Assembler run totals	4625	00:00:30.81	00:00:39.54

```
The working set limit was 4000 pages.
592008 bytes (1157 pages) of virtual memory were used to buffer the intermediate code.
There were 70 pages of symbol table space allocated to hold 1074 non-local and 441 local symbols.
4108 source lines were read in Pass 1, producing 114 object records in Pass 2.
141 pages of virtual memory were used to define 41 macros.
```

0000    32 ;
0000    33 ; ENVIRONMENT:
0000    34 ;
0000    35 ; AUTHOR:       KEN CHAPMAN     10-NOV-77       VERSION 01.
0000    36 ;
0000    37 ; MODIFIED BY:
0000    38 ;                KEN CHAPMAN     30-NOV-77       VERSION 02
0000    39 ;       01       FIXED $DS_WAITMS_L TO WAKE IN USER MODE.  (DSPR #65)
0000    40 ;                CHANGED $SETIMR TO RETURN A WARNING IF IPL IS TOO HIGH.
0000    41 ;                  (DSPR #53).
0000    42 ;
0000    43 ;                TOM SOUTTER     22-FEB-78       VERSION 03
0000    44 ;       02       INSTALLED EXE$GL_ABSTIM (NON-FUNCTIONAL)
0000    45 ;                TOM SOUTTER      2-MAR-78
0000    46 ;       03       CONVERTED SETIMR & TIMSRV ROUTINES TO USE VMS ASTDEL
0000    47 ;                TOM SOUTTER     23-MAR-78
0000    48 ;       04       TURN ON SYSTEM REAL TIME USING INTERVAL TIMER & TODC
0000    49 ;                ROGER RIGGS     03-APR-78
0000    50 ;       05       MODIFIED SETIMR TO QUE LONG REQUESTS SO THAT
0000    51 ;                THE CLOCK CAN BE USED FOR QIO WATCH DOG TIMERS
0000    52 ;       06       Fixed DSR$SETIMR_INI to release buffers in timer queue.
0000    53 ;                NICK HOWGATE    06-DEC-78       VERSION 4 (ESSAA-5.01)
0000    54 ;       07       EMULATE 'QUEUE' INSTRUCTIONS
0000    55 ;                COPY REQIDT TO ASTPRM IN SETIMR
0000    56 ;                AND FIX CANTIM TO BE ABLE TO CANCEL SPECIFIC TIMERS
0000    57 ;       08       Fix residual time in WAITMS to return correct value
```

```
0000     58 ;                Roger Riggs     11-Jun-1979
0000     59 ;        09      Revamped timer interrupt service to fix bug caused
0000     60 ;                by lowering IPL from 18 to 7 in calling SCH$QAST
0000     61 ;                when delivering timer requests. Also EXE$SETIMR
0000     62 ;                was affected, since the queue is now sorted by completion
0000     63 ;                time
0000     64 ;                Roger Riggs     20-NOV-1979
0000     65 ;        10      Remove W^ from several references
0000     66 ;                Roger Riggs, 24-Jan-1980, Version 5.2
0000     67 ;        12      Removed Errsup after clock overflow in WAITUS, since
0000     68 ;                it is unnecessary and means that we loaded the clock
0000     69 ;                with a value that will overflow before we can check it.
0000     70 ;                Also added DS$GK_USOVR, used by WAITUS and defined
0000     71 ;                in ONLY7xx for each processor, Expermentially determined
0000     72 ;                to produce an accuracy of about 1%.
0000     73 ;                Also added clear of overflow bit to clock interrupt service
0000     74 ;                Roger Riggs, 27-Feb-1980
0000     75 ;        13      Changed DSBINT to SETIPL(#18) before removing entries from
0000     76 ;                timer queue, Also restore IPL before continuing.
0000     77 ;        14      Assured that Both SETIMR and CANTIM are executed in KERNEL mode
0000     78 ;                Roger Riggs, 22-july-1980, Version 5.5
0000     79 ;        15      Moved EXE$GL_ABSTIM to ENTRY,
0000     80 ;
0000     81 ;                Dave Butenhof, 16-oct-1980, version 6.1
0000     82 ;        16      Move EXE$GQ_SYSTIME to entry, to make it accessible to drivers.
0000     83 ;                Dave Butenhof, 18-feb-1981, version 6.3
0000     84 ;        17      Delete SEP psect.
0000     85 ;                Dave Butenhof, 25-feb-1981, version 6.3
0000     86 ;        18      Fix problem found in queue handling.  REMQUE/INSQUE instructs
0000     87 ;                had been emulated.  Restore the queue instructions.
0000     88 ;        19      Fix WAITUS bug (Tom Kraus generated fix).
0000     89 ;
0000     90 ;        20      - Dave Butenhof, 26-Feb-1982, version 6.6
0000     91 ;                Add special code in WAITUS for Nebula...use interrupt
0000     92 ;                instead of polling.
0000     93 ;
0000     94 ;        21      - Jack Stansbury, 26-Feb-1982, Version 6.6
0000     95 ;                Added .LIBRARY statements for $DS, $DIAG, and $LIB.
0000     96 ;
0000     97 ;        22      Jack Stansbury, 15-September-1982, Version 6.9
0000     98 ;                Changed ICCS$M_ERR from 31 to 15. Also added code in DSI$TimSrv
0000     99 ;                routine that will not reset the interval timer if the SetVec routine
0000    100 ;                is currently trying to stop the interval timer.
0000    101 ;
0000    102 ;        23      Jack Stansbury, 16-September-1982, Version 6.9
0000    103 ;                Changed the ICCS$M_ERR bit back to #15. The VAX Hardware Handbook
0000    104 ;                is wrong in its picture of the ICCS in the back of the book.
0000    105 ;
0000    106 ;        24      Marion Baggett, 24-Sept-1982,   Version 6.9
0000    107 ;                Changed the entry mask in DSX$WAITUS to not save R2, R3. These regis
0000    108 ;                are not changed, and the extra time for CALLx to save them should be
0000    109 ;        25      Bob Bergazzi    21-Oct-1982     Version 6.9
0000    110 ;                Changed DSI$TIMSRV to clear the interrupt when the
0000    111 ;                DS$GB_Stopping_The_Timer flag is set. Otherwise we get stuck
0000    112 ;                in a loop of continuous interrupts.
0000    113 ;
0000    114 ;        26      Bob Bergazzi    25-April-1983   Version 6.11
```

```
0000    115 ;               Added global symbol DSX$WAITUS_USOVR to the instruction in the
0000    116 ;               DSX$WAITUS routine which computes the interval clock count,
0000    117 ;               so that we can reference it from KERNEL and change the value
0000    118 ;               of the clock routine overhead factor (DS$GK_USOVR),
0000    119 ;               if we are running on a SUPERSTAR processor. This is done from
0000    120 ;               KERNEL during the BOOT procedure so that we don't add any more
0000    121 ;               instructions to the DSX$WAITUS routine, which would change the
0000    122 ;               value of the overhead factor for the existing processors.
0000    123 ;               I.e. The code in KERNEL is modifying the instruction at
0000    124 ;               DSX$WAITUS_USOVR.
0000    125 ;
0000    126 ;       27      Bob Bergazzi    May 16,1983     Version 6.11
0000    127 ;               Changed the order of the .LIB statements.
0000    128 ;
0000    129 ;       28      Richard Brown   August 4, 1983  Version 6.13
0000    130 ;               Corrected bug in DSX$CANWAIT.  If this service was called
0000    131 ;               to cancel a $DS_WAITMS, it did not remove the entry from the
0000    132 ;               timer queue, so the AST was still being delivered.  Therefore,
0000    133 ;               the $SETIMR call in DSX$WAITMS was changed so that a request
0000    134 ;               ID is specified (-1).  DSX$CANWAIT was changed so that it
0000    135 ;               issues a $CANTIM to kill all timer requests with an ID of -1.
0000    136 ;
0000    137 ;       29      R.E.Muse        10 January 1984 version 6.14
0000    138 ;               added PRDEF macro definition - Version 4 changes.
0000    139 ;
0000    140 ;       30      Bob Bergazzi    Jan. 26, 1984   Version 6.14
0000    141 ;               Changed CLK$RE_INIT routine to call ONLY_CLOCK_INIT which
0000    142 ;               does cpu-specific stuff to the TODR.
0000    143 ;
0000    144 ;       31      Bob Bergazzi    Aug. 24, 1984   Version 7.1
0000    145 ;               Changed CLK$RE_INIT to not call ONLY_CLOCK_INIT, and also to
0000    146 ;               write the bias value (10000000) into the TODR, if the TODR
0000    147 ;               read less than 10000000. This fixes the bug where the EXE$GQ_SYSTIME
0000    148 ;               was not being re-synchronized if the TODR read less than 10000000.
0000    149 ;
0000    150 ;       32      M. Baggett      23-May-1985     Version 8.2
0000    151 ;               Fixed truncation errors caused by adding module ULTRIX
0000    152 ;
0000    153 ;       33      Domenic Andella 4-Nov-1985      Version 9.1
0000    154 ;               Add code to DSI$TIMSRV to branch around if Ap.
0000    155 ;
0000    156 ;       34      Domenic Andella 23-Dec-1985     Version 9.1
0000    157 ;               Use stack address as argument when getting processor
0000    158 ;               id in routine DSI$TIMSRV, to protect from other processors
0000    159 ;               overwritting location in memory.
0000    160 ;
0000    161 ;       35      Domenic Andella 6-Jan-1986      Version 9.1
0000    162 ;               More mp mods required in routine DSI$TIMSRV to support
0000    163 ;               Scorpio Ap. The Ap should only reset the timer, and exit
0000    164 ;
0000    165 ;       36      Bob Bergazzi    15-May-1986     Version 10.1                    ;G:2
0000    166 ;               Made TODR_BIAS and TICK_NS global for use by KERNEL module.     ;G:2
0000    167 ;--

Psect synopsis output	2	00:00:00.01	00:00:00.04
Cross-reference output	8	00:00:00.36	00:00:00.61
Assembler run totals	2127	00:00:06.42	00:00:11.14

The working set limit was 3400 pages.
239143 bytes (468 pages) of virtual memory were used to buffer the intermediate code.
There were 70 pages of symbol table space allocated to hold 1241 non-local and 46 local symbols.
1166 source lines were read in Pass 1, producing 104 object records in Pass 2.
151 pages of virtual memory were used to define 44 macros.

Assembler run totals	1676	00:00:03.60	00:00:08.97

The working set limit was 2400 pages.
130678 bytes (256 pages) of virtual memory were used to buffer the intermediate code.
There were 40 pages of symbol table space allocated to hold 666 non-local and 9 local symbols.
317 source lines were read in Pass 1, producing 46 object records in Pass 2.
98 pages of virtual memory were used to define 25 macros.

```
0000     58 ;              Allow for RL01/RL02 to be configured: Add CON_UBA_RL
0000     59 ;
0000     60 ;       03     dave butenhof, 02-Sep-1981, version 6.5
0000     61 ;              Support RB730 (Nebula IDC) as load path.
0000     62 ;
0000     63 ;       04     - Jack Stansbury, 22-Oct-1981, Version 6.-
0000     64 ;              Changed SEP Psect to CODE, DATA, and WORK.
0000     65 ;              Also added .LIBRARY statements for $DS,
0000     66 ;              $DIAG and SYS$LIBRARY:LIB.
0000     67 ;
0000     68 ;       05     - Jack Stansbury, 22-Oct-1981, Version 6.-
0000     69 ;              Fixed truncation errors.
0000     70 ;
0000     71 ;       06     - Dave Butenhof, 24-Mar-1982, Version 6.6
0000     72 ;              Fix bug in CONFIG RB730 routine.  IDC can generate double
0000     73 ;              interrupt...make sure to disable device interrupts in handler
0000     74 ;              routine to avoid UNEXPECTED INTERRUPT error.
0000     75 ;       [07] Dave Butenhof, 15-Apr-1982, Version 6.7
0000     76 ;              Support UDA-50 load device.
0000     77 ;       [08] Dave Butenhof, 28-May-1982, version 6.8
0000     78 ;              Fix IDC code - use correct address for IDC, not the
0000     79 ;              one VMB gives us.
0000     80 ;
0000     81 ;       09     M. Baggett      24-Feb-1983     Version 6.11
0000     82 ;              Fixed document typo, support RC25.
0000     83 ;
0000     84 ;       10     M. Baggett      3-March-1983    Version 6.11
0000     85 ;              Added suport for HSC50.
0000     86 ;
0000     87 ;       11     M. Baggett      9-may-1983      Version 6.11
0000     88 ;              Booting from RP07 will have device name of DR and not DB.
0000     89 ;
0000     90 ;       12     M. Baggett      22-May-1983     Version 6.11
0000     91 ;              Allow any length name to be boot device (eg, CIAx, CIAxx, CIAxxx).
0000     92 ;
0000     93 ;       13     M. Baggett      21-Sep-1983     Version 6.13
0000     94 ;              Change HSC50 boot to a disk on the HSC50 to allow selections
0000     95 ;              among the different disks. Changed the name of LESI to RC11, and
0000     96 ;              temporarily changed the RC25 generic to DU.
0000     97 ;
0000     98 ;       14     M. Baggett      7-Sep-1983      Version 6.13
0000     99 ;              Change HSC50 controller naming to match standards.
0000    100 ;              Generic name is  HSC50$DUAnnn for DISK p-table.
0000    101 ;
0000    102 ;       15     Bob Bergazzi    2-14-84         Version 6.14
0000    103 ;              Moved code from KERNEL to here which builds ptables for the
0000    104 ;              console and boot devices. Subroutine is called INI$LOAD_DEVICE.
0000    105 ;              Done so that SET MEM can call this routine.
0000    106 ;
0000    107 ;       16     M. Baggett      15-Feb-1984     Version 6.14
0000    108 ;              Changed the default name for RC25/RCF25 device to DUA temporary ****
0000    109 ;
0000    110 ;       17     M. Baggett      16-May-1984     Version 7.0
0000    111 ;              Fixed HSC50 disk name to show proper unit number.
0000    112 ;
0000    113 ;       18     M. Baggett      6-Jun-1984      Version 7.0
0000    114 ;              Change device name for RC11/RC25/RCF25 back to DA.
```

```
0000   115 ;
0000   116 ;       19      Richard Brown   10-July-1984    Version 7.0
0000   117 ;               Change all references of "RC11" to "LESI".
0000   118 ;
0000   119 ;       20      Jim Shelhamer   1-Oct-1984      Version 7.1
0000   120 ;               Copied HSC50 code ([13] stuff) for multi-digit unit numbers to
0000   121 ;               RA disks section.
0000   122 ;
0000   123 ;       21      Jim Shelhamer   17-Oct-1984     Version 7.1
0000   124 ;               Added support (modelled after D Muse's changes in Attach) to handle
0000   125 ;               long device names for HSC devices.
0000   126 ;
0000   127 ;       22      Domenic Andella 25-Oct-1984     Version 7.1
0000   128 ;               Changed BLSS instruction in routine CON_CI_HSCCI
0000   129 ;               to unsigned BLSSU for comparison of drive # >= 10.
0000   130 ;
0000   131 ;       23      Jim Shelhamer   31-Oct-1984     Version 7.1
0000   132 ;               Changed BLSS instructio in routine CON_UBA_UDA
0000   133 ;               to unsigned BLSSU for comparison of drive # >= 10.
0000   134 ;
0000   135 ;       24      Bob Bergazzi    17-Dec-1984     Version 8.0
0000   136 ;               Fixed CI_NODE ptable to inherit controller letter from
0000   137 ;               CI780 ptable.
0000   138 ;
0000   139 ;       25      Bob Bergazzi    12-June-1985    Version 8.3
0000   140 ;               Add support for auto-config of BDA device ptables.
0000   141 ;
0000   142 ;       26      M. Baggett      12-Aug-1985     Version 8.3
0000   143 ;               Added support for Aurora booting on RDBX1.
0000   144 ;
0000   145 ;       27      Ted Salem       20-Aug-1985     Version 8.3
0000   146 ;               Added code in order to get the HSC port number being used
0000   147 ;
0000   148 ;       28      M. Baggett      3-Sep-1985      VDS     8.3
0000   149 ;               Made symbol AU$K_TYPE global.
0000   150 ;
0000   151 ;       29      Bob Bergazzi    4-Sep-1985      Version 8.3
0000   152 ;               Fix edit 26 (setup R0 with UD_INIT).
0000   153 ;
0000   154 ;       30      M. Baggett      4-Sep-1985      VDS 9.0
0000   155 ;               Set up registers for calling init routines.
0000   156 ;
0000   157 ;       31      Bob Bergazzi    24-Sep-1985     Version 9.0
0000   158 ;               Fixed auto config of UDA50 disk ptable, so that
0000   159 ;               the disk (e.g. DUA0) inherits the controller letter
0000   160 ;               from the DUA ptable. Symptom was reported for KDB50.
0000   161 ;
0000   162 ;       32      Jim Shelhamer   1-OCT-1985      Version 9.0
0000   163 ;               The values returned by the alloc for the CI ptable
0000   164 ;               were being clobbered by the routines to get the
0000   165 ;               pseudo-RPB. See edit 27.

Pass 2	28	00:00:01.33	00:00:02.70
Symbol table output	0	00:00:00.05	00:00:00.13
Psect synopsis output	0	00:00:00.00	00:00:00.00
Cross-reference output	6	00:00:00.54	00:00:00.83
Assembler run totals	2086	00:00:07.77	00:00:14.58

The working set limit was 4012 pages.
255385 bytes (499 pages) of virtual memory were used to buffer the intermediate code.
There were 90 pages of symbol table space allocated to hold 1498 non-local and 95 local symbols.
1528 source lines were read in Pass 1, producing 106 object records in Pass 2.
158 pages of virtual memory were used to define 56 macros.

0000     33 ;**
0000     34 ; FACILITY:     VAX DIAGNOSTIC SUPERVISOR.
0000     35 ;
0000     36 ; ABSTRACT:
0000     37 ;
0000     38 ;       This routine contains the interface with the LSI-11 console.
0000     39 ;       It provides the routines necessary to read and write characters
0000     40 ;       and strings on the operators console.  It contains the limited
0000     41 ;       functionality to interface with QIO.
0000     42 ;
0000     43 ; ENVIRONMENT:
0000     44 ;
0000     45 ;       Operates as part of the Supervisor only in stand-alone.
0000     46 ;       Portions hereof must operate in KERNEL mode.
0000     47 ;
0000     48 ; AUTHOR:
0000     49 ;
0000     50 ;       KEN CHAPMAN     10-NOV-77       VERSION 01.
0000     51 ;
0000     52 ; MODIFICATIONS:
0000     53 ;
0000     54 ;       01      NICK HOWGATE    30-DEC-77       VERSION 02.
0000     55 ;               CMK$TCONSOLE - TURN OFF ALL OUTPUT IF APT REQUESTS
0000     56 ;               NO REPORT (DSA$GL_FLAGS)=DSA$V_NORPT
0000     57 ;
0000     58 ;       02      Roger Riggs     25-JUL-78
0000     59 ;               CMK$TCONSOLE looks also at DS$V_CTRLO in DS$GL_FLAGS
0000     60 ;               MAKE ^O WORK.
0000     61 ;       03      Made unsolicited input is echoed as bells instead of the
0000     62 ;               characters typed.
0000     63 ;
0000     64 ;       04      NICK HOWGATE    5-FEB-79        (ESSAA-5.00)
0000     65 ;               CONVERT TABS TO SPACES
0000     66 ;
0000     67 ;       05      Implement P4 buffer in WRITEBLK
0000     68 ;
0000     69 ;       06      Fix IO$_READPROMPT to always prompt on new line
0000     70 ;
0000     71 ;       07      Defer echo of ^C until KB_CHECK but suppress rest of output
0000     72 ;               until ^C is serviced
0000     73 ;
0000     74 ;       08      MARION BAGGETT  NOV 12,1979
0000     75 ;               ADD THE CONTROL S AND CONTROL Q FUNCTION FOR STARTING AND
0000     76 ;               STOPPING THE PRINTOUT ON THE TERMINAL.
0000     77 ;
0000     78 ;       09      Roger Riggs, 14-Jan-1980, Version 5.2
0000     79 ;               Added checking of IO$M_CANCTRLO  on write to terminal.
0000     80 ;               Used by exception to make sure exceptions always print.
0000     81 ;               Also fixed RINPUT to ignore character if bit 15 (ERR) is
0000     82 ;               Set in the data register.
0000     83 ;
0000     84 ;       10      Dave Butenhof, 17-oct-1980, version 6.1
0000     85 ;               Cause re-type of input line ('^R') after asynchronous output
0000     86 ;               occurs, in the fashion of VMS.  Also, remove hyphen line
0000     87 ;               continuation code, since it doesn't belong here.
0000     88 ;
0000     89 ;       11      To fully support ^C 'disable' in tight time-critical code,
```

```
0000     90 ;                cut down on instruction stream for control characters.
0000     91 ;                Specifically, test for ^C first in RINPUT instead of last.
0000     92 ;                Also, make new routine OUT_CNTRL to output ^C and ^O echo;
0000     93 ;                without all the overhead of doing extra KB_POLL each
0000     94 ;                character (small messages), or checking for tabs, etc.
0000     95 ;
0000     96 ;        12      Dave Butenhof, 17-mar-1981, version 6.3
0000     97 ;                Add VRSETWIDTH routine, and hooks for SET WIDTH command.
0000     98 ;                This allows users (FS in particular) to avoid destroying
0000     99 ;                80 column printer paper with output from DS. Also add
0000    100 ;                VRSHOWWIDTH routine.
0000    101 ;
0000    102 ;        13      - Jack Stansbury, 22-Oct-1981, Version 6.-
0000    103 ;                Changed SEP Psect to CODE, DATA, and WORK.
0000    104 ;                Also added .LIBRARY statements for $DS and $DIAG.
0000    105 ;
0000    106 ;        14      - Jack Stansbury, 26-Oct-1981, Version 6.-
0000    107 ;                Fixed more truncation errors....
0000    108 ;
0000    109 ;        15      - Jack Stansbury, 25-Jan-1982, Version 6.6
0000    110 ;                Changed the WIDTH variable to make it global, so that QA can
0000    111 ;                access it.
0000    112 ;
0000    113 ;        16      - Jack Stansbury, 23-Mar-1982, Version 6.?
0000    114 ;                Added typecoding to the output messages.
0000    115 ;
0000    116 ;        17      - Richard Brown, 8-June-82, Version 6.8
0000    117 ;                Addition of support for specification of
0000    118 ;                terminators other than carriage-return.  We will
0000    119 ;                now be functionally equivalent to VMS QIO calls
0000    120 ;                with respect to the optional terminator specification
0000    121 ;                (argument P4) for the terminal driver.
0000    122 ;
0000    123 ;        18      Bob Bergazzi    6-Aug-82        Version 6.8
0000    124 ;                Added code to change a ^Z into an EXIT command
0000    125 ;
0000    126 ;        19      Jack Stansbury, 26-Oct-1982, Version 6.9
0000    127 ;                Added code to echo the ^C character only if the
0000    128 ;                DS$V_Ctrl_C_No_Echo bit is clear. If it is set,
0000    129 ;                then ^C's will not be echoed.
0000    130 ;
0000    131 ;        20      Bob Bergazzi    5-March-1983    Version 6.11
0000    132 ;                Added code to make SET WIDTH work online.
0000    133 ;
0000    134 ;        21      Bob Bergazzi    8-Apr-1983      Version 6.11
0000    135 ;                Removed incorrectly implemented edit 18.
0000    136 ;
0000    137 ;        22      Domenic Andella 25-Apr-83       Version 6.11
0000    138 ;                Added code in CMK$TCONSOLE routine to activate
0000    139 ;                11/XXX console terminal line.
0000    140 ;
0000    141 ;        23      Richard Brown   22-June-83      Version 6.12
0000    142 ;                Added routine SIZE_TERM, which determines
0000    143 ;                console terminal type.
0000    144 ;
0000    145 ;                Also removed code in READVBLK that treated a
0000    146 ;                question mark as a terminator, since many
```

```
0000    147 ;               terminal IDs contain question marks, and we
0000    148 ;               couldn't figure why it was a terminator anyway.
0000    149 ;
0000    150 ;       24      Bob Bergazzi    Nov. 29,1984    Version 8.0
0000    151 ;               Removed edit 22.
0000    152 ;
0000    153 ;       25      Jim Shelhamer   30 Nov 1984     Version 8.0
0000    154 ;               Added code for 11/ZZZ to handle console I/O over
0000    155 ;               the BI via the RXCD register.
0000    156 ;
0000    157 ;       26      Bob Bergazzi    Dec. 14, 1984   Version 8.0
0000    158 ;               Added support for DELETE character for video terminals.
0000    159 ;               Does a backspace, space, backspace sequence.
0000    160 ;
0000    161 ;       27      M. Baggett      18-Dec-1984     Version 8.0
0000    162 ;               Added terminals ID's for VT101, VT102, VT125 and VT200 family.
0000    163 ;               Undefined types are set to VT100.
0000    164 ;
0000    165 ;       28      Jim Shelhamer   6-Aug-1985      Version 8.3
0000    166 ;               Added check for sys$output being mailbox on
0000    167 ;               SET WIDTH command processing.
0000    168 ;
0000    169 ;       29      M. Baggett      14-Aug-1985     Version 8.3
0000    170 ;               Ignore console data bits for AURORA only.
0000    171 ;
0000    172 ;       30      Ted Salem       1-Oct-1985      Version 9.0
0000    173 ;               Changed RSB to RET in order to do a proper return
0000    174 ;               from an MP entry QIO call.
0000    175 ;
0000    176 ;       31      Jim Shelhamer   7-Oct-1985      Version 9.0
0000    177 ;               Added setting of bit 7 in R0 when data is recv'd
0000    178 ;               from RXCD to indicate data gotten.
0000    179 ;
0000    180 ;       32      M. Baggett      22-Oct-1985     Version 9.0
0000    181 ;               Restore changes so Ctrl z, etc work on AURORA.
0000    182 ;               Renumber some local labels.
0000    183 ;
0000    184 ;       33      Jim Shelhamer   29-Oct-1985     Version 9.1
0000    185 ;               Skip checking if char is console data for AP's.
0000    186 ;
0000    187 ;       34      Jim Shelhamer   30-Jan-1986     Version 9.1
0000    188 ;               Remove scorpio specific code.
0000    189 ;
0000    190 ;       35      Ted Salem       4- May-1986     Version 10.0                    ;G:2
0000    191 ;               Made changes to check SYSTYPE instead of SID                    ;G:2
0000    192 ;               for the Aurora system.                                          ;G:2
0000    193 ;                                                                               ;G:2
0000    194 ;       36      Doug Silver     8- Sep-1986     Version 10.3                    ;G:6
0000    195 ;               In READVBLK, decremented the buffer pointer                     ;G:5
0000    196 ;               by a longword displacement instead of a byte                    ;G:5
0000    197 ;               displacement when using a video terminal.  If                   ;G:6
0000    198 ;               the adress happened to end in 00, decrementing                  ;G:6
0000    199 ;               by 1 with a byte displacement actually                          ;G:6
0000    200 ;               increments by FF.                                               ;G:6

00C5    606          .SBTTL  KB_Poll Routine - Keyboard ready bit check
00C5    607 ;**
00C5    608 ; FUNCTIONAL DESCRIPTION:
00C5    609 ;
00C5    610 ;       THIS ROUTINE CHECKS THE 'READY' BIT IN THE CONSOLE'S STATUS
00C5    611 ;       REGISTER AND, IF CLEAR, RETURNS TO THE CALLING ROUTINE.
00C5    612 ;       If no character is ready this returns immediately.
00C5    613 ;       Select one of the following based on the character typed:
00C5    614 ;       ^C      clear local flags and set the global ^C flag
00C5    615 ;               set ^O flag to suppress output until ^C is serviced by KB_CHECK
00C5    616 ;       ^O      toggle the ^O bit (output may be flushed based on this bit)
00C5    617 ;       ^S      SET CONSFLG FLAG TO SUSPEND TERMINAL OUTPUT
00C5    618 ;       ^Q      CLEAR CONSFLG FLAG TO RESUME TERMINAL OUTPUT IF ANY
00C5    619 ;       ^C      WILL ALSO CLEAR CONSFLG FLAG.
00C5    620 ;       Else,   echo the character as a <BELL>

Psect synopsis output	2	00:00:00.00	00:00:00.00
Cross-reference output	10	00:00:00.49	00:00:00.79
Assembler run totals	1769	00:00:04.80	00:00:10.35

The working set limit was 2900 pages.
134484 bytes (263 pages) of virtual memory were used to buffer the intermediate code.
There were 40 pages of symbol table space allocated to hold 646 non-local and 85 local symbols.
1369 source lines were read in Pass 1, producing 59 object records in Pass 2.
84 pages of virtual memory were used to define 41 macros.

Macro library statistics

;    0032  0      !
;    0033  0      ! Abstract:
;    0034  0      !
;    0035  0      !       This module contains the routines necessary to load the CRD-Loadable image file and integrate
;    0036  0      !       it with the Resident-DS, thus putting the Supervisor under control of CRD. It also now contains
;    0037  0      !       the routines necessary to unload the CRD image.

;    0047  0      ! Version
;    0048  0      !
;    0049  0      !       Version 6.9
;    0050  0      !
;    0051  0      ! Modified By:
;    0052  0      !
;    0053  0      !       01      Jack Stansbury, 29-June-1982, Version 6.8
;    0054  0      !               Took out checking the DS verification bytes, and the check to see if
;    0055  0      !               the DS vector count EQL'ed the CRD vector count (why was this in there
;    0056  0      !               anyway???). Assume that the DS verification bytes are okay. It is CRD
;    0057  0      !               that I am verifying anyway!
```

```
;    0058  0      !
;    0059  0      !       02      Jack Stansbury, 1-July-1982, Version 6.8
;    0060  0      !               You dummy! I put the check of the vector count in there for a good reason!
;    0061  0      !               If the vector counts are not the same, one or the other may get some other
;    0062  0      !               data overwritten (i.e., data following the dispatch vectors). This must
;    0063  0      !               NOT happen. So, if the vector counts are not equal, it is an incompat-
;    0064  0      !               ibility error (not a corrupted error).
;    0065  0      !
;    0066  0      !       03      Jack Stansbury, 15-July-1982, Version 6.9
;    0067  0      !               Added support for loading in the CRD Menu Test file. Which file to load in
;    0068  0      !               depends on which DSA bit is set.
;    0069  0      !
;    0070  0      !       04      Jack Stansbury, 25-July-1982, Version 6.9
;    0071  0      !               Added code to check to see if this was running in User-Mode, and if so, then
;    0072  0      !               use the CRD$ExpReg routine; else use $ExpReg to expand the VDS's memory.
;    0073  0      !               Note that although CRD Menu Test will NOT be normally run in User Mode,
;    0074  0      !               it is run this way when it is being debugged. Whether or not it should run
;    0075  0      !               is determined by the CLI routines.
;    0076  0      !
;    0077  0      !       05      Jack Stansbury, 7-September-1982, Version 6.9
;    0078  0      !               Made major modifications to all the routines in this module. I renamed it from
;    0079  0      !               LoadCRD to CRDImage. Added m ny routines.
;    0080  0      !
;    0081  0      !       06      Jack Stansbury, 26-Oct-1982, Version 6.9
;    0082  0      !               Added code to disable printing ^C's during running of CRD.
;    0083  0      !
;    0084  0      !       07      Jack Stansbury, -2-Mar-1983, Version 6.11
;    0085  0      !               Improved the debugging mode of CRD. Added SET CRD/DEBUG to the CLI.
;    0086  0      !               Made printout of debug vectors much better and much more informative.
;    0087  0      !               Put the actual debug vector printout in this module rather than in a
;    0088  0      !               CRD module. Also took out references to the DS$K_Numb_Dispatch_Vectors.
;    0089  0      !               Also added the DSR$Print_Typecode_Name routine, for use by all the VDS.
;    0090  0      !               Also changed the check to see if the debug flag was set (in CRD_Error).
;    0091  0      !
;    0092  0      !       08      Jack Stansbury, 7-Mar-1983, Version 6.11
;    0093  0      !               Added the DSR$Show_Calls routine - this is a global routine (JSB linkage)
;    0094  0      !               that will print the contents of the last 'n' call frames on the stack.
;    0095  0      !
;    0096  0      !       09      Jack Stansbury, 8-Mar-1983, Version 6.11
;    0097  0      !               Took out the DSR$Show_Calls routine. I created a new module for this routine
;    0098  0      !               called CallFrame.B32. That routine didn't realy belong in here.

;   0777  1
;   0778  1     !++
;   0779  1     ! Functional Description:
;   0780  1     !
;   0781  1     !       'Unload' the CRD image from memory. This routines does not actually unload the CRD code and data per se,
;   0782  1     !       but it does deallocate the memory that the CRD code and data occupies. This routine also deallocates
;   0783  1     !       all temporary CRD storage that was allocated in the DSR$Load_CRD routine.
;   0784  1     !
;   0785  1     ! Formal Parameters:
;   0786  1     !
;   0787  1     !       Return_To_Caller: If the image is loaded, then return to the caller of this routine when the
;   0788  1     !                         unloading is done. If it is not loaded, return regardless.
;   0789  1     !
;   0790  1     ! Side Effects:
```

```
;    0791  1      !
;    0792  1      !       Too numerous to mention. See the code!
;    0793  1      !

;   1052  1     GLOBAL ROUTINE Exchange_Dispatch_Vectors (A_CRD_Dispatch_Vectors) : NOVALUE =                                    ![11
;   1053  1
;   1054  1     !++
;   1055  1     ! Functional Description:
;   1056  1     !
;   1057  1     !       Exchange the CRD and DS dispatch vectors. That is, the DS has a set of dispatch vectors that CRD uses to
;   1058  1     !       access certain DS locations (such as the DSA flags, the Control-C handler address, etc.). These are
;   1059  1     !       stored in the CRDVECS module (part of the Resident-DS image). CRD also has a set of dispatch vectors
;   1060  1     !       that the Resident-DS will use to get to certain CRD locations and routines (such as the CRD routine to
;   1061  1     !       call when something is being printed by the DS). These are stored at the beginning of the CRD-Loadable
;   1062  1     !       image (i.e., in the very first Psect). Exchange_Dispatch_Vectors will exchange these two sets of vectors,
;   1063  1     !       thus enabling the DS to get to the CRD routines, and enabling CRD to get to the DS locations and routines.
;   1064  1     !
;   1065  1     !       Before:
;   1066  1     !               CRD_Dispatch_Vectors:           Contains the addresses of the CRD-Loadable routines and locations
;   1067  1     !               DS$AL_DS_Dispatch_Vectors:      Contains the addresses of certain DS locations and routines
;   1068  1     !       After:
;   1069  1     !               CRD_Dispatch_Vectors:           Contains the addresses of certain DS locations and routines
;   1070  1     !               DS$AL_DS_Dispatch_Vectors:      Contains the addre  es of the CRD-Loadable routines and locations
;   1071  1     !
;   1072  1     !       Note also that the first longword in each set of vectors will contain a Count byte (the number of
;   1073  1     !       dispatch vectors), a null byte, and two bytes containing the version number of CRD. One of the version
;   1074  1     !       numbers will be positive, and the other one will be negative. The algorithm for verification is as follows:
;   1075  1     !
;   1076  1     !               1. Read in the CRD-Loadable file
;   1077  1     !               2. Set CRD_Dispatch_Vectors = starting address of the now resident CRD image
;   1078  1     !               3. DS$AL_DS_Dispatch_Vectors [0] <24, 8, 0> = 0                                 ! The null byte
;   1079  1     !               4. DS$AL_DS_Dispatch_Vectors [0] <16, 8, 0> =                                   ! The version #'s
;   1080  1     !                  - DS$AL_DS_Dispatch_Vectors [0] <8, 8, 0>
;   1081  1     !               5. CRD_Dispatch_Vectors [0] <24, 8, 0> = 0                                      ! The null byte
;   1082  1     !               6. CRD_Dispatch_Vectors [0] <16, 8, 0> = - CRD_Dispatch_Vectors [0] <8, 8, 0>   ! The version #'s
```

```
;    1083  1      !
;    1084  1      !       If any of the above statements are not true, an appropriate error message is printed and CRD-AUTOTEST
;    1085  1      !       is aborted. This ensures that not only do the version numbers agree, but also that the image read in is
;    1086  1      !       indeed the CRD-Loadable image file.
;    1087  1      !
;    1088  1      !       Note: The CRD-Loadable image will be linked with a /System=%X0000 qualifer, thus making all addresses relati
;    1089  1      !       to zero. The only address that this affects are those in the CRD_Dispatch_Vectors, the ones that are moved t
;    1090  1      !       the Resident-DS area. These CRD routine addresses must be modified by the amount of the starting location of
;    1091  1      !       the CRD image (i.e., the parameter to this routine).

0000    32 ;
0000    33 ; ABSTRACT:
0000    34 ;       This module contains the bootstrap device driver for the
0000    35 ;       console TU58.
0000    36 ;
0000    37 ; ENVIRONMENT:  IPL 31, kernel mode, code must be PIC
0000    38 ;
0000    39 ; AUTHOR:  Steve Beckhardt,     Creation Date:  1-Nov-1979
0000    40 ;
0000    41 ; MODIFIED BY:
0000    42 ;
0000    43 ;       12      Amy Iorio       June 6, 1985    Version 8.3
0000    44 ;               Branched around halt in do_mapping.
0000    45 ;
0000    46 ;       11      Bob Bergazzi    May 16, 1983    Version 6.11
0000    47 ;               Changed the order of the .LIB statements.
0000    48 ;
0000    49 ;       10      Marion Baggett, 15-Jul-1982, Version 6.9
0000    50 ;               Increased the timeout value so loading of QALOAD for QA-ing
0000    51 ;               can be done on ZAPPA comet.
0000    52 ;
0000    53 ;       09      - Dave Butenhof, 23-Mar-1982, version 6.7
0000    54 ;               Now that TU58 hardware is fixed (Nebula), remove some
0000    55 ;               hack code
0000    56 ;
0000    57 ;       08      - Dave Butenhof, 10-Feb-1982, version 6.6
```

```
0000     58 ;                  Fix driver to work correctly on Nebula.  This is mainly
0000     59 ;                  a matter of allowing some leeway in READY/DONE bit polling
0000     60 ;                  loops to allow console to do something.  Also allow ^C
0000     61 ;                  termination of long TU-58 reads.
0000     62 ;
0000     63 ;          V02-007 KTA0037         Kerbey T. Altmann       26-Oct-1981
0000     64 ;                  Fix start and size to encompass the entire driver.
0000     65 ;
0000     66 ;          02-006  STJ0125         Steven T. Jeffreys      30-Jul-1981
0000     67 ;                  Added support of MRSP protocol.  For an explantion of the
0000     68 ;                  TU58's operation, including RSP and MRSP protocol, please
0000     69 ;                  see the "TU58 Engineering Specification", document number
0000     70 ;                  TU58-0-0.
0000     71 ;
0000     72 ;          02-005  TCM0002         Trudy C. Matthews       29-Jul-1981
0000     73 ;                  Changed all "7ZZ's to "730's.
0000     74 ;
0000     75 ;          02-004  TCM0001         Trudy C. Matthews       12-Jun-1981
0000     76 ;                  Altered XMIT_TWO_CHARS routine to work on 11/730 processor,
0000     77 ;                  which requires that the high 3 bytes of the value moved to
0000     78 ;                  PR$_CSTD be zero.  Corrected bug in DO_MAPPING routine.
0000     79 ;                  Added CONSDD_START label to mark start of driver.
0000     80 ;
0000     81 ;          02-003  SRB0001         Steve Beckhardt         10-Jul-1980
0000     82 ;                  Fixed bugs in change CAS0001
0000     83 ;
0000     84 ;          02-02   CAS0001         C.A. Samuelson          30-Apr-1980
0000     85 ;                  Change interface to BOOTDRIVR for UBA pruge of buffered
0000     86 ;                  datapath
0000     87 ;

Assembler run totals	1774	00:00:04.16	00:00:07.61

```
The working set limit was 2900 pages.
132768 bytes (260 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1150 non-local and 26 local symbols.
673 source lines were read in Pass 1, producing 76 object records in Pass 2.
55 pages of virtual memory were used to define 21 macros.
```

Pass 2	9	00:00:00.47	00:00:00.99
Symbol table output	0	00:00:00.02	00:00:00.02
Psect synopsis output	0	00:00:00.00	00:00:00.00
Cross-reference output	3	00:00:00.20	00:00:00.37
Assembler run totals	1343	00:00:02.46	00:00:05.55

The working set limit was 2900 pages.
61946 bytes (121 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 476 non-local and 36 local symbols.
767 source lines were read in Pass 1, producing 40 object records in Pass 2.
20 pages of virtual memory were used to define 15 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	2
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	3
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	0
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	0
SYS$COMMON:[SYSLIB]LIB.MLB;2	2
SYS$COMMON:[SYSLIB]STARLET.MLB;2	7
TOTALS (all libraries)	14

584 GETS were required to define 14 macros.

There were no errors, warnings or information messages.

Pass 1	452	00:00:00.92	00:00:01.57
Symbol table sort	0	00:00:00.13	00:00:00.14
Pass 2	49	00:00:00.29	00:00:00.52
Symbol table output	2	00:00:00.01	00:00:00.01
Psect synopsis output	2	00:00:00.00	00:00:00.00
Cross-reference output	6	00:00:00.06	00:00:00.10
Assembler run totals	1427	00:00:01.67	00:00:03.37

The working set limit was 1900 pages.
43684 bytes (86 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 431 non-local and 9 local symbols.
328 source lines were read in Pass 1, producing 36 object records in Pass 2.
9 pages of virtual memory were used to define 7 macros.

Assembler run totals	1787	00:00:03.97	00:00:07.00

The working set limit was 2400 pages.
148416 bytes (290 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1158 non-local and 10 local symbols.
174 source lines were read in Pass 1, producing 76 object records in Pass 2.
63 pages of virtual memory were used to define 22 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	6

                                0000     67 ;               Dave Butenhof, 30-sep-1980, Version 6.1
                                0000     68 ;       10      Make PSL typeout unaffected by /WORD or /BYTE.
                                0000     69 ;               Also change /ASCII to use !AF FAO directive, and also type
                                0000     70 ;               the longword in hex to aid in decoding non-printing strings.
                                0000     71 ;               Dave Butenhof, 23-feb-1981, version 6.3
                                0000     72 ;       11      fix truncation errors
                                0000     73 ;
                                0000     74 ;       12      - Jack Stansbury, 22-Oct-1981, Version 6.-
                                0000     75 ;               Fixed truncation errors. Also added .LIBRARY statements
                                0000     76 ;               for $DS and $DIAG.
                                0000     77 ;
                                0000     78 ;       13      - Jack Stansbury, 10-Nov-1981, Version 6.-
                                0000     79 ;               Added routines for VRSHOWBASE (to show the base address)
                                0000     80 ;               and VRSHOWDFLT (to show the default size and radix). Also
                                0000     81 ;               changed the error messages to mixed case.
                                0000     82 ;
                                0000     83 ;       14      - Richard Brown, 19-May-82, Version 6.8
                                0000     84 ;               Addition of routine to process the DEBUG user command.
                                0000     85 ;
                                0000     86 ;       15      - Domenic Andella, 17-Jul-84, Version 7.0
                                0000     87 ;               The 'DEP' command does a write followed by
                                0000     88 ;               read to display the data written. This causes
                                0000     89 ;               a mchk on VENUS when depositing a one into
                                0000     90 ;               the Unibus Adapter Control Register (UACR),
                                0000     91 ;               and could cause similar problems in other
                                0000     92 ;               new CPU's. Problem solved by removing the
                                0000     93 ;               final examine from the 'DEPOSIT' command.
                                0000     94 ;               This makes VDS consistent with the DEPOSIT
                                0000     95 ;               command in XDELTA and DEBUG.
                                0000     96 ;
                                0000     97 ;       16      Domenic Andella, 4-Apr-1985     Version 8.2
                                0000     98 ;               Add mod to COND_DEBUG to call MP$_STOP_EVERYTHING
                                0000     99 ;               if mp system.
                                0000    100 ;
                                0000    101 ;

0000    138 ;                   of an Ap's ipr data. Re-instate instruction     ;G:2
0000    139 ;                   to load IPR data in routine VRDEPOSIT. This     ;G:2
0000    140 ;                   instruction disappeared from V8.3.              ;G:6
0000    141 ;                                                                   ;G:2
0000    142 ;       26          Ted Salem       8-Jul_1986      Version 10.1    ;G:3
0000    143 ;                   Made dbg_addr_rtn a global symbol               ;G:3
0000    144 ;                                                                   ;G:3
0000    145 ;       27          David Gearin    29-Jan-1987     VERSION 10.5    ;G:5
0000    146 ;                   Modified DBG_TBIT subroutine so the call to     ;G:6
0000    147 ;                   RBREAK_IN is performed after the call to FETCH_ ;G:4
0000    148 ;                   STORE.  This permits the actual opcode to be shown ;G:4
0000    149 ;                   while stepping through a program instead of '03' ;G:6
0000    150 ;                   (the opcode for Breakpoint). Also added another call ;G:4
0000    151 ;                   to RBREAK_IN in case the BBCC command does branch. ;G:4
0000    152 ;                   This way the breakpoints will be reinserted.    ;G:4
0000    153 ;                                                                   ;G:4
0000    154 ;       28          David Gearin    12-Feb-1987     Version 10.8    ;G:5
0000    155 ;                   Added sub-routines SAVE_SCB_VECTORS and RESTORE_SCB_VECTORS ;G:5
0000    156 ;                   to override a diagnostic program's exception handler during ;G:5
0000    157 ;                   an examine or deposit command.                  ;G:5
0000    158 ;                                                                   ;G:5
0000    159 ;                   Steven Fortuna  11-May-1987     Version 10.8    ;G:6
0000    160 ;                   Add output lines to print the Base and Offset when a show ;G:6
0000    161 ;                   break is entered or a break point is hit.  Also add the ;G:6
0000    162 ;                   capability to modify the break points Base addres and offset ;G:6
0000    163 ;                   by entering the SET BREAK/BASE=.... command.  No symptom ;G:6
0000    164 ;                   ovserved.                                       ;G:6
0000    165 ;                                                                   ;G:7
0000    166 ;                   Steven Fortuna  12-May-1987     Version 10.8    ;G:8
0000    167 ;                   Add Parameters to pass the base address and offset of ;G:8
0000    168 ;                   breakpoints to MPCOMMON so Ap breakpoint message would ;G:7
0000    169 ;                   be consent with Primary breakpoint message.     ;G:7
0000    170 ;                   No symptom ovserved.                            ;G:7
0000    171 ;                                                                   ;G:8
```

```
                        0000   172 ;               David Gearin    Sept-15-1987    Version 10.10                ;G:8
                        0000   173 ;               Added an external variable, ds$gl_ipr_value                  ;G:8
                        0000   174 ;               This variable will be used to store ipr values to            ;G:8

Performance indicators

Phase	Page faults	CPU Time	Elapsed Time
Initialization	45	00:00:00.05	00:00:00.20
Command processing	956	00:00:00.20	00:00:00.75
Pass 1	1002	00:00:03.96	00:00:06.05
Symbol table sort	0	00:00:00.21	00:00:00.20
Pass 2	252	00:00:01.38	00:00:02.75
Symbol table output	2	00:00:00.07	00:00:00.15
Psect synopsis output	2	00:00:00.01	00:00:00.01
Cross-reference output	12	00:00:00.70	00:00:01.10
Assembler run totals	2273	00:00:06.58	00:00:11.21

The working set limit was 2900 pages.
185374 bytes (363 pages) of virtual memory were used to buffer the intermediate code.
There were 40 pages of symbol table space allocated to hold 634 non-local and 147 local symbols.
2353 source lines were read in Pass 1, producing 75 object records in Pass 2.
84 pages of virtual memory were used to define 35 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	8
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	9
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	0
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	0
SYS$COMMON:[SYSLIB]LIB.MLB;2	0
SYS$COMMON:[SYSLIB]STARLET.MLB;2	18
TOTALS (all libraries)	35

741 GETS were required to define 35 macros.

There were no errors, warnings or information messages.

Assembler run totals	1871	00:00:04.21	00:00:07.08

The working set limit was 2400 pages.
159281 bytes (312 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1055 non-local and 20 local symbols.
404 source lines were read in Pass 1, producing 73 object records in Pass 2.
71 pages of virtual memory were used to define 27 macros.

Psect synopsis output	0	00:00:00.01	00:00:00.01
Cross-reference output	3	00:00:00.08	00:00:00.11
Assembler run totals	1252	00:00:01.54	00:00:03.43

The working set limit was 2900 pages.
53950 bytes (106 pages) of virtual memory were used to buffer the intermediate code.
There were 10 pages of symbol table space allocated to hold 175 non-local and 7 local symbols.
185 source lines were read in Pass 1, producing 30 object records in Pass 2.
43 pages of virtual memory were used to define 15 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	4
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	1
SYS$COMMON:[SYSLIB]LIB.MLB;2	0
SYS$COMMON:[SYSLIB]STARLET.MLB;2	5
TOTALS (all libraries)	10

249 GETS were required to define 10 macros.

There were no errors, warnings or information messages.

;    0057  0      !               Dave Butenhof, 18-mar-1981, version 6.3
```

```
;    0058  0      !        01      Allow ODS subdirectory support under user mode.
;    0059  0      !               -Dave butenhof, 02-Jun-1981, version 6.3
;    0060  0      !        02      Change library specs for more flexibility
;    0061  0      !                - Dave butenhof, 26-Jun-1981, version 6.4
;    0062  0      !        03      Fix to use BOO$QIO instead of DSP$XX_READ (the latter does
;    0063  0      !                not do error retries, nor does it handle errors well).
;    0064  0      !        04      - Dave Butenhof, 31-aug-1981, version 6.5
;    0065  0      !                Support DQ device type (IDC disks) for Nebula.  Disks are
;    0066  0      !                R80 and RI02.
;    0067  0      !        05      - dave butenhof, 16-Sep-1981, version 6.5
;    0068  0      !                Fix directory so unattached device results in 'nice' error
;    0069  0      !                message, not general RMS$_DEV.
;    0070  0      !
;    0071  0      !        06      - Jack Stansbury, 22-Oct-1981, Version 6.-
;    0072  0      !                Fixed a truncation error by changing the PSECT declarations to
;    0073  0      !                conform to the .MAR file's PSECT's.
;    0074  0      !
;    0075  0      !        07      - Dave Butenhof, 26-Oct-1981, Version 6.-
;    0076  0      !                Alter call to LOC$PTABLE to include adapter address
;    0077  0      !                argument.
;    0078  0      !
;    0079  0      !        08      - Dave Butenhof, 12-Jan-1982, Version 6.6
;    0080  0      !                Set up Control C trap in DIRECTORY routines; this will allow
;    0081  0      !                closing of any open files.
;    0082  0      !
;    0083  0      !        09      - Dave Butenhof, 25-Jan-1982, Version 6.6
;    0084  0      !                Use DSR$ALLOCATE_PSEUDO_RPB routine instead of explicit init.
;    0085  0      !
;    0086  0      !        10      - Dave Butenhof, 03-Feb-1982, Version 6.6
;    0087  0      !                Add ability to check filespec against (wildcarded) argument
;    0088  0      !                before typing.  This is almost free, since the checking
;    0089  0      !                routine exists in HELP already for checking keywords.  All
;    0090  0      !                we need here is minimal pre-parsing to add 'implicit
;    0091  0      !                wildcards', and the code to call the compare routine.
;    0092  0      !
;    0093  0      !        11      Dave Butenhof, 15-Apr-1982
;    0094  0      !                Add UDA50 disk support.
;    0095  0      !
;    0096  0      !        12      Dave Butenhof, 24-May-1982
;    0097  0      !                Add TM78 support (by removing special case code which disallows
;    0098  0      !                 TU78)
;    0099  0      !
;    0100  0      !        13      M. Baggett,     9-March-1983, Version 6.11
;    0101  0      !                Added support for CI-HSC50 and RC25/RCF25.
;    0102  0      !
;    0103  0      !        14      Bob Bergazzi    May 17, 1983    Version 6.11
;    0104  0      !                Changed the order of searching the libraries.
;    0105  0      !        15      M. Baggett      11-Oct-1983     Version 6.13
;    0106  0      !                Added support for CI-HSC50 magtape.
;    0107  0      !
;    0108  0      !        16      Bob Bergazzi    April 13, 1984  Version 7.0
;    0109  0      !                Added support for ZZZ console storage device in ODS format.
;    0110  0      !                to DSX$DIRECTORY routine.
;    0111  0      !
;    0112  0      !        17      Bob Bergazzi    May 21, 1984    Version 7.0
;    0113  0      !                Added support for DIR/WIDE, which displays the directory
;    0114  0      !                1 filename per line. This avoids the truncation of
```

```
;    0115  0      !                 long filenames under VMS V4.
;    0116  0      !
;    0117  0      !        18       RE MUSE          22 MAY,1984     Version 7.0
;    0118  0      !                 increased buffer size to handle long filenames for VMS v4
