Burroughs CMS Thrift System

Comprehensive, Proven and Extremely Responsive to Change

You Benefit

Burroughs CMS Thrift System is a complete and comprehensive set of computer-based programs specifically designed to meet the data processing needs of Thrift institutions.

The system provides the power and capabilities to automate the multitude of accounting and processing functions normally associated with customer transactions and other day-to-day operations. It provides advanced "state-of-the-art" processing for both single-office and multi-branch institutions at a truly economical cost.

The system enables you to effect maximum control of your institution through in-house processing and timely, accurate reporting of management information . . . when and where it's needed. The improved flow of information can help you manage your institution more efficiently, effectively and profitably.

Flexibility for Growth

The CMS Thrift System is comprised of program modules so that implementation can proceed in an orderly, step-by-step fashion at a pace that meets your plans and schedules. Because of its modularity, you may install all or any part of the system now and add other modules and options as future requirements dictate.

The system can be used with a wide variety of Burroughs CMS Computer Systems. These computers are extremely powerful yet low-cost and truly effective. They provide the processing power, capabilities and features usually found only in much larger, more expensive systems. Burroughs CMS systems are easy to operate. Current members of your staff can easily and rapidly become highly productive and proficient in system use with only minimal training. And, all CMS systems utilize "human-oriented" software that actually guides operators as they run the system.

There are CMS computer configurations to match the transaction volumes and processing requirements of your institution.

And, as your needs grow and change, Burroughs systems can easily and economically grow with you without costly reprogramming and conversion because the CMS computers are fully compatible with one another. Your program investment is thoroughly protected because the CMS Thrift System is completely "transportable" from one CMS system to another.

A wide variety of peripherals, plus financial and management terminals can be used with the CMS computers. This broad selection enables you to configure a system and terminal network that meets your requirements.

An Effective Management Tool

Burroughs CMS Thrift System, along with Burroughs CMS computers can help you successfully compete in today's financial marketplace while reducing operating costs . . . improving teller accuracy and efficiency . . . increasing customer services . . . and providing a constant flow of current, decision-making information to your management.

A System for Today and the Future

Your Customers Benefit

Burroughs CMS Thrift System allows you to provide your customers with improved service because transactions are completed quickly and accurately with complete in-house control.

Customers can have immediate answers to their inquiries because your tellers have instant access to customer account information. And, your customers can be assured that changes in names, addresses and other important information are made quickly and accurately.

The system provides maximum security through a system of warnings, lock-outs and transaction limits. Of course, system security is defined and controlled by your institution.

In-house computerization enables you to easily and efficiently offer a multitude of new "convenience" service concepts, such as electronic funds transfer (EFT), truncation of items and usage of customer activated service units.

With the CMS Thrift System, your association can easily implement plastic card plans . . . direct payroll deposit . . . direct Social Security deposit . . . and the use of 24-hour Automatic Teller Machines (ATMs).

Your customers can also have the privacy and convenience of making their own account inquiries without teller intervention. By using Burroughs Customer Inquiry devices, authorized customers may use their plastic cards and Personal Identification Numbers (PINs) to gain instant access to data concerning their accounts.

Burroughs CMS Thrift System can have an immediate and positive impact on your institution and its customers. It can help you expand your market . . . offer new services . . . gain new customers . . . and increase your profitability. It provides the power, flexibility and results you need today and in the future.

Powerful Processing and Comprehensive Reporting

Improved Accuracy and Efficiency

The CMS Thrift System provides powerful processing and extensive management reporting capabilities for numerous account types.
These include:

- NOW/Demand Deposit.
- Regular Savings (Passbook or Statement).
- Club Savings.
- Money Market Certificates.
- Certificates of Deposit.
- Special Earnings.
- IRA.
- Keogh Plan.
- Mortgage Loans (Conventional, FHA and VA).
- Construction Loans.
- Loans in Process.
- Home Improvement Loans.
- Mobile Home Loans.
- Passbook Loans.
- Student Loans.
- Installment Loans.
- General Ledger.

Outstanding System Features

- Full on-line real time processing and updating on all customer service applications.

- The amount of on-line customer history is virtually limitless. This information can be instantly available for inquiries and reporting.

- On-line new account set-up permits customer service to begin immediately.

- Through on-line inquiry, customer account information can be accessed by simply indexing the customer's name, part of the name or the account number.

- On-line file maintenance enables you to update customer files as soon as new information is available.

- You may choose from several options to cover overdrawn NOW/Demand Deposit accounts with funds from a line-of-credit account or from a regular savings account.

- Tellers can be quickly and thoroughly trained using the system's "teller-training" mode. Training transactions may be processed concurrently with actual live transactions but do not affect totals and histories.

- Automatic interface to Burroughs Financial General Ledger Module reduces posting time and eliminates potential errors.

- Using Burroughs CMS DOMAIN™ System in conjunction with the CMS Thrift System enables you to easily customize your own inquiry and file maintenance transactions to meet your institution's particular requirements.

- Customized reports are quickly and easily prepared by using Burroughs CMS REPORTER and On-Line REPORTER systems. These customized reports are in addition to those standard reports generated by the CMS Thrift System.

Burroughs Full Support Can Help You Achieve a Successful Thrift System Installation

With Burroughs, you'll have more than just a sophisticated piece of hardware. You'll have the full support of a worldwide company dedicated exclusively to equipment and systems for data processing.

Years of Experience and Proven Successful Operation

Burroughs has demonstrated its ability to justify your confidence and trust through many years of successful operation.

- Worldwide Operations.
- Nearly a Century of Experience.
- Recognition as One of the Industry Leaders.
- Continual and Successful Growth.

Application Programs

Burroughs is committed to providing outstanding application programs to the Thrift industry. On-going enhancements and support of the CMS Thrift System assure you of continuous "state-of-the-art", cost-effective processing power. Burroughs standard CMS Thrift System is available to your institution at a fraction of its original development and maintenance cost.

Standard Forms

Standard forms, journals and other documents, as well as passbooks, are available from Burroughs Office Products Group/Business Forms Division. These standard forms further reduce the time and cost to implement your CMS Thrift System.

Office Products

Burroughs Office Products Group can improve the efficiency of your operation with outstanding office products such as facsimile transmission equipment, word processing systems, document encoders and protection equipment, plus a complete line of office supplies.

Service and Support

Our professional field engineers will keep your CMS System operating at peak efficiency. They also have a complete line of data processing supplies available.

Education

Our customer education staff will train your personnel in every aspect of the CMS Thrift System's implementation and operation. Your people will be provided with ample time and personalized instruction in well-equipped facilities to thoroughly learn all aspects of the CMS hardware and application programs.
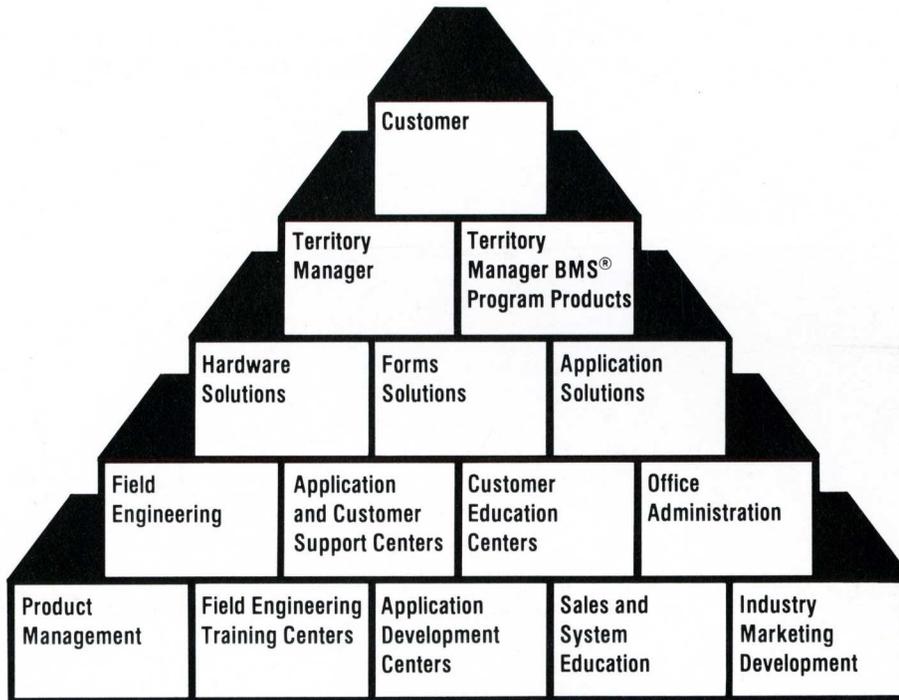

Customer Support "Hot Line"

Our CMS Thrift Management System experts are immediately available to your institution via Burroughs Customer Support "Hot Line". Via a telephone call to a Burroughs Customer Support Center, our experts can provide in-depth answers to your installation and operational questions.
