have derived a mathematical theorem that shows how probability theory is a subset of fuzzy

Mapping the Future of Fuzzy Systems

At next month's third annual meeting of the International Fuzzy Systems Association (IFSA), one U.S. company will show the world's first commercial microprocessor based on fuzzy logic, two Japanese companies will announce the availability of their fuzzy systems in the United States and a Chinese company will show the world's first on-line programmable fuzzy processor.

SUGENO: Japan is using fuzzy systems.

Togai Infracore Inc., which already has a C language precompiler that includes extensions for fuzzy logic, will announce its fuzzy logic microprocessor that can directly execute the fuzzy part of those extended C programs.

Togai was founded by Masaki Togai, who was an engineer AT&T Bell Laboratories with Hiroyuki Watanabe in the early 1980s when the two built the first fuzzy system in the United States.

Today, Watanabe, on the faculty of the University of North Carolina at Chapel Hill, has built the only other

fuzzy microprocessor available in the States. Announced in May, it was fabricated by the Microelectronics Center of North Carolina at the nearby Research Triangle Park.

Two Japanese companies, Mycom Inc. and Omron Tateisi Electronics Co., both in Kyoto, will be offering dedicated controllers to the U.S. market through their subsidiaries here.

Mycom's system is based on a proprietary read-only memory (ROM) chip that works in conjunction with any standard microprocessor. The user specifies the rules to be used, and they are compiled into the special ROM that holds the proper fuzzy re-

sponse, according to your rules, to any given input situation.

The various models of Omron's fuzzy peripheral, in contrast, use a mix of digital and analog components linked to a personal computer via a serial link.

To capitalize on fuzzy logic's inherent speed advantages, Apt Instruments Corp., which is based in Tokyo to avoid trade barriers, has designed a series of fuzzy processors that it is licensing to others for manufacture. They will be available next year.

These fuzzy products have, to date, been used in 80 successful applications in Japan, says Michio Sugeno, professor of engineering at Tokyo Institute of Technology. A subway system in Sendai is controlled by a fuzzy processor (in lieu of an engineer) and reportedly affords a smoother ride than any human conductor ever provided. Tokyo-based Yamaichi Securities Co. Ltd. is using a fuzzy system to pick stocks for a special portfolio.

Other fuzzy expert systems under construction in Japan are designed to make management-level business projections, control output from power stations, economize on automobile gas consumption and refine manufacturing process control.

Impressed by the number of these projects, Japan's Ministry of International Trade and Industry (MITI) has set up a consortium of 48 top Japanese companies to develop fuzzy systems. It is called the Laboratory for International Fuzzy Engineering (LIFE), a name coined by Sugeno, who is a consultant to the lab. Its \$70-million budget is coming from member companies like Canon Inc., Fuji, Fujitsu Ltd., Hitachi Ltd., Honda, Minolta, NEC Corp., Nissan and 40 other top Japanese companies.

"Even though fuzzy logic has proven successful in numerous applications in Japan, the only U.S. applications, so far, are at NASA, where they are using it for shuttle positioning," says Carl Perkins, vice president of Togai Infracore.

logic. "Fuzzy theory is a natural filling-in of set theory," Kosko says. He illustrates this with a geometrical argument that can be pictorially represented as a unit cube (see diagram, "Some Fuzzy Cubism").

The eight vertices of the cube are the crisp digital logic points (0,0,0 : 0,0,1 : 0,1,0 . . . 1,1,1). But the inside of the cube contains all of the infinitely fuzzier points (e.g.: .3, .7, .9). Various value sets for common fuzzy operations have geometric equivalents that can be easily seen, such as the triangular plane in the diagram.

Kosko provides a theoretical underpinning for his geometric interpretation by proving the cornerstone theorems that probability theory merely assumes as axioms, including the laws for adding and multiplying probabilities.

On the empirical side, Pei-zhuang Wang, a professor at Beijing University and chairman of Apt Instruments, announced this year that he has devised an empirical method for deriving the membership functions from raw data.

In a manner he says is as easy as collecting statistical data, Wang has shown how

to sort data automatically into fuzzy sets. Briefly, his approach shows probability data as points along a fuzzy continuum (say, from FAST-to-SLOW). With very simple arithmetic operations, as with probability theory, he then shows how data can be collected and manipulated, producing continuous fuzzy intervals rather than individual probability points.

These large issues aside, some devel-

□ KOSKO'S MATHEMATICAL THEOREM SHOWS HOW FUZZY THEORY IS A NATURAL FILLING-IN OF SET THEORY.

opers and researchers in advanced logic systems raise a further objection, saying that fuzzy rules are more difficult to debug than rules based on traditional logic.

"People think that by only using 0s and 1s, they can check every case and that you can't check every case with the continuous functions used by fuzzy logic," says Togai's Perkins. "But the fact is that no debugging techniques can give you a 100% guarantee. It is an NP [number of

permutations]-complete problem for both fuzzy and digital logic."

In fact, Perkins asserts, "fuzzy logic-based systems are less susceptible to bugs because a single fault doesn't crash the whole system. A fuzzy system can tolerate variations because its rules weren't precise in the first place."

Fuzzy logic backers also claim that it is easier to extract these fuzzy rules from human experts than the precise rules required by conventional expert systems.

Most of the criticisms, say fuzzy logic developers, derive from a bias toward binary logic, which they call the "balls and urns" problem. "People can understand how to predict whether the next ball pulled out of an urn will be black or white," Perkins says. "But if you put balls with any shade of gray in an urn, the binary bias makes you throw up your hands and say it's impossible to predict, but it's not." □

DATAMATION
FOR MANAGERS OF INFORMATION TECHNOLOGY WORLDWIDE

GOOD NEWS

Magazine editors and corporate buyers alike put nearly every modem on the market under close, demanding scrutiny.

Editors at PC MAGAZINE in a review of 87 modems chose Multi-Tech for their Editor's Choice. Corporate buyers surveyed by PC WEEK gave Multi-Tech their highest scores for quality, overall performance and organized documentation. INFO WORLD, in detailed line impairment testing, named Multi-Tech the unquestionable "top performer." And results of the DATA COMMUNICATIONS Datapro User Review prompted editors to comment, "It's no wonder that Multi-Tech's performance and market share continue to grow."

Compromise Your Standards And Nobody Else Will Talk To You.

In The Dial-Up World, Connectivity Is Just As Important As Speed.

Just about every V.32 modem ad you read hypes speed. However, it doesn't matter how fast a modem transmits data, if the one at the other end can't receive it.

If you rely on a modem that uses proprietary modulation schemes, handshaking techniques or data compression classes, you've compromised your connectivity.

Which is why you should choose our DataComm 296B. It's fully compliant with V.32 standards. So it can talk to any other real V.32 modem, synchronously or asynchronously, without any tricks, using universally available data compression techniques.

And if you're really looking for throughput, consider this: our DataComm 296B will sustain in excess of 30,000 bps, full duplex, under real world conditions, using real world data and industry standard MNP* Class 5.

But, because bits-per-second are not the only measure of throughput, you should consider our Continuously Adaptive Echo Cancellation feature. It can improve throughput

even further by drastically reducing retransmissions. (If you get it right the first time, your throughput will be higher, and your phone charges lower.)

So if you're really serious, don't compromise your standards. Contact us. Our representatives have a whole lot more to talk about. Like Automatic Dial Back-Up, DataCommonality and a nationwide service organization.

Serving Two Masters

Choosing between dial-up or leased line networks is less an issue today thanks to dual identity modems. These modems are spawning hybrid networks able to operate with dial-up and leased line connections.

BY ARIELLE EMMETT

International Speedway Corp. had all but settled on a network to link a corporate computer with ticket terminals. The company, which owns and operates raceways in several southern states, had narrowed its choices to an X.25 dial-up network or Digital Data Service, an AT&T-provided leased line network.

There were problems with each, recalls David Hickman, a data-processing manager who handled the evaluation for the Daytona Beach, Fla., company. "We

did a lot of experimentation and found we could support our users with a modem of 19.2Kbps [kilobits per second] or less," Hickman says. "We wanted to give our users 9,600bps transmission, but at that speed, our high-volume print jobs would seriously degrade the network." Rather than accept the compromises an exclusively dial or leased line network implied, Hickman made a decision worthy of Solomon: picking modems that could function in either network type.

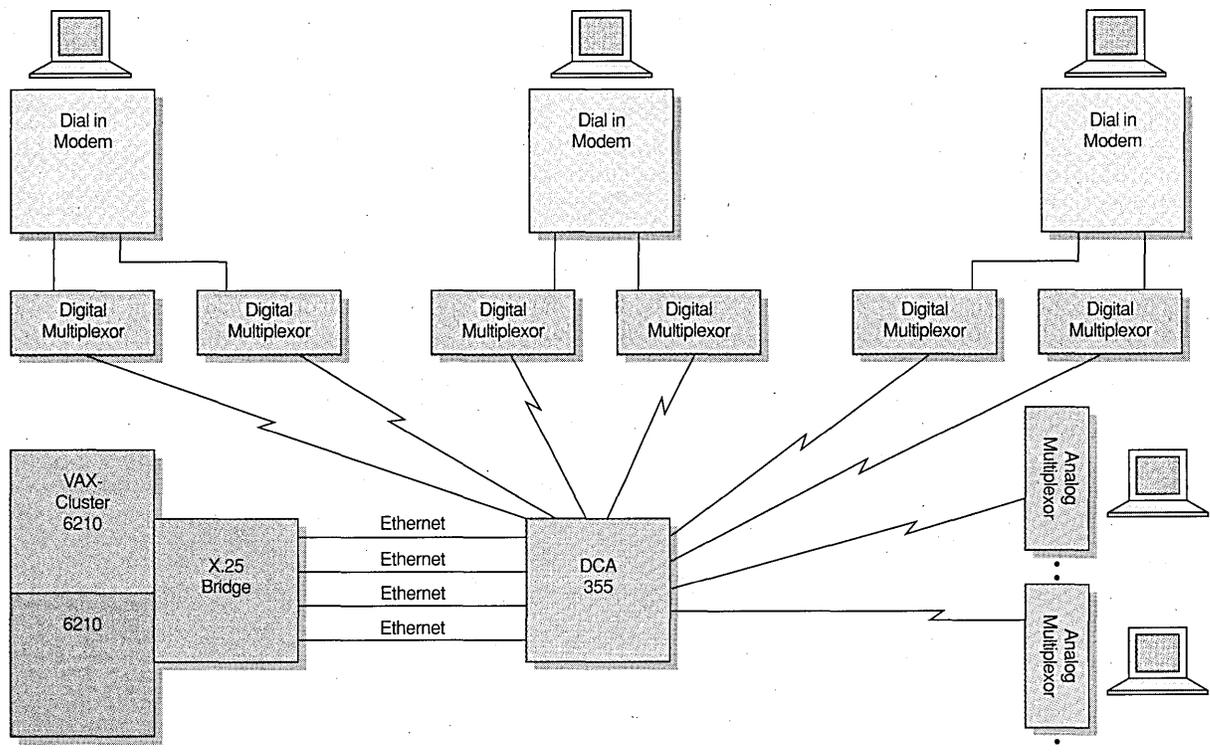

"Choosing a modem that could do

both leased line and dial backup was an innovative twist," Hickman says. "We needed dial backup to the public telephone network" for those occasional service disruptions caused by errant construction crews. At the same time, "since all our applications are long distance, and our average transmission is a continuous 60 hours per week, leased lines were essential. So we chose a leased line modem with single phone line backup capability."

Like Hickman, telecommunications

A Hybrid Network at Work

Diagram describes the variety of dial and lease line connections used by southern California real estate agencies to access housing listings on a Multiple Listing Service regional database.

managers in large and small companies across the country are mixing and matching dial-up and leased line network communications. International Speedway implemented its network using V.32 modems from British Telecom. The chameleon-like features of V.32 modems—which support 9,600bps dial and 2- and 4-wired leased line communications—have made hybrid networks a reality at many companies.

Moreover, the flexibility and higher transmission speeds of these V.32 modems have breathed new life into dial-up networks. “Dial is becoming a viable alternative to leased line,” agrees Russell Wood, senior director of marketing for Racal-Milgo Inc., a leased line modem vendor that recently merged with dial-up sister company, Racal-Vadic Inc. But, Wood cautions, “a lot of companies depend on the network to run their businesses. Network operation is crucial to them; in these cases, leased line network management is much more sophisticated and reliable than dial,” he says.

Phantom Issues?

As dial-up modem speeds increase and costs drop, the choice of the network type falls more and more to issues of speed, reliability and data integrity. “The thrust is toward cheaper, more reliable dial modems,” says Chuck Champine, a telecommunications manager for Moore Data Management Services, a \$100 million company that designs and sells electronic data base systems to real estate associations around the country. The company is a Minneapolis-based subsidiary of Moore Business Forms Inc. Despite the push toward higher and higher speed dial modems, Champine believes that some users may be shying away from V.32 dial modems because of the international standards war over error correction. “Standardization is an issue.”

“We are standardizing around a V.32 modem with the Microcom Networking Protocol [MNP] for error correction,” Champine says. But a number of companies are still playing wait and see in the wake of a dual error correcting standard in CCITT’s draft of V.42 (See “The Dual-Protocol Modem Duel,” DATAMATION, Feb. 15, p. 81).

“We are waiting to see how [the two standards] shake out with different vendors,” says Ken Yorgensen, a director of telecommunications at Baxter Health Care of Deerfield, Ill., a \$6.5 billion hospital products company that has both an extensive private leased line network and a dial network for 4,000–6,000 custom-

ers around the country. “We’re making a shift in the dial world toward MNP class modems,” he says. But Yorgensen adds that his company had not settled on a high-speed dial modem platform because of uncertain vendor support for V.42.

Baxter Health Care is among those that have adopted a pragmatic strategy toward the leased line versus dial decision. “In most cases, decisions boil down to economics, availability and throughput, but principally economics,” says Yorgensen. For example, the company maintains an extensive leased line network of 9,600bps General DataComm modems for internal use. A secondary dial network has been created to allow hospital customers to order directly from

□ DIAL MODEM SPEEDS ARE CREATING ALTERNATIVES TO TRADITIONAL LEASED LINE NETWORKS.

their own terminals using 2,400bps modems.

“Dial-up [networks] historically have been used for limited access and small amounts of data,” Yorgensen says, “while leased lines are used when high throughput, availability and quick response time are the key issues.” The company is considering piggybacking data transmissions onto an existing long-distance voice network. It is also weighing using the dial backup capabilities of V.32 modems to complement its private, leased line data network.

Lease Line Modems Dominate

Whether or not users will expand their use of dial-up V.32 modems is unclear. Larry Cynar, an industry analyst and modem market specialist at the market research firm Dataquest Inc. of San Jose, Calif., says leased line modems are still being sold four times as often as V.32 dial modems. While the numbers are growing rapidly—V.32 sales are double what they were in 1987—“it’s still a very small number compared to the 2.4 million modems out there,” he says.

Nonetheless, Cynar acknowledges that the total dial-up market has begun to overwhelm leased line sales. “Dial, including the low-end modems, now comprises three-quarters of the total modem marketplace. From a user standpoint, many have been reluctant up until now to put critical applications on dial-up. But now that higher speeds are available through V.32, with error control, users are less concerned about errors in appli-

cations where the requirement is for random—rather than constant—communications,” he says.

“What we’ve seen is a second coming of dial modems in the last 12 months,” claims Julio Siberio, access products line manager for Racal-Milgo in Ft. Lauderdale, Fla. Siberio reports that the advent of V.32 has helped push dial modem sales at his company to an equal split with leased line modems. Five years ago, the ratio was 60–40 in favor of leased lines—but the explosion of PCs and automated inventory control applications led to skyrocketing dial modem sales, he contends.

For example, dial-up is being employed increasingly for interactive and high-speed burst data traffic tying PCs into minis and mainframes at remote sites. Applications such as customer order entry, electronic mail and data base access are prime examples of this traffic.

“Mainframe to mainframe is typically a leased line choice,” says Doug Antaya, a director of product marketing for Codex Corp., a Canton, Mass., producer of leased line and dial modems, including domestic and international versions of V.32. “But because you can now get 9,600bps in a dial environment you have some customers” reevaluating their leased line networks, he says.

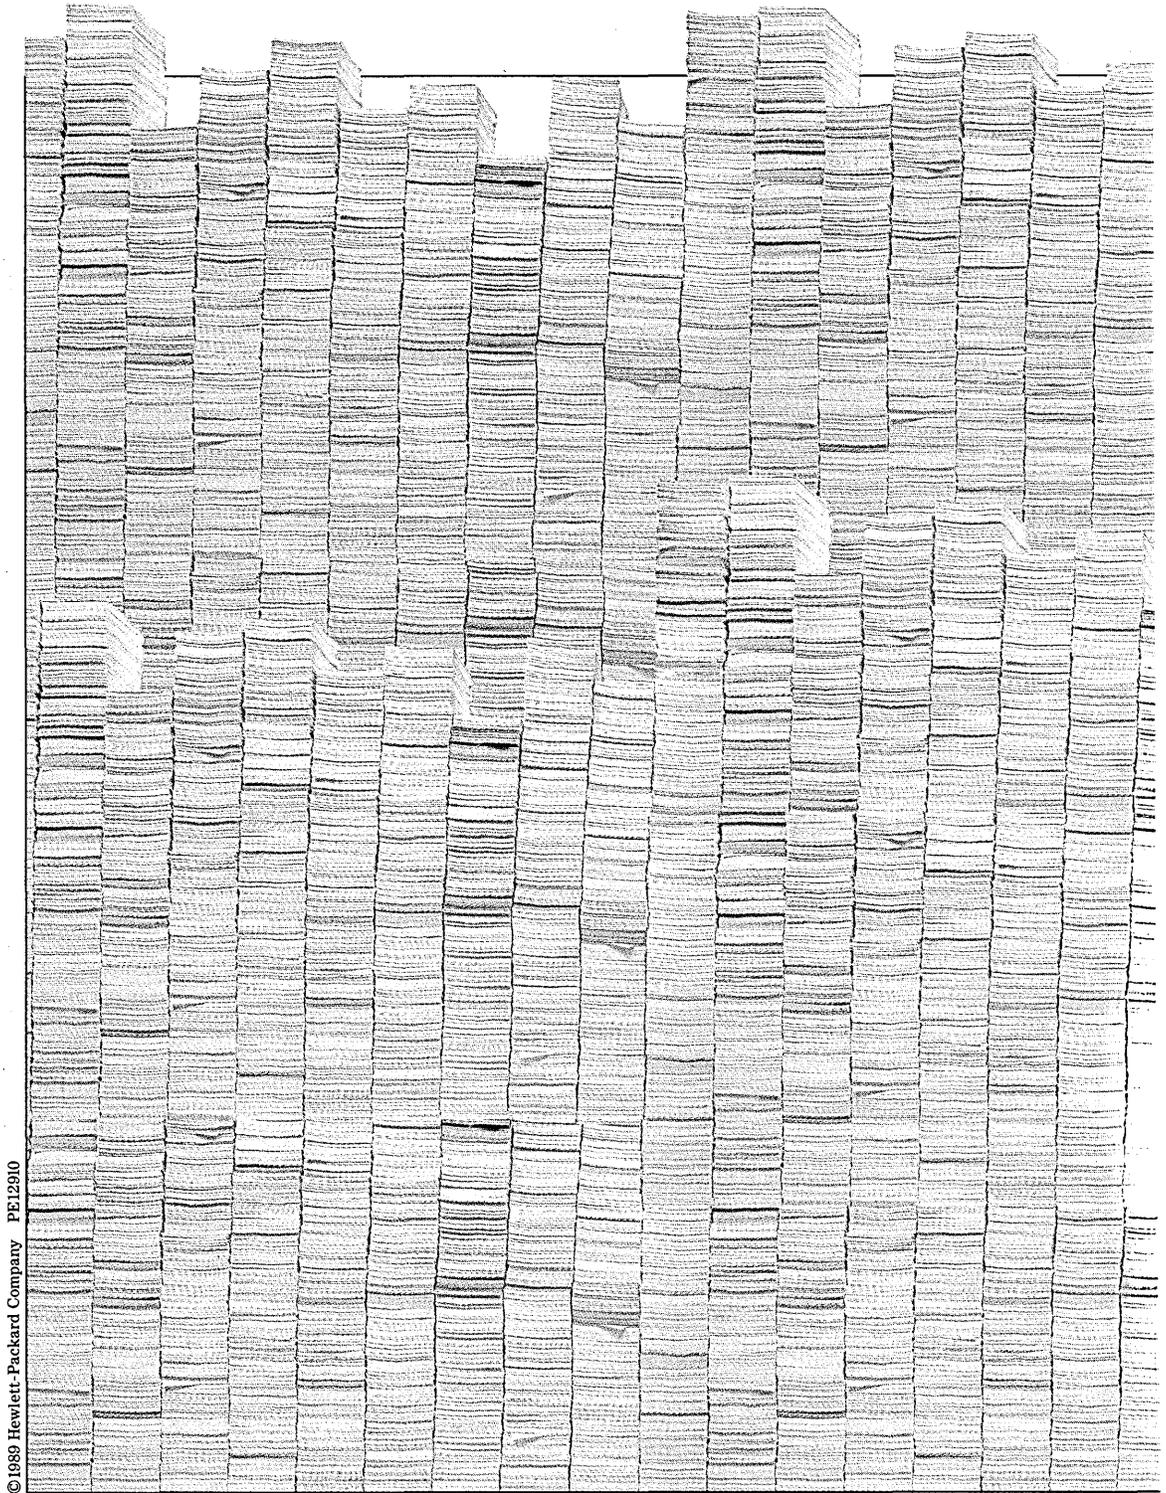

Usage Ratios Can Vary

Quite often the choice boils down to time and cost: how many hours the company expects to use a modem and the costs of installing dedicated private circuits and of line conditioning. “Dial is not going to replace leased line,” notes Gregory Pearson, vice president of technology planning at Microcom Inc. “But certainly the equation is changing. A dial modem today can go as fast as 38Kbps with data compression, and leased line [fees] have not gotten any cheaper. So if you only need to be on line a few hours a day, the phone may be just as good.”

At International Speedway, for example, DP manager Hickman determined that the dividing line for cost effective 9,600bps dial service was 24 ½ hours per week. Any usage below that justified dial modems; anything above that represented a cost advantage for a leased line solution.

“Unless you’re talking about three hours or more per day of continuous usage, high-speed dial-up can be an economical choice,” said Dataquest’s Cynar. However, he cautions that estimates of the breakpoint will vary according to phone company tariffs and the modem speeds—among other factors.

MODEMS

"Users are going away from leased lines for many reasons," says Garry Betty, a senior vice president at Hayes Microcomputer Products Inc. "The biggest is cost. Lease lines since divestiture have increased in price 25% a year, while the cost of long-distance [service] has gone down." In the future, conversion to integrated services digital network (ISDN) switches and terminal adapters may eventually spell the decline of the analog modem—or it will be upgraded to accommodate ISDN.

Case-by-Case Analysis

Users, however, seem more cautious in tone. "We evaluate our customer requirements on a case-by-case basis," said Champine of the Moore Data Management Services Division. As far as data networks go, "one size does not fit all."

Champine, who 11 years ago began planning telecommunications networks for real estate agent groups, originally created a system based on dial technology. "We were using slow, 300-baud modems," he says. "Multiple-listing services which bought our data base system would distribute dumb terminals to various real estate agencies within their region. The agent would dial into a central [computer] to access housing information."

Today, his networks are far more complex. Though Champine continues to use

high-speed dial modem technology as a backbone, Champine also has configured networks combining dial and leased lines, cluster controllers, foreign exchange lines and, in some cases, X.25 interfaces.

"The driving force is to provide economical communications solutions," Champine says. "If, for example, the customer requires four terminals in one exchange calling the computer in another, then we'd use a foreign exchange line. If there are 40 terminals, we'd employ a multiplexer; and if it's a statewide operation, we use packet-switched technology."

One of Moore's largest regional real estate networks in southern California is a hybrid network of Multi-Tech Systems Inc. dial and Digital Communications Associates (DCA) Inc. dedicated modem technology (see illustration). Real estate associations in remote townships send and retrieve via dial-up lines while more local suburban offices transmit directly via CRTs multiplexed to leased lines.

"Dial is still the linchpin for our networks," Champine said. "The reason is cost—a leased line typically will cost \$80 to \$200 a month and tie up a computer port, whereas dial-up gives you contention and dynamic allocation of resources," he says.

Paul Hathaway, a systems programmer

with McLane Data Systems Co. of Temple, Texas, says high-speed dial-up offers yet another advantage: backup to satellite equipment. His company, for example, replaced its leased line data network in recent years with a Contel ASC satellite network. "We asked ourselves what would happen if the bird fell out of the sky," Hathaway recalls. "We knew we needed dial backup." McLane Data Systems opted for a V.32 modem able to switch automatically from dial to lease line in conditions of line failure. "It can be dial-up, or leased 2- or 4-wire," he says. The modem is equipped with an integrated multiplexer, which enables McLane to transmit job entry data along available satellite channels without eating up too much bandwidth.

Has the satellite system equipped with dial backup saved McLane money? "It has been a substantial savings," Hathaway says. "I don't know how you compute the cost of losing customers, but that's where the dial backup has really saved us." Like many users, Hathaway believes that dial will play an increasing role in corporate networks of the future. "Dial has got to get cheaper," he said. "But for people in metropolitan areas, it's already there." □

Dual Standard.

Competitiveness: A New Standard

Major corporations are investing millions of dollars to back a software standard that's at best a few years away. And they're counting on IS execs to use the standard to integrate their engineering and manufacturing operations.

BY BOB FRANCIS

For IS managers who feel their plate is already full of standards issues, it's time to check the kitchen door again. There's another helping on the way. This one, however, carries more weight with manufacturers truly committed to staying or becoming competitive in world markets.

It's called the Product Data Exchange Specification (PDES), a method of digitally defining a given product throughout its critical design and manufacturing stages in a far more comprehensive way than the current means allow. The specification, which is actually a proposed graphical data standard to which software used to create the product must adhere, defines the physical and functional characteristics of the product in terms that computers of all types can interpret—even those used in the maintenance of the product after it has been sold to a customer. Practically speaking, PDES-based product designs will work across the heterogeneous computing environments.

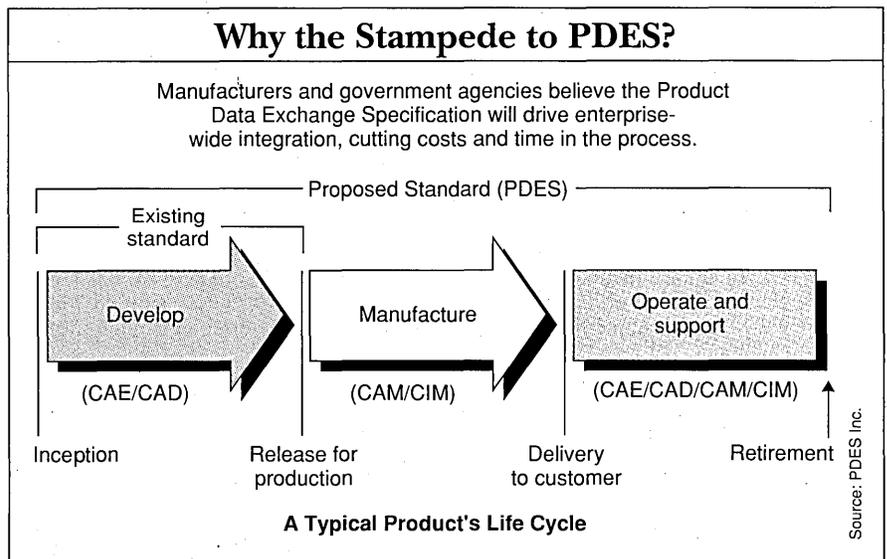

"It will give you the ability to move information from one organization to another and thoroughly understand the full meaning of the product description," says George M. Kaler, director of information resource management at General Dynamics Corp. in Fort Worth. That, in turn, will help cut development time and result in a product closer to the original designer's intentions. And it also will give manufacturers greater flexibility in designing and producing a wider variety of products on short notice and in short runs—a necessity as consumer and industrial goods markets grow increasingly fragmented.

PDES also may drive integration of a dif-

ferent sort. It could induce IS departments to form closer bonds with their counterparts in engineering labs and on factory floors. "The IS side has the systems to bring the total enterprise together," says Larry Patrick, business development manager at D. Appleton Company Inc., a computer-integrated manufacturing (CIM) consulting firm in

of Orr Associates Inc., a consulting firm in Great Falls, Va. "They [IS managers] let those guys have their VAXs, and they handle the Big Blue machine," Orr says. "[PDES] may force them to realize that they're all working in the same company."

The potential competitive benefits of PDES are regarded as so high in the

Bedford, Texas.

Many forward-thinking manufacturers already have bonded their IS departments with their engineering and manufacturing operations. But that's not typically the case. At the mid-sized manufacturers, IS managers are often not much involved with the data processing that takes place on benchtops and in work cells, according to Joseph Orr, president

of Orr Associates Inc., a consulting firm in Great Falls, Va. "They [IS managers] let those guys have their VAXs, and they handle the Big Blue machine," Orr says. "[PDES] may force them to realize that they're all working in the same company."

United States, in fact, that backers in both government and private industry are doing everything in their power to speed approval of the standard. At the urging of the U.S. Department of Defense, 16 *Fortune* 500 industrials ranging from the Boeing Co. to Westinghouse Electric Corp. have formed and funded their own company, PDES Inc., to bring the proposed standard into reality. Two

MANAGEMENT PRODUCTIVITY

European car makers may soon join the confederacy, as well.

Optimists believe a PDES standard may be approved as early as 1992. But realists point out that such progress will have its costs, too. There are major questions surrounding the price of fully implementing PDES-based systems that go beyond the annual dues that PDES Inc. members pay (up to \$100,000 a year in some cases) and the man-hours they and hundreds of other U.S. companies working on the new standard have devoted to the cause.

The Effects of PDES

"Data capacity requirements will increase greatly because there will be quite a bit of information [being transferred] off of a paper environment into a computer environment," says Glen Ziolk, systems manager of computer-aided design and manufacturing at the Grand Prairie, Texas-based Aircraft Products Group of LTV Corp., a PDES Inc. member company. "Because of that, there will be more applications written to extract it [information] in the different forms everybody needs it in."

Another CAD/CAM director worries

that implementing PDES will have a devastating effect on his existing product design data bases, which are built on a much simpler product specification standard known as the Initial Graphics Exchange Specification. Files created using software that complies with IGES, now 10 years old, may or may not be readily transferable to PDES-compliant systems. If not, users will be forced to spend considerable sums of money to rewrite IGES

□ PDES MAY BE STRETCHING CURRENT TECHNOLOGY BEYOND ITS CAPABILITIES.

applications into PDES form.

"[PDES] may be stretching current technology beyond our capabilities," says Larry Peck, manager of utilities applications for CIMLINC Inc., a vendor of CAD/CAM software and turnkey systems, in Troy, Mich. "It may take more years to establish as a standard than many people think."

Not if the U.S. government, industrial

powerhouses like General Motors Corp. and key systems suppliers have their way. All in their own way are pushing for early adoption of PDES as a standard.

The Department of Defense regards PDES as a prime element of its computer-aided acquisition and logistics support program. CALS, as it's known, is an ambitious effort on the part of the U.S. government to set standards for the submission and interchange in digital form of documents from government contractors. "The government has basically said that, to do business in the future, you have to meet its CALS standard, and PDES is one piece of technology that allows a company to meet that standard," says D. Appleton's Patrick.

Government and PDES

IS managers in the defense sector are looking beyond what PDES can do for Uncle Sam. They see dividends for their own operations. "The main benefits will come from implementing its ideas internally within your organization from both the bottom and the top—from management through IS and from the factory floor to engineering," says Tony Day, CAD/CAM research specialist at the Stratford, Conn.-based Sikorsky Aircraft Division of United Technologies Corp. He's a member of the IGES/PDES organization that proposed the original PDES standard in November 1988.

The government's interest in PDES was evident earlier on. In August 1987, its defense agency convened a group of 20 of its largest suppliers to see if they could work together to hasten the specification's approval. That led to the formation of PDES Inc. in April 1988. Its charge is to accelerate the implementation of PDES by testing and integrating the standard into various manufacturing environments. The group has the backing of the two most influential standards organizations, the American National Standards Institute and the International Standards Organization. And many of its members belong to the IGES/PDES organization that first proposed a specification standard.

The Other Power Behind PDES

More important, PDES Inc.'s membership reads like a *Who's Who* of U.S. industry: Boeing Co., Ford Motor Co., General Dynamics, General Electric Co., General Motors, Grumman Corp., Lockheed Corp., McDonnell Douglas Corp., Northrop Corp., LTV, Martin Marietta Corp., Rockwell International Corp. and Westinghouse Electric Corp. Systems

A Sequel to IGES

PDES could almost be called son of IGES, the specification standard currently in use on computer-aided design and manufacturing systems.

The Initial Graphic Exchange Specification was developed in 1979 to allow the exchange of product data models in the form of 2-D and 3-D wireframe drawings, fully surfaced drawings and solid model drawings.

IGES technology has its limitations, however. Using it, for example, an engineer looking at a part designed with several holes in it couldn't distinguish those holes from the circular edges of a rod because both, under IGES, are represented by circles on a computer screen. It requires that the engineer know enough about the part to interpret the circles as signifying holes, not rods. Such interpretation would be unnecessary with PDES-compliant software which would tell the engineer much more about the part in question.

While IGES dwells mainly on the computer-aided design realm of a business, PDES technology enables the engineers and others involved in the design and production of a part to exchange such nondesign information as manufacturing features, tolerance specifications, material properties and surface finish specifications. "The idea is to communicate a complete product model," says Bradford M. Smith, chairman of the IGES/PDES organization that drafted the initial PDES standard in the fall of 1988.

PDES may require some more input on the part of the design engineer when the first model of a part is being drafted. "Users will have to put in more of the knowledge that they intuitively put into a drawing to work in the PDES form," notes Glen Ziolk, systems manager for computer-aided design and manufacturing at the Aircraft Products Group of LTV Corp. "The software will prompt them [design engineers] for more information."

The new standard is international in scope. European users and suppliers are pushing a specification known as the Standard for the Exchange of Product Model Data (STEP), which differs slightly from PDES. The International Standards Organization (ISO) is reviewing both proposals. "To many, PDES and STEP are simply two elements of an internationally coordinated effort," Smith says.

suppliers Digital, IBM and Prime Computer Inc. also belong to it.

The dues for joining PDES Inc. aren't cheap—underscoring the importance its members place on the specification. A Class I membership annually requires \$100,000 and two man-years of technical effort from the company. Class II status calls for a yearly contribution of \$50,000 and one man-year of technical effort. A Class III member must pay \$25,000 in annual dues.

The objectives of PDES Inc. are equally high. The first phase of the group's program, validating and implementing the proposed standard, is already under way and should be completed by mid-1990. The second phase will focus on how to implement the standard in data bases—a process members hope to complete by 1992. The standard also is being tested by the National Institute of Standards and Technology in Gaithersburg, Md.

Where GM Is Driving the Standard

No one sees the benefits of PDES more clearly than the world's biggest manufacturer, \$121 billion GM. The company's C4 program will use PDES as a major link among computer-aided design, engineering and manufacturing and computer-integrated manufacturing throughout a

□ GENERAL MOTORS SEES PDES' BENEFITS AS CRITICAL TO ITS SUCCESS.

car's development—from the time the lines of its fenders are drawn on a workstation to the day a GM assembly line ships them out the door.

GM views PDES as nothing less than critical in its drive to excel in competitiveness. "When you look at how widespread we are and all our different locations, [our design and manufacturing system] has to be flexible," says Rudi Gern, network development manager for GM's C4 program and an employee of GM's subsidiary, Electronic Data Systems Corp. "We may have someone designing a product at our Opel plant in Europe, then sending the data to our CPC [Chevrolet-Pontiac-Cadillac] division in Detroit for some action and then to a manufacturing organization in Brazil to get ready for future production. There will be many different systems and environments to support, and the data must flow through all of them," Gern says.

Other companies are also preparing

SIKORSKY'S DAY: Benefits come from implementing PDES ideas through the firm.

their IS departments for the change. "We recognized a few years ago that information was not going to be locked in one area any longer," says General Dynamics' Kaler. His information resource management department was formed in late 1987 for the express purpose of integrating all the information generated by previously separate design, engineering and manufacturing systems.

Although user organizations can ex-

pect to bear the price of structural and systems changes wrought by PDES, suppliers themselves may not incur exorbitant costs in adopting the technology. "Currently, most of the differences between CAD/CAM vendors are in the applications solutions—not in the data bases themselves, and that is where PDES will reside," states M. Salahuddin Khan, director of automotive industrial marketing for Prime.

Suppliers will be seeking different avenues to take advantage of the new technology, Khan says. "From Prime's perspective, the development of technology is not as important as the building of applications to take advantage of that technology," he explains.

For users to seize such an advantage, they may have to push aside the other standards issues crowding their IS plates or at least balance them with a helping of PDES. GM and the other members of PDES Inc. have even showed a willingness to pay for this new item on the information-technology menu. And, after all, isn't what's good for General Motors good for everybody? □

The SAS System

More Choices, for More Applications, than Any Other Software.

The SAS System is the software you'll never outgrow. No other software offers so many choices for data management, analysis, and presentation. For any user—new computer user to seasoned pro. For any environment—PC to technical workstation to minicomputer to mainframe.

Choices to Build On. Start with a powerful English-like language and essential data management tools. Then take your pick of ready-to-use applications: statistical and mathematical analysis...report writing and color graphics... project management and quality control... forecasting and decision support.

Or build your own menu-driven applications—quickly and easily—with the SAS System's interactive applications development tool. Even first-time users can command the power of the SAS System... just by filling in the blanks.

Choices to Count On. More than a million users throughout the world—in business, industry, government, science, and education—have made the SAS System their #1 choice for data analysis and color graphics. And every SAS System application is backed by expert technical support, documentation, and training.

We'll tell you more in a free 12-page executive summary. Just give us a call at (919) 467-8000. In Canada, call (416) 443-9811.

Reader Vote

Advertising Contest Winners!

Congratulations to the following advertisers, the five winners of DATAMATION's Reader Vote Contest. Their ads in the January 1 issue were judged to be most informative and most helpful by DATAMATION's readers:

Adobe Systems Incorporated

Humpal, Leftwich & Sinn, Mountain View, CA

Cincom Systems, Inc.

Tepe, Hensler & Westerkamp, Inc., Cincinnati, OH

Dell Computer Corporation

Chiat/Day, San Francisco, CA

Hewlett-Packard Company

Leo Burnett, Chicago, IL

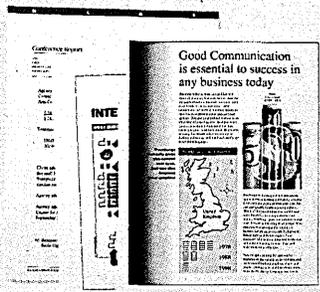

Tektronix, Inc.

In-house agency

Over two thousand readers participated in the Reader Vote Contest, and here on the following pages, are the ads these Information Systems professionals chose as the winners.

NOW THERE ARE TO THE POST

PostScript printers and typesetters offer a variety of resolutions, paper handling options and printer speeds, as well as black & white and color output.

In just three years, the PostScript language has been adopted by more than 25 of the world's leading computer equipment manufacturers.

Agfa-Gevaert Apollo Computer
Apple Computer AST Research
Autologic Dataproducts Diconix
Digital Equipment Corporation Fujitsu
General Computer Hewlett-Packard IBM
Linotype Matsushita Monotype NBI
NEC NeXT QMS Quadram
Qume Ricoh R.R. Donnelley
Scitex Texas Instruments
Varityper Wang

More than 3,000 software programs—for minicomputers, mainframes, workstations and personal computers—support the PostScript language.

THE OUTSIDE. To professionally print words and pictures on the same page, all you need are laser printers and typesetters that speak the right language. The language of PostScript.

As the standard page description language of electronic publishing,

 Look for this symbol on computers, printers and other products that support PostScript software from Adobe Systems. It's your guarantee of quality and compatibility.

PostScript software from Adobe Systems is your key to complete device independence—giving you the freedom to select the right hardware, software and vendors for your needs and budget.

Isn't it time you put the power of PostScript on your side?

Adobe and PostScript are registered trademarks and the Adobe logo, the PostScript logo, and Display PostScript are trademarks of Adobe Systems Incorporated. RE TWO SIDES SCRIPT® STORY.

digital

IBM

Computers and workstations with the Display PostScript system deliver a variety of screen resolutions in black & white, grayscale and color.

Display PostScript is already the graphics standard for a new generation of computer and workstation displays from these manufacturers.

Taking advantage of enhanced software portability, applications with greater power and potential are already emerging to support Display PostScript.

THE IN SIDE.

Introducing Display PostScript™ from Adobe. With the same imaging standard and language used in PostScript printers, this system software module is now in computer and workstation displays.

And because it's transparently integrated over a variety of operating systems, Display PostScript is your key to hardware compatibility and software portability.

Take advantage of a powerful, new graphics standard for today—and tomorrow. Be sure to insist on the Display PostScript system.

If you'd like more inside information about PostScript software and/or the Display PostScript system, call 800-29-ADOBE.

ADOBE™
SYSTEMS INCORPORATED

WHY YOU SHOULD CON 386 SYSTEMS, DESPITE THEIR

Our new 386-based systems are priced about 35% less than comparable systems—like Compaq's. Which may make you wonder if we've left something important out. Like high performance.

Well we haven't.

In fact, these are among the fastest 386-based systems available. With more advanced features than you'd get in systems that list for up to \$3000 more.

Like Compaq's.

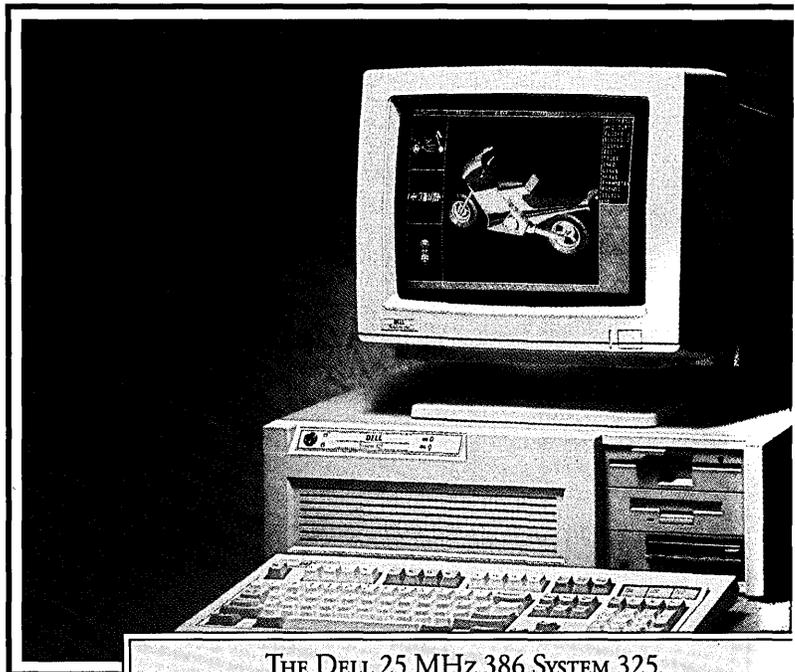

For instance, our 20 MHz System 310 offers you the most extraordinary value available in any 386-based system. It's the machine that PC Magazine (6/14/88) described as "fast enough to burn the sand off a desert floor."

AND IF THAT SOUNDS FAST, WAIT TILL YOU SEE OUR NEW 25 MHz 386-BASED SYSTEM.

At 25 MHz, our new System 325 offers you the highest possible performance in a 386.

Like the System 310, it utilizes the very latest technology, including the Intel 82385 Cache Memory Controller, advanced 32-bit architecture and high performance drives. And of course, both systems are fully IBM PC compatible.

But speed isn't the only reason to buy from Dell. Or even the best.

THE DELL 25 MHz 386 SYSTEM 325.

STANDARD FEATURES: • Intel 80386 microprocessor running at 25 MHz. • 1 MB of RAM* expandable to 16 MB using a dedicated high speed 32-bit memory slot. • Advanced Intel 82385 Cache Memory Controller with 32 KB of high speed static RAM cache. • Page mode interleaved memory architecture. • VGA systems include a high performance 16-bit video adapter. • Socket for 25 MHz Intel 80387 or 25 MHz WEITEK 3167 math coprocessor. • 5.25" 1.2 MB or 3.5" 1.44 MB diskette drive. • Enhanced 101-key keyboard. • 1 parallel and 2 serial ports. • 200-watt power supply. • 8 industry standard expansion slots.

**Lease for as low as \$252/Month.

The Dell System 325 is an FCC Class A device, intended for business use only.

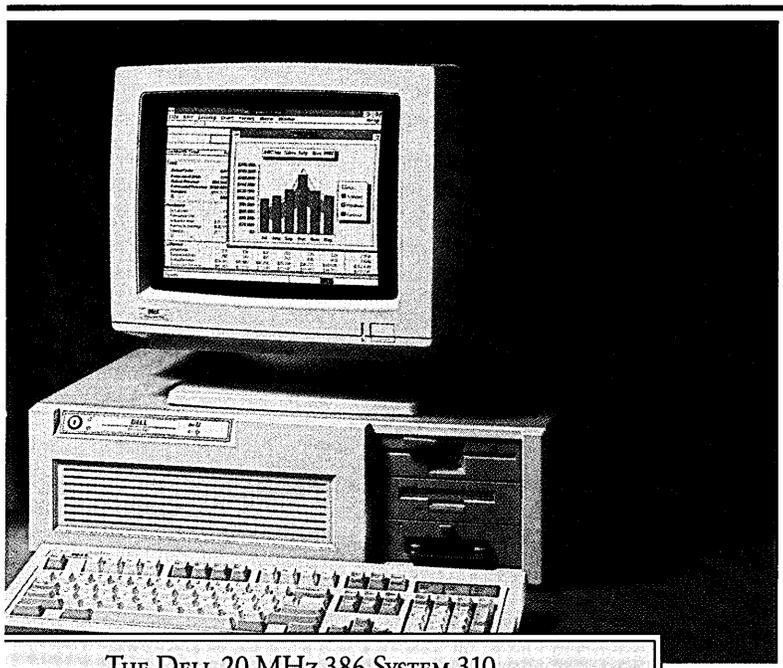

SYSTEM 325 Hard Disk Drives	WITH MONITOR & ADAPTER	
	VGA Mono	VGA Color Plus
150MB-18ms ESDI	\$6,999	\$7,299
322MB-18ms ESDI	\$8,999	\$9,299

SYSTEM 325 AND 310 OPTIONS: • Intel 80387 math coprocessor: 25 MHz for 325; 20 MHz for 310. • 1 MB or 4 MB memory upgrade kit. • 2 MB or 8 MB memory expansion board kit. • Dell Enhanced Microsoft MS-DOS 3.3. • Dell Enhanced Microsoft MS-DOS 4.0. • Both

MS-DOS versions with disk cache and other utilities. • Dell Enhanced MS* OS/2. *640 KB is available for programs and data. The remaining 384 KB is reserved for use by the system to enhance performance.

Prices no longer in effect

TOLL-FREE SUPPORT AND ON-SITE SERVICE INCLUDED IN THE PRICE.

Every Dell system includes a complete set of diagnostic tools. So troubleshooting is easy. In fact, most problems can be resolved over our toll-free support line. It's staffed by Dell's own expert technicians from 7 AM to 7 PM (CT) every business day.

TO ORDER, PLEASE CALL

800-426-5150

IN CANADA, CALL 800-387-5752

And if your system requires hands-on service, a technician will be at your location the next business day. At no cost to you.◊

Included in the price of your system is a full year of on-site service.

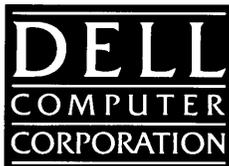

But that's not all. You're also protected by our 30-day money-back guarantee. And our one-year limited warranty on parts and workmanship.△

AND IF YOU STILL THINK YOU GET WHAT YOU PAY FOR, CONSIDER THIS.

When you buy from Dell, you buy directly from our manufacturing facility in Austin, Texas. Which means we eliminate dealer mark-ups, allowing us to give you a lot more 386 for less. We can even design a custom lease plan for your business, which gives you another way to save.

So go beyond your suspicions. Call us at (800) 426-5150 and order the system that's right for you.

business needs, we will help you select the features that are right for you. After your system unit is custom built, we burn-in everything to make sure the entire system works perfectly.

Why Treat The Symptoms Of Network And Systems Pains When You Can Have The Cure?

Losing sleep over Computer Operations nightmares?

The **SYS/MASTER™** component of **NET/MASTER™** gives you the automation you've only dreamed about. **SYS/MASTER** automates complex operations tasks and resolution of problems (even at remote sites).

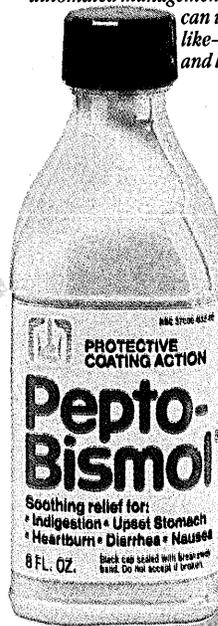

Feeling uneasy about Network Access and Security?

NET/MASTER gives you easy and secure network access for automated management of your network. Authorized users can utilize as many applications as they like—eliminating multiple terminals and long log-on procedures.

Tired of the bandage approach to Network Management?

The **NET/MASTER** Advanced Network Management component lets you take control of your network by automating the resolution of complex problems you're faced with daily. No matter what multi-vendor strategy or what architecture you choose, **NET/MASTER** is the place to start.

Finding it hard to stomach the usual File Transfer problems?

Transfer commercial volumes faster and more reliably than other software products or courier services. Automate the complete process of transferring and using data with the worry-free **NET/MASTER** File Transfer component.

Looking for relief from Help Desk headaches?

Give your Help Desk the serious tools they need to automate problem, change and configuration management tasks. **NET/MASTER** makes manual tasks a thing of the past.

Get **NET/MASTER™**. It's Serious Medicine.

Only **NET/MASTER** from Cincom® provides serious, permanent solutions with a comprehensive, fully integrated system of components: with easy installation and fast-acting implementation that gets right to the source of all your problems.

NET/MASTER lets you automate and manage your network and systems with greater control, efficiency and reliability than any product on the market today. And **NET/MASTER** gives you functionality and flexibility that

unmatched, single-solution products just can't provide.

Join over 700 organizations who have found permanent relief with **NET/MASTER**. To find out more, call us today, toll-free, at:

One of the most important reasons
for buying our new LaserJet IID printer
is on the other side of this page.

One of the most important reasons
for buying our new LaserJet IID printer
is on the other side of this page.

The latest member of the HP LaserJet printer family prints on both sides of the paper. But that's just the icing on the cake.

The LaserJet IID printer is full of new ideas for making paper-handling easier and more efficient.

An envelope feeder accessory, for one. Instead of having to feed envelopes manually, our new printer does it automatically.

You wanted more paper trays. So the LaserJet IID printer has two of them, each with a 200-sheet capacity. Give us more fonts, you said. And LaserJet

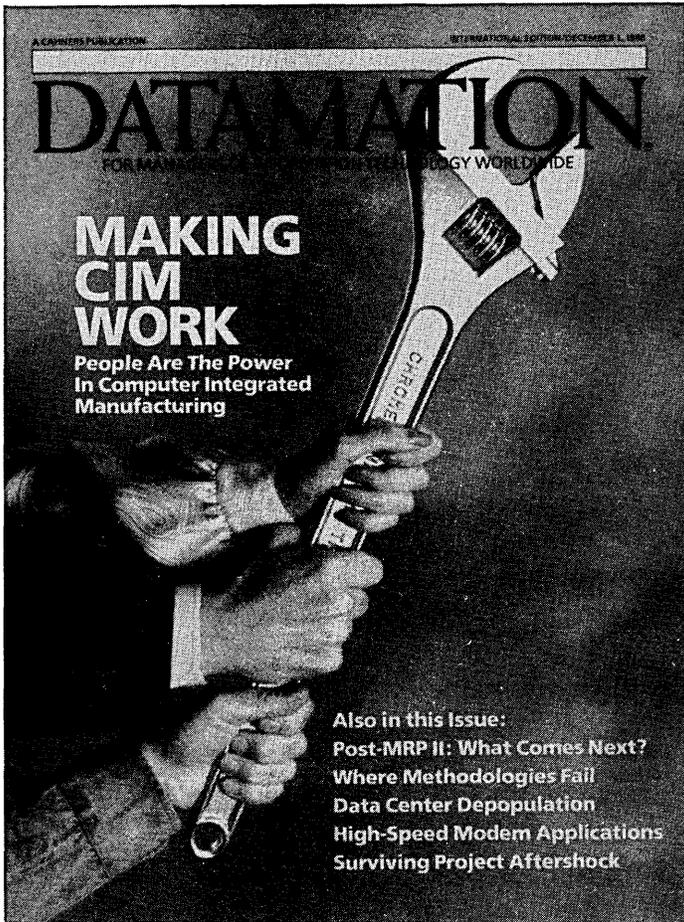

Series II compatibility. Done!

So now you have a choice of two HP LaserJet printers. Both with that superb quality for text and graphics you've come to expect from Hewlett-Packard.

All good reasons to call 1-800-752-0900, Ext. 297A for the name of your nearest dealer.

TEK 4211 GRAPHICS NETSTATION

The connectivity is riskless. With direct Ethernet LAN, RS232-C, and IBM coax hookup, Tek's new 4211 Graphics Netstation speaks your language. It even lets you switch instantly between DEC and IBM sessions.

The performance is riskless. You can't argue with a dual-processor machine fueled by Intel's 386SX and a specialized graphics processor. And watching your applications run at 40,000 vectors per

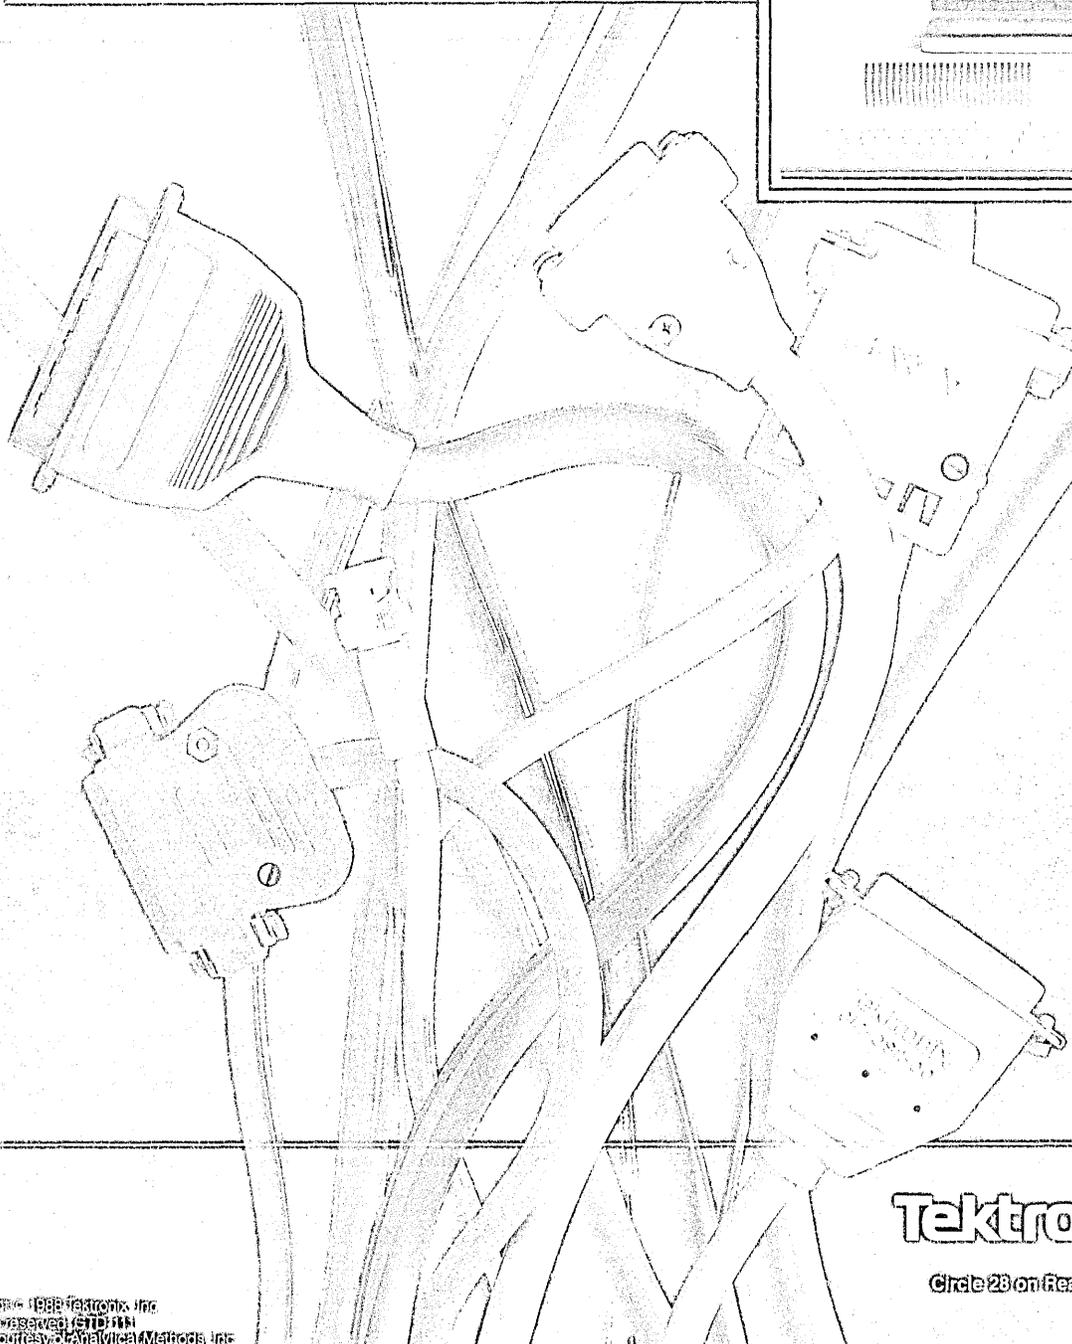

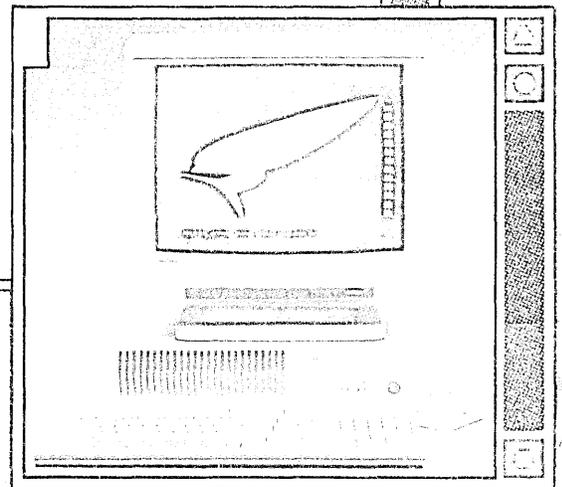

second, you won't argue with performance either.

The software solutions are riskless, too. Hundreds of applications—in CAD/CAM, mapping, manufacturing automation, drafting, and then some—are up and running right now. With the Netstation, porting hassles are history.

And the price? Much lower than anything in its performance class. Which also makes the 4211 Graphics Netstation a thoroughly

riskless choice—especially for those who don't like to take chances with their graphics investment.

To find out more, call **1-800-225-5434.**

Software superior by design

Hyundai Expands Product Line

New offerings include PCs, printers and modems.

BY JANE MAJKIEWICZ

THE SUPER-286N PC is Hyundai's new high-end AT-compatible PC.

Hyundai Electronics America has announced several additions to its PC product line, including an AT- and XT-compatible PC, a family of dot matrix printers and a line of modems.

The AT-compatible machine, named the Super-286N, runs at 6 megahertz or 12MHz and succeeds the company's previous high-end model, the 10MHz Super-286C. The computer comes standard with 64KB of ROM and 1 megabyte of RAM, expandable to 4MB. This 286-based AT system includes a standard 1.2MB, 5¼-inch floppy drive, with six expansion slots and space for four half-height disk drives. The system operates with a 200-watt power supply. The list price is \$1,595 for the 1.2MB floppy drive, or \$2,295 with an additional 40MB hard drive.

Hyundai says its Super-16X, an XT-compatible computer, has room for up to two 3½-inch, 720KB floppy drives and one 3½-inch hard drive. The PC was designed primarily with the first-time user in mind, but it is also suitable for educational environments, according to Hyundai. Based on the 8088-I microprocessor, the Super-16X includes as standard Microsoft Corp.'s software package, MS Works, which enables the user to run

word-processing, spreadsheets and data base and communication modules. Other standard features include the ability to switch speeds between 4.77 and 10MHz; 640KB of RAM and 32KB of ROM; four expansion slots; one serial and one parallel port; and an 80-watt power supply. Prices start at \$945 for a single 720KB floppy system. Configurations with two floppy drives are priced at \$1,075, and \$1,445 if one 30MB 3½-inch hard drive is added.

A four-model family of printers and four new modems make up Hyundai's most recent peripherals offerings. The new HDP dot matrix printers include two 9-pin and two 18-pin models with an output of 180 characters per second (cps) and 200 cps in draft mode, respectively. Hyundai says that the printers produce near letter quality printing at speeds of 34 cps for 9-pin printers and 100 cps for 18-pin printers. The 9-and-18 pin printers come with either a narrow or wide carriage. Pica, Elite and Italic typefaces are available for use with several paper sizes and forms. List prices range from \$259 to \$519.

Hyundai's two new external, stand-alone modems and two internal PC add-in card modems are Hayes-compatible. The four modems, called the HMD series, pro-

vide auto-dial, auto-answer and auto-speed features. The external modems, for RS 232C connections, support 300 to 2,400 bits per second (bps) for asynchronous and synchronous communications. The IBM PC-compatible, half-height add-in card modems also run at 300 to 2,400bps, for asynchronous communications. All of the modems have either half- or full-duplex transmission capabilities. List prices range between \$59 and \$159. HYUNDAI ELECTRONICS AMERICA, San Jose, Calif.

SYSTEMS

Texas Instruments Offers Enhanced PCs

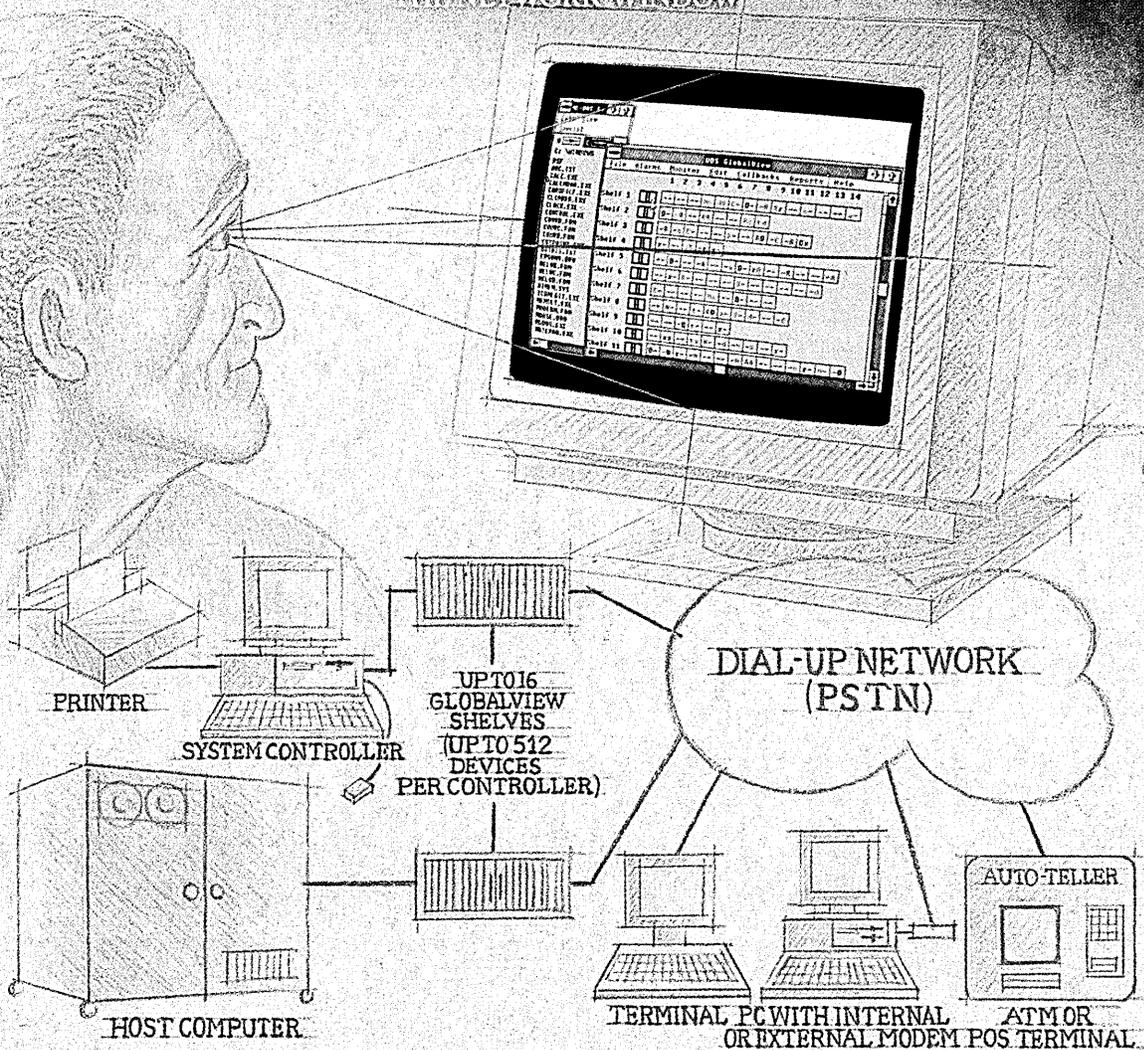

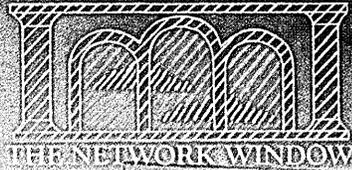

Texas Instruments Inc. has boosted the memory capacity of its microExplorer line of Macintosh-based personal computers. The enhanced memory enables the machines to better accommodate storage-intensive artificial intelligence applications such as intelligent CAD, defense research systems and large knowledge-based applications.

The new systems, based on the Macintosh IIx, are available now and replace TI's microExplorer computer family based on the Macintosh II. Users can upgrade from the Macintosh II-based machine to the new Macintosh IIx-based machine. The new microExplorers offer 2MB more of Macintosh RAM than earlier microExplorer models and now provide 4MB of microExplorer RAM and 4MB of Macintosh RAM as a standard feature. Memory capacity can be expanded up to 20MB.

The systems are available with either a 40-, 80- or 160MB internal hard disk drive or a 330MB external drive. The systems also employ a microExplorer processor, based on industry standard NuBus architecture, which runs on all Apple NuBus platforms, including the recently introduced Macintosh IIcx.

A microExplorer system that includes 8MB RAM, a 40MB hard disk, a monochrome monitor and application software lists for \$16,645. A complete "de-

GlobalView™

A Classical Approach to Control Of Contemporary Dial-up Networks

The advantages of powerful, sophisticated network control systems, while available to managers of large leased-line networks, have been denied to dial-up network users. GlobalView ends that disparity.

Now you can monitor, configure and control as many as 512 local datacomm devices and any number of remote devices from a single location. You may control network security parameters,

trace problems to individual devices and oversee resource allocation. Real-time and historical reports are available via color monitor, with hard copy generated for later analysis.

GlobalView is comprised of an 80286-based PC controller, Microsoft® Windows-based software, a compact (7"×19") equipment rack and an evolving variety of modems, and other datacomm devices.

GlobalView is the classical solution to contemporary network management problems. For specifications, pricing and applications assistance, contact Universal Data Systems, 5000 Bradford Drive, Huntsville, AL 35805. Telephone 205/721-8000; FAX 205/721-8926.

Universal Data Systems

NEW PRODUCTS

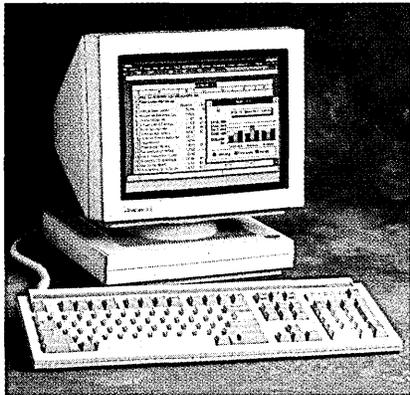

velopment" system, which allows users to develop their own applications by writing their own code, is available with larger amounts of disk space. A sample development system, with 12MB of microExplorer RAM; 4MB of Macintosh RAM; a 330MB disk; a high-resolution, 19-inch monitor; and development software, is priced at \$32,240. An optional networking software package is also available. TEXAS INSTRUMENTS INC., Data Systems Group, Austin, Texas.

Amdek Unveils Diskless Workstation

Amdek Corp., a subsidiary of Wyse Technology, announced a diskless local area network workstation meant to enable business users throughout a corporation to share resources over either an Ethernet or Token Ring local area network.

The Amdek System/286N was first made available last month and offers the processing power and graphics capability

THE AMDEK SYSTEM/286N enables business users to share resources.

of a 12.5MHz 286-based PC, according to Amdek. The workstation comes with 1MB of RAM, and its 14-inch display supports IBM's Video Graphics Array (VGA) standard. In addition, the system is compatible with other graphics display standards, including the Monochrome Display Adapter (MDA); Enhanced Graphic Adapter (EGA); Color Graphics Adapter (CGA); and the Hercules Graphics Card (HGC).

The suggested list price for the Amdek System/286N, including an integrated monitor, is \$1,999. AMDEK CORP., a subsidiary of Wyse Technology, San Jose, Calif.

Circle 152

SOFTWARE

CA's Graphics Support DECwindows

Computer Associates International Inc. has unveiled a graphic editing and drawing system for the VAX/VMS environment.

The product, named CA-SuperImage/VAX, enables graphic artists or graphics application developers to create illustrations in many ways. These include free-hand drawing; digitizing objects (using the mouse to copy an object on paper to the screen); and importing graphics images, industry-based clip art or backdrops. Editing features allow the user to mirror objects, copy images repeatedly through step-and-repeat functions, fit images to a grid through grid snapping and utilize object and point editing. The software runs on Digital VAX 2xxx, VAX 3xxx and GPX workstations and operates with Digital's DECwindows interface.

CA claims that CA-SuperImage/VAX works with approximately 300 graphic

output devices including terminals, plotters, laser printers and film recorders. The product is available for early release this month, and general distribution will begin in August. The price starts at \$2,800. COMPUTER ASSOCIATES INTERNATIONAL INC., Garden City, N.Y.

Circle 153

Digital Debuts Enhanced Software

Digital Equipment Corp. has introduced version 4.0 of its real-time application software, VAXELN.

The new version has added support for DECwindows, Digital's implementation of the industry standard X Window user interface. In addition, a new "set host" facility has been incorporated to enable real-time VAX systems to connect users via the windows with other VAX computers on a network, according to Digital. The software runs on a range of VAX computers, from the KA620 microcomputer to the rtVAX 6340 system. Digital says typical applications for its VAXELN

Automatic discovery of hidden knowledge in your database helps you make more informed decisions.

pre-programming is required. All that's needed is an IBM PC or compatible . . . and ASCII, dBase III, or Lotus format files.

Guide the direction of discovery by specifying parameters, or let IXL discover knowledge on its own for you. Inexact or omitted data is gracefully handled and you may specify the acceptance level for errors in your data. Put IXL on your case! Only \$490 for the PC, \$7500 for VAX/VMS. Ask us about our Expert System Software.

Easel makes it easy to migrate applications from hosts to programmable workstations.

Easel® for OS/2 Extended Edition is a full-featured development tool for creating programmable workstation-based graphical interfaces that can communicate with existing host 3270 applications. This lets you develop workstation applications without having to change host applications. It provides high-level language support (and WYSIWYG graphics) for developing EE applications that support Presentation Manager™ and Communications Manager. For more information contact your IBM representative.

DeScribe gives OS/2 users WYSIWYG word processor.

DeScribe™ conquers the gap between word processing and desktop publishing. DeScribe gives you advanced word processing combined with style sheets, flexible page layout and typographic controls. Since it runs under Presentation Manager, you benefit from the multi-tasking, multi-windowing environment. The WYSIWYG mouse-and-menu interface makes it easy to create professional quality documents. For additional information on DeScribe, call Lennane Advanced Products at 1 916 646-1111.

Lotus 1-2-3 Release 3 delivers advanced spreadsheet power to OS/2 users.

1-2-3® Release 3 delivers a new dimension of power and performance to OS/2 users. Release 3 integrates true 3D worksheets, powerful data base capabilities and high-impact business graphics. Of course, it's fully compatible with your existing 1-2-3 data and macros. Release 3 supports leading OS/2 networks and PostScript® output devices. For more information, see the Lotus® Authorized Reseller nearest you.

Maximize semiconductor manufacturing process with AIM—Advanced Interface for Micralign®

As part of Perkin-Elmer's commitment to provide the semiconductor industry with ways to improve productivity, they've developed an OS/2 version of Advanced Interface for Micralign (AIM™). This integrated system interfaces with the Perkin-Elmer Micralign 500/600 HT series and utilizes OS/2's advanced multitasking capabilities to monitor 50,000 processes for maximized machine utilization. AIM reduces the time semiconductor manufacturers spend on system setup and diagnostics, and it enables flexible storage and real-time information retrieval. For more information on how AIM can help dramatically improve your productivity, call Perkin-Elmer at 1 203 834-4725.

Free OS/2 Application Guide available.

You can receive a 340-page OS/2 Application Guide that lists and describes over 800 identified applications for OS/2. For a free copy of this guide call 1 800 IBM-2468, ext. 120.

NEW PRODUCTS

software include process control, medical monitoring and display.

License fees range from \$1,071 to \$25,833 for the basic development toolkit and from \$428 to \$32,340 for each runtime license for rtVAX systems. DIGITAL EQUIPMENT CORP., Maynard, Mass.

Circle 154

COMMUNICATIONS

PC-to-VAX Connection

Alphatronix Inc. has announced that it will make available during the third quarter this year a software utility to connect VAX workstations and PCs.

Alphatronix says its new product, called Bypass, is a data bridge or "dialect" that achieves connectivity through use of optical disks. The product enables a user to store data on a VAX, running under VMS, and write it to a removable, erasable optical disk in a DOS file format.

Bypass on the VAX is priced at \$1,100 per dialect and is distributed on optical disk. PC users can purchase the product for \$1,000 per dialect on optical disk or \$750 per floppy disk. ALPHATRONIX INC., Research Triangle Park, N.C.

Circle 155

Networking Flexibility

Network Software Associates Inc. (NSA) recently introduced a communications software package intended to combine the networking capabilities of three separate System Network Architecture (SNA) emulators.

The new product, designated the AdaptsNA SuperPak, works with NSA's AdaptsNA LAN product, a gateway for NETBIOS and Token Ring local area networks (LANs). AdaptsNA SuperPak enables PC and PS/2 workstation users who are attached to a NETBIOS LAN to communicate with a mainframe via one of three protocols. The user may select either the cooperative-processing LU6.2/APPC protocol (Logical Unit 6.2 Advanced Program-to-Program Communications); the interactive 3270 protocol; or the batch 3770/RJE (Remote Job Entry) protocol.

The AdaptsNA LAN product, which supports two workstations, is priced at \$995 and includes the AdaptsNA SuperPak. AdaptsNA LAN is also available in versions supporting up to 128 workstations, with prices up to \$5,995. NETWORK

SOFTWARE ASSOCIATES INC., Laguna Hills, Calif.

Circle 156

PERIPHERALS

Sharp Boasts Compact Printer

Sharp Electronics Corp. has unveiled a new laser printer intended to take up less space on the desktop.

Sharp's new laser printer, named the JX-9500, has footprint dimensions of 13.4 x 14.2 x 10.5 inches. Sharp claims the product addresses the need for laser quality printing on the desktop. The JX-9500 features include a resolution of 300 dots per inch and a printing speed of six pages per minute. The printer comes standard with a 250-sheet input and output tray and a manual feed slot. Available this month, the suggested price is \$1,995. SHARP ELECTRONICS CORP., Mahwah, N.J.

Circle 157

BRIEFS

On-Line Software International Inc. of Fort Lee, N.J., has brought out a new release of its **system repair and diagnostic tool** for IBM's Customer Information Control System (CICS) with several new features. STABILIZE Release 3.0 is available immediately with prices ranging from \$19,000 to \$44,000 for a permanent license.

Circle 158

Multi-Tech Systems Inc. of Mounds View, Minn., has introduced a 32-channel version of its MultiMux line of statistical multiplexers and additional standards support for its data compression modems. The **MultiMux32 multiplexers** are priced between \$3,495 and \$10,295. In addition, the company announced that its MultiModem224EH7, priced at \$649, will include MNP Class 7 Data Compression, CCITT V.25bis dialing and V.42 error correction.

Catch the Fourth Wave in an Inland Paradise.

Open Systems and Open Spaces for the Industry's Top Software Engineers!

Network computing based on "open," distributed systems. Appropriately dubbed "the fourth wave," it's the next act in computer technology's dazzling, unending performance. And what an enormous challenge it presents.

Yet few companies are as prepared to meet this challenge as Unisys Corporation's Network Computing Group.

NCG is an action-oriented team, organized and fine-tuned to respond to the demands of the open systems market. A team determined to develop networking solutions that offer rapid, cost-effective access to information across all platforms. This is a team of great talent and resource. And, right now, of great opportunity.

The Salt Lake City Good Life!

No other place offers opportunities for living like this! Explore the magnificent deserts and canyonlands of five spectacular national parks. Ski waist-deep powder just minutes from home. Camp, hike and climb in Utah's mighty Rockies.

Salt Lake City may be the West's best-kept secret! Entertainment and the arts flourish here. As do great nightlife, top professional sports and quality education. And all at a cost-of-living that's as affordable as it is enviable.

Software Engineers, Start Living!

If you're a top software engineer, explore this opportunity to tap NCG's determination to become the largest provider of open network systems in the world—in one of the most livable places in the country.

Minimum requirements include a B.S. in computer science or a related discipline and two or more years of experience in any of the following areas:

Database

Opportunities in UNIX-based RDBMS software installation, maintenance, support and development. IBM DB/2, etc.

Languages

You'll provide software development tools across UNIX platforms via COBOL, FORTRAN, Pascal, RPG III and/or Basic.

Data Entry Operations

Help us develop and support UNIX-based data entry products, focusing on DCR-UNIX and PC-to-UNIX communications

Secure UNIX

Develop UNIX-based systems for the National Computer Security Center (NCSC) and other DoD agencies in an environment that includes CompuSec and TCSEC.

On-Line Transaction Processing

Defining, developing and supporting transaction processing software includes Unisys UNIX hardware platforms.

UNIX Workstation

Development of a complete line of UNIX family-compatible workstations includes providing a consistent, sophisticated user interface for UNIX workstations and servers.

UNIX Standards

Help represent Unisys to the associations now determining the future of UNIX; add value to Unisys products through innovative software implementations.

Host Interconnect

Exciting opportunities to develop and port IBM and Unisys terminal emulators onto UNIX-based systems, integrate them into open communication systems, and apply new user interface technologies to traditional screens.

Systems Software

You'll help us develop and port new system software features and integrate them into the latest UNIX release; verify and evaluate systems software performance; and provide customer solutions through knowledge of UNIX internals and applications/OS interface.

Communications

UNIX-based data communications protocols and applications include local and wide area networking, SNA host communications, binary synchronous, UNISCOPE, A-series disciplines, and OSI, PC-based and defense data networks.

Please send your résumé, indicating your area of interest, to Unisys Corporation, Human Resources Department, NCG, 2222 North 2200 West, Salt Lake City, UT 84119. An affirmative action employer. Minorities encouraged to work.

UNISYS

HELP AUTOMATE THE HEALTH CARE INDUSTRY

OPPORTUNITIES FOR COMPUTER SCIENTISTS/ENGINEERS

Join the Industry leader at its Houston headquarters and help develop the next generation computer automation products for major hospital and laboratory customers. Advanced computer and software technologies will be utilized by creative product developers to supply state-of-the-art software on industry standard platforms. These challenges are available in the emerging high technology center of Texas, with low cost of living, affordable housing, and many attractive culture and recreational opportunities. Positions are available for:

SOFTWARE ENGINEERS AND MANAGERS

Entry level to 15 years experience in the development of software using structured lifecycle techniques. Interact with customers, define requirements, develop solution architectures and designs, install and support systems. All are important attributes of the assignments. A degree in engineering or computer science is required with advanced training desirable. Experience with UNIX, C, PL/1, Fortran or other high-order languages will be a plus. Exposure to work station technology, graphical user interfaces, networking protocol, mini or micro computer platforms, or conventional Healthcare applications are helpful skills. Successful management of projects involving 10 to 30 software developers is also required for management assignments.

HARDWARE ENGINEERS

Degree in electrical engineering and 10 years experience with mini/micro computer systems and peripherals, data communication products, and vendor evaluation. Excellent personal communication skills and willingness to work across organizational boundaries.

PROJECT MANAGERS

Two to five years of experience in computer system and software installations and customer application training. Knowledge of project management tools along with PC applications.

MANAGER OF HARDWARE SERVICES

5 to 10 years experience in the management of computer hardware field service personnel responsible for installations and maintenance of mini computer systems. Experienced with third-party maintenance vendors and hardware purchasing.

MANAGER OF IMPLEMENTATION

5 to 10 years experience in large system project management requiring management of multiple project teams. Degree in computer science or equivalent experience required. Knowledge of computer management tools a plus along with PC experience.

SUPPORT ANALYST

Provide first-line application support to customer base and assist in software operation problems. Degree in Computer Science or 2-3 years experience in data processing in healthcare environment desired. Fortran, "C", or other high-level languages is a plus. Must have good troubleshooting and communication skills.

SOFTWARE ENGINEERING TEAM-LEADER

Lead the development of networking/communications environment for the Healthcare industry. Create state-of-the-art tool set to support tomorrow's hospital information systems. Requires 7 plus years experience in system interfaces and networks with multiple protocols (Ethernet, Token Ring, SNA, TCD/IP, NFS). Advanced engineering degree a plus. Excellent interpersonal and leadership skills required.

**U.S. Citizen or U.S. permanent resident required.
If interested send resume and salary history in confidence to:**

**Director of Human Resources
5 Greenway Plaza, Suite 1900
Houston, Texas 77046**

Equal Opportunity Employer

LEADING EDGE TECHNOLOGICAL ENVIRONMENT

San Antonio, Texas

Work for the company that...

- Keys 5,200,000 full function IMS transactions daily (7 million projected by 1990)
- Is known for using technology as a strategic weapon
- Assisted in developing an "Image of the Future" for IBM*
- Has a 4-day work week
- Provides a flexible benefit package
- Works with tomorrow's technology...today

We are currently seeking **Systems Programmers** who have strengths in the following areas:

DATA BASE MANAGEMENT

- Requires 5 years experience in IMS application programming, including:
- Proven experience in design, performance and tuning of IMS databases
 - IMS application dump debugging skills
 - Experience with DB2 table maintenance a plus

IMS PERFORMANCE AND TUNING

- Requires 2-3 years IMS systems programming experience with:
- IMS application programming skills
 - Knowledge of MVS/ESA concepts, IMS internals and basic performance management tools

CICS SYSTEMS PROGRAMMER

- Requires 1-2 years experience as a CICS Systems Programmer, including:
- Experience in CICS programming, dump debugging, SMPE maintenance and system administration
 - Knowledge of MVS/ESA concepts and CICS internals (1.6 or higher)
 - Experience with MRO and ISC a plus

NETWORK MANAGEMENT SUPPORT

- Requires a minimum 8 years experience in IBM's Systems Network Architecture with:
- Proven understanding of SNA Control and Flow, Problem Determination, and transmission protocols
 - Proven experience in VTAM, NCP, Netview and Communication Controllers
 - Experience in Network Capacity Planning, Modeling, Tuning, Automating and Monitoring

STRATEGIC SYSTEMS DEVELOPMENT

- Requires 3-5 years experience in systems programming on large IBM mainframe with:
- Emphasis on CICS

San Antonio, the 9th largest city in the U.S., has many amenities to offer...a scenic Riverwalk, the symphony, live theater, fine dining, night life, professional sports, cultural events, as well as 5 major institutions of higher education.

Qualified candidates please send resume to:

**USAA
USAA Building
San Antonio, Texas 78288
Attn: Employment & Placement/TLL DM 71**

*As appeared in IBM's full page ad in "The Wall Street Journal", September 23, 1988. An Equal Opportunity Employer, M/F. Principals only, please.

Large-Scale Population of Achievers

Amdahl's professionals have world-class ability. The outstanding performance of our company and products proves this statement.

Around the world, more than 8,000 individuals are supporting and advancing Amdahl's large-scale, high performance computer systems. Their achievements have made us an undisputed leader in hardware, storage products, communication systems and software.

The caliber of our team will be incentive for you. Expectation levels will challenge you. Projects will demand new ideas, techniques and solutions. You will be in the midst of proficient people who achieve quality results in a timely fashion.

As large as we are worldwide, our teams are structured for visibility and individuality. If you expect the best from your company, your co-workers and yourself, achieve it—with Amdahl.

TECHNICAL PUBLICATIONS Technical Writers

UTS* (UNIX)** Amdahl is the industry leader in bringing UNIX to the mainframe world. Join our accomplished team of writers who are upgrading user documentation to match the increased usability and power of our product. This position requires a working knowledge of UNIX internals as well as a detailed knowledge of externals and tools.

Data Communications Join our technical writing team supporting our new line of communications products. Opportunities exist for software writing specialists experienced in documenting SNA, Network Management Architecture, X.21/X.25, or state-of-the-art front end processors.

Operating System A position exists for a writer with significant experience documenting large-scale operating systems. Experience with MVS/VM a plus.

Programming Languages Help document the languages and tools of the industry's next super computer success. Experience writing Fortran and/or C language manuals required. Knowledge of UNIX a plus.

Hardware Get involved in the computer systems of the 90s now. We are looking for experienced hardware writers who can work closely with our Development and Customer Services groups to document maintenance strategies of the next decade. Experience with large scale mini or mainframe computers required. BSEE or equivalent experience required, field service experience preferred.

**Publications Planner/
Project Manager** Help Amdahl leapfrog the competition into electronic technical manuals for the 21st century. Investigate feasibility of such things as on-line documentation, CD-ROM delivery and on-demand printing. You will manage projects from research to implementation. This position requires an MS in Computer Science or equivalent training and experience.

Please send your resume to Barbara Kvek at Mail Stop 300.

PROCESSOR SIMULATION DEVELOPMENT

Managing a team of systems programmers, you'll lead the effort to research and develop an architectural simulator that will be applied to the creation of future Amdahl processors. Additionally, this department is responsible for unattended operations product support. Your administrative skills will come into play for capacity planning and budgeting efforts. Throughout, strong interpersonal and written communication skills will be essential for success.

Manager The technical leader we seek will have a BSCS/EE, or equivalent, 7+ years' experience with software development, 370 architecture and VM operating systems. Background must also include 3+ years' management responsibility.

Please call Marianne Kilkenny at (800) 538-8460, extension 6191, or send your resume to her at Mail Stop 300.

DESIGN AUTOMATION Develop strategic tools which take our mainframe designs from concept and verification through manufacturing. Use

your 3+ years' extensive design automation experience including C and UNIX based technical skills for the following challenges.

Simulation Apply your knowledge of logic and functional simulation and your interest in working with outstanding people to develop simulation capabilities others have dreamed of—significant processing power (multiple Amdahl mainframes) for software simulation and special-purpose simulation accelerators.

Design Verification Contribute to the development of design automation software as a member of Amdahl's Design Rule Checking Team developing CAD/CAE software which analyzes gate-level hardware designs for technology violations.

Test Generation Use your knowledge of test generation and desire to work with outstanding engineers to develop software to support the testing of the most complex mainframe technology in the world.

Timing Analysis Use your knowledge of timing analysis and technologies to build a multi-technology system-level speed analysis tool. Amdahl has succeeded in part by "squeezing time" out of technology.

Please call Ranell Durgan at (800) 538-8460, extension 6216, or send your resume to her at Mail Stop 300.

One of the best benefits Amdahl provides you is our full support and commitment. Accordingly, our competitive salaries and comprehensive benefits program are first-class.

Send your resume to Amdahl Corporation, Employment Department 7-3, P.O. Box 3470, Mail Stop 300, Sunnyvale, CA 94088-3470. Principals only, please.

Amdahl is proud to be an equal opportunity employer through affirmative action.

*UTS is a registered trademark of Amdahl Corporation.

**UNIX is a registered trademark of AT&T.

Expect The Best

IF YOU WANT TO GET TECHNICAL ALL JOB FAIRS ARE NOT THE SAME

And this one is *really* different! Where else can you get a complete selection of career development seminars? Resumé evaluations? A special day for minority professionals? And the opportunity to meet with more than 50 leading local and national employers? All for FREE! At CCC you will learn how to go about getting the job you want, and then, go get it!

DISCOVER THOUSANDS OF CAREER OPPORTUNITIES!

Leading local and national employers have made a commitment to come and meet experienced professionals like you. Use your FREE admission ticket to meet the companies you are interested in. Invest the time to explore thousands of career opportunities, many of which may never be advertised, and visit with recruiting and technical managers who are ready to hire qualified individuals with three or more years experience.

TAKE YOUR CHOICE OF 15 FREE CAREER SEMINARS!

The opening seminar session each day, *How to Make the Most of a Career Convention*, gives you inside tips and specific techniques that will maximize your effectiveness at these events. A total of 15 seminar sessions over three days include such topics as:

- *Preparing a Winning Resumé*
- *Starting Your Job Search Right*
- *How to Win the Interviewing Game*
- *The Art of Networking: One-on-One*
- *Marketing Yourself Effectively* and others...

And, you can attend a special Q & A session -- *Recruiters' Roundtable* -- an open forum where a panel of employers candidly answer questions you'd never be able to ask in an interview.

In addition to the seminar sessions, resumé experts are on-site, in the exhibition hall to QA your resumé for FREE, so you can start having it screen you in, not out.

We are not an employment agency. No registration required. All companies are direct, Equal Opportunity Employers.

AT THE SHERATON WASHINGTON

At the corner of Connecticut Ave and Woodley Road (Woodley Park/Zoo metro stop). Northbound: exit Rock Creek Parkway at 24th St./Connecticut Ave; Southbound: exit #33 off 495.

Datamation Databank

Professional Profile

Announcing a new placement service for data processing professionals!

Datamation feels an obligation to help its readers advance their careers. So, Datamation has affiliated itself with Placement Services, Ltd. to form the **Datamation Databank**. What are the advantages of this new service?

- Your qualifications and career goals are entered into PSL's computer system. And the computer never forgets. When your type of job comes up, it remembers you're qualified.
- It's absolutely free. There are no charges,

fees or obligations to you as a Datamation reader.

- Service is nationwide. You'll be considered for openings across the U.S. by PSL and their affiliated offices.
- Your identity is protected. Your resume is carefully screened to be sure it will not be sent to your company or parent organization.
- Your background and career objectives will periodically be reviewed with you by a

PSL professional placement person to ensure current information.

We hope you're happy in your current position. At the same time, chances are there is an ideal job you'd prefer if you knew about it.

That's why it makes sense for you to register with the **Datamation Databank**. To do so, just mail the completed form below (with a copy of your resume) to **Placement Services, Ltd., Inc.**

PRICE YOUR EXPERIENCE.

TECH FAIR is the easy and confidential way to find out what you're worth in today's job market.

You'll meet recruiters and top line management from the nation's top technical companies. You'll discover fresh, new professional challenges. And you'll learn what you're *really* worth in today's job market.

Representatives from leading corporations will be on hand to interview qualified candidates at the following TECH FAIR locations:

May 22, The Peabody, Orlando
May 23, Airport Hilton, Melbourne, FL
June 12-13, Boston Marriott, Burlington, MA
June 14, The Hilton, Merrimack, NH
June 22-23, Washington, DC
June 26-27, Los Angeles
July 24-25, St. Louis
August 28-29, Boston
September 18, Columbia
September 19-20, Washington, DC
September 25-26, Denver

September 27, Colorado Springs
October 2-3, Dallas
October 16-17, Los Angeles
October 18, Woodland Hills, CA
October 23-24, Minneapolis
November 6-7, Chicago
November 13-14, Boston
November 15, Braintree, MA
November 20-21, Washington, DC
December 4, Orlando
December 5, Melbourne, FL

So come to the next BPI TECH FAIR in your area. It may be well worth your while.

TECH FAIR[®]
THE NATION'S #1 JOB FAIR FOR ENGINEERING, SYSTEMS & SOFTWARE DEVELOPMENT PROFESSIONALS

2985 Multifoods Tower • 33 South Sixth Street • Minneapolis, MN 55402 • (612) 370-0550

Systems software for MVS data centers:

Enter the world of total performance measurement, total support.

Computer Associates presents the industry's first integrated solution incorporating performance measurement, capacity planning, resource management, network monitoring and job accounting:

CA-UNIPACK™/PMA PERFORMANCE MEASUREMENT AND ACCOUNTING

Consisting of CA-FASTDASD™, CA-ISS/THREE™, CA-MAZDAMON™, CA-JARS®, CA-JARS®/CICS, CA-JARS® DSA, CA-LOOK® and CA-MINDOVER®

With **CA-UNIPACK/PMA**, you can fine tune your system, improving its performance and optimizing the utilization of resources. You can reduce costs by accurately forecasting future hardware needs thereby avoiding unnecessary and costly additions or upgrades. You can accurately charge back costs to end users,

allowing you to treat the data center as a profit center. And most importantly, you can easily achieve the CICS response times end users expect, enabling you to consistently maintain service level agreements.

Only Computer Associates has the proven products and expertise to offer this cost-effective, total performance solution.

And only Computer Associates offers **CA-UNISERVICE®/II**, a secure link between your mainframe and CA's Customer Service System 24 hours a day. You get online access to software fixes, interactive problem resolution, plus product tutorials and more! No one else has anything like it.

ShowCASE Conference IV

INTEGRATING AUTOMATED DEVELOPMENT ENVIRONMENTS: THE FUTURE OF APPLICATIONS DEVELOPMENT

SUCH EXCELLENT SPEAKERS AS

Ed Yourdon, Vaughan Merlyn,

Larry Constantine, Capers Jones

INCLUDING

Insightful Panel Discussions

"CASE Users," "Change Management & CASE,"

"CASE Industry Watchers," "CASE Research"

State-of-the-art CASE Research Presentation

In-depth, Selected Vendor Product Sessions

Four one-hour sessions featuring concurrent presentations
by 15 selected CASE vendors

PLUS

October 9 or 12, 1989

Optional pre- and post-conference *CASE Tutorials*

Both days offer "An Overview of CASE," and "Evaluating CASE Tools"

WHAT OTHER ATTENDEES HAVE SAID

"Very good! Well organized! Great speakers!"

"This was an excellent conference! It brought together outstanding speakers
and was extremely well organized."

"An excellent conference overall! All sessions were good and added
different views on the subject."

"All of the sessions were excellent — a job well done!"

OCTOBER 10-11, 1989

To register or receive more detailed information, call Kim Yourick at (314) 889-5380 and tell her you saw this ad
in DATAMATION. The cost of ShowCASE IV:

\$795 per person,

\$750 if registered and paid by September 1, 1989,

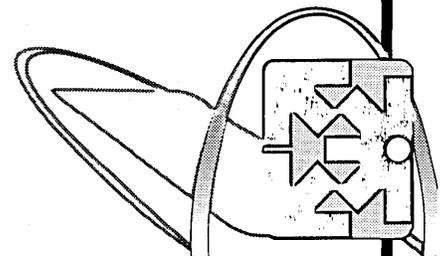

\$695 per person for more than one registration per company.

Tutorial prices:

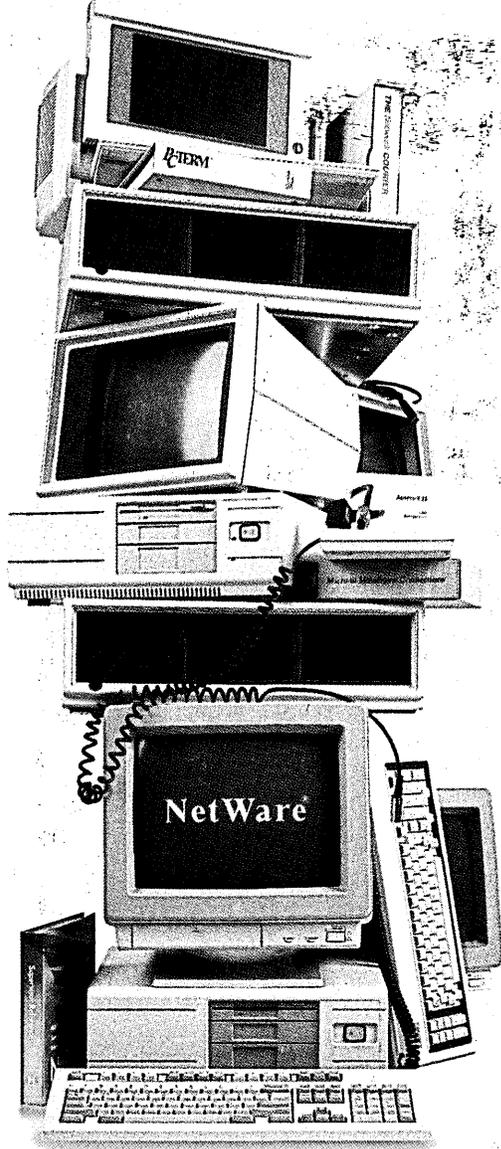

\$125 per session for conference attendees,

\$175 per session for nonconference registrants.

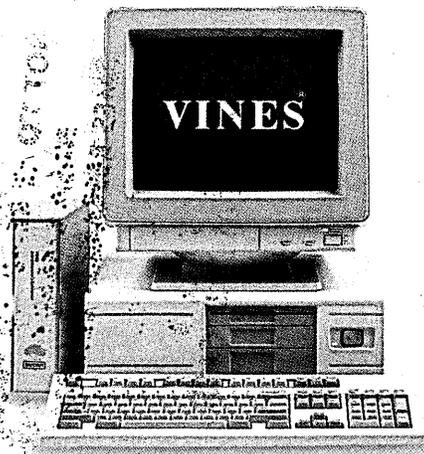

Presented by the Center for the Study of Data Processing, School of Technology and
Information Management, School of Engineering and Applied Science, Washington
University in St. Louis, in conjunction with the CASE Studies Consortium.

Now there are two ways to drive your network on a 386.

Manual.

Automatic.

Novell went to a lot of effort to get NetWare™ to perform on a 386™ Microprocessor. But you'd have to go to considerably more effort to get it to perform like VINES®.

Unlike its competitors VINES is based on an international standard, UNIX®. So applications and communications programs are easy to integrate. That's why capabilities for E-mail, X.25, SNA and async are already included. And since VINES was built from the start to integrate anything from a PC cluster to an enterprise-wide network, it has one big advantage. A global naming system called StreetTalk™.

Which is nothing new to the VINES users who've been enjoying proven 386 performance for over a year. But to those who are still waiting for NetWare to catch up, remember, it's never too late to shift gears.

BANYAN Networks for those who think big.

Banyan Systems, 115 Flanders Road, Westboro, MA 01581 1-800-828-2404

VINES is a registered trademark and StreetTalk is a trademark of Banyan Systems, Inc. UNIX is a registered trademark of AT&T. NetWare is a trademark of Novell, Inc. 386 is a trademark of Intel Corporation.
