The working set limit was 4096 pages.
2258249 bytes (4411 pages) of virtual memory were used to buffer the intermediate code.
There were 40 pages of symbol table space allocated to hold 697 non-local and 0 local symbols.
399 source lines were read in Pass 1, producing 93 object records in Pass 2.
1981 pages of virtual memory were used to define 462 macros.

0000    128 ;
0000    129 ;                   Dave Butenhof, 15-dec-1980, V6.2
0000    130 ;       13          Add ML11 PTDESC.
0000    131 ;
0000    132 ;                   Dave Butenhof, 19-mar-1981, version 6.3
0000    133 ;       14          Add DV11 PTdesc.
0000    134 ;       15          Add KA730 Ptdesc.
0000    135 ;
0000    136 ;       16          Dave butenhof, 4-sep-1981, version 6.5
0000    137 ;                   add RB730 and R80 Ptable descriptors
0000    138 ;
0000    139 ;       17          Dave Butenhof, 26-Oct-1981, version 6.-
0000    140 ;                   Add some missing devices
0000    141 ;
0000    142 ;       18          Dave Butenhof, 10-Nov-1981, version 6.-
0000    143 ;                   Add the UDA50 and RA80 devices
0000    144 ;
0000    145 ;       19          Dave Butenhof, 15-Dec-1981, Version 6.6
0000    146 ;                   Add PX780
0000    147 ;
0000    148 ;       20          Dave Butenhof, 23-Feb-1982, version 6.6
0000    149 ;                   Add CI_NODE and CI750 Ptable descriptors
0000    150 ;
0000    151 ;       21          Dave Butenhof, 16-Apr-1982, verison 6.7
0000    152 ;                   Add RA81 Ptable descriptor
0000    153 ;
0000    154 ;       22          Dave Butenhof, 29-Apr-1982, version 6.7
0000    155 ;                   Add RA60 Ptable descriptor
0000    156 ;
0000    157 ;       23          Dave Butenhof, 05-May-1982, version 6.8
0000    158 ;                   Activate the device name check feature which
0000    159 ;                   was added (latent) in 6.7 macros.
0000    160 ;
0000    161 ;       24          Dave Butenhof, 11-May-1982, version 6.8
0000    162 ;                   Add Lp07 and Lp26 Ptables for Dan Milleville
0000    163 ;
0000    164 ;       25          Dave Butenhof, 25-May-1982, version 6.8
0000    165 ;                   Add "console" Ptable desc. to IOBASE.  This allows
0000    166 ;                   new console Ptable to be displayed by SHOW
0000    167 ;                   (DEVICE | SELECT) without the annoying "..." which
0000    168 ;                   means it couldn't find the Ptable.  This device is
0000    169 ;                   attached at DS startup by KERNEL, and as it has
0000    170 ;                   a lower-case device type, CANNOT be attached manually!
0000    171 ;
```

```
                0000   172 ;       26      M. Baggett, 20-Jul-1982 Ver 6.9
                0000   173 ;               Added LP27 line printer.
                0000   174 ;
                0000   175 ;       27      Bob Bergazzi    1-Oct-82        Version 6.9
                0000   176 ;               Added UNA11 (UNIBUS to NI Adapter)
                0000   177 ;
                0000   178 ;       28      M. Baggett      1-Dec-1982      Version 6.10
                0000   179 ;               Added TU80 magtape and DZ32.
                0000   180 ;
                0000   181 ;       29      M. Baggett      8-Dec-1982      Version 6.10
                0000   182 ;               Added TU81 magtape.
                0000   183 ;
                0000   184 ;       30      M. Baggett      10-Dec-1982     Version 6.10
                0000   185 ;               Added VS100.
                0000   186 ;
                0000   187 ;       31      Bob Bergazzi    10-Jan-83       Version 6.11
                0000   188 ;               Changed the comment before DS$GA_PTABLE.

                0000   190 ;       32      M. Baggett      14-Jan-83       Version 6.11
                0000   191 ;               Added RC25.
                0000   192 ;
                0000   193 ;       33      M. Baggett      15-Feb-83       Version 6.11
                0000   194 ;               Added VS300 and RCF25.
                0000   195 ;
                0000   196 ;       34      M. Baggett      14-Mar-1983     Version 6.11
                0000   197 ;               Added p-table for LESI controller.
                0000   198 ;
                0000   199 ;       35      M. Baggett      21-March-1983   Version 6.11
                0000   200 ;               Added p-tables for LA12,LA100,LN01,VT220,VT240.
                0000   201 ;
                0000   202 ;       36      Bob Bergazzi    25-April-1983   Version 6.11
                0000   203 ;               Added Ptable for KA785.
                0000   204 ;
                0000   205 ;       37      Richard Brown   2-May-1983      Version 6.11
                0000   206 ;               Added SBIA and KAxxx.
                0000   207 ;
                0000   208 ;       38      Richard Brown   15-July-1983    Version 6-12
                0000   209 ;               Added RC11.
                0000   210 ;
                0000   211 ;       39      M. Baggett      8-Aug-1983      Version 6.12
                0000   212 ;               Added IEU11A
                0000   213 ;
                0000   214 ;       40      M. Baggett      7-Sep-1983      Version 6.13
                0000   215 ;               Added VS125.
                0000   216 ;
                0000   217 ;       41      M. Baggett      21-Sep-1983     Version 6.13
                0000   218 ;               Added DISK p-table.
                0000   219 ;
                0000   220 ;       42      M. Baggett      11-Oct-1983     Version 6.13
                0000   221 ;               Added TAPE p-table.
                0000   222 ;
                0000   223 ;       43      M. Baggett      13-Oct-1983     Version 6.13
                0000   224 ;               Added TS05 p-table.
                0000   225 ;
                0000   226 ;       44      Bob Bergazzi    Jan 23, 1984    Version 6.14
                0000   227 ;               Added KAZZZ Ptable.
                0000   228 ;
```

```
0000   229 ;        45      M. Baggett      Feb 6, 1984     Version 6.14
0000   230 ;                Added DMZ32 p-table.
0000   231 ;
0000   232 ;        46      Richard Brown   July 7, 1984    Version 7.0
0000   233 ;                Removed RC11, since it is really LESI.
0000   234 ;
0000   235 ;        47      Bob Bergazzi    Aug. 6, 1984    Version 7.1
0000   236 ;                Added DW000 ptable for BUA.
0000   237 ;
0000   238 ;        48      Bob Bergazzi    Sep. 4, 1984    Version 7.1
0000   239 ;                Changed BUA device name from DW000 to DWBUA.
0000   240 ;
0000   241 ;        49      Amy Iorio       Oct. 1, 1984    Version 7.1
0000   242 ;                Change KAXXX to KA86.
0000   243 ;
0000   244 ;        50      Amy Iorio       Oct. 11, 1984   Version 7.1
0000   245 ;                Added KAXXX.
0000   246 ;
0000   247 ;        51      M. Baggett      2-NOV-1984      Version 7.1
0000   248 ;                Added TK50.
0000   249 ;
0000   250 ;        52      Bob Bergazzi    Nov. 12, 1984   Version 7.1
0000   251 ;                Added BCI750.
0000   252 ;
0000   253 ;        53      M. Baggett      15-Nov-1984     Version 7.1
0000   254 ;                Added RX31,RX32,RX50,RX180,RUX50.
0000   255 ;
0000   256 ;        54      Bob Bergazzi    Nov. 29,1984    Version 8.0
0000   257 ;                Added KA810. Removed KAXXX.
0000   258 ;
0000   259 ;        55      M. Bagggett     18-Dec-1984     Version 8.0
0000   260 ;                Added VT101, VT102, VT125.
0000   261 ;
0000   262 ;        56      A. Iorio        18-Jan-1985     Version 8.1
0000   263 ;                Added DHU11, DR11C
0000   264 ;
0000   265 ;        57      A. Iorio        5-Mar-1985      Version 8.1
0000   266 ;                Added DX20, TU70, TU72
0000   267 ;
0000   268 ;        58      A. Iorio        12-Mar-1985     Version 8.1
0000   269 ;                Added DHV11
0000   270 ;
0000   271 ;        59      Bob Bergazzi    24-Apr-1985     Version 8.1
0000   272 ;                Added KA820, remove KA810 later.
0000   273 ;
0000   274 ;        60      Bob Bergazzi    16-May-1985     Version 8.2
0000   275 ;                Added BLA ptable.
0000   276 ;
0000   277 ;        61      Bob Bergazzi    23-May-1985     Version 8.2
0000   278 ;                Added KDB50 ptable (BDA).
0000   279 ;
0000   280 ;        62      Bob Bergazzi    30-May-1985     Version 8.3
0000   281 ;                Added SLU, NI ptables.
0000   282 ;
0000   283 ;        63      Bob Bergazzi    11-June-1985    Version 8.3
0000   284 ;                Changed BCI750 to CIBCI.
0000   285 ;
```

```
0000   286 ;        64      Bob Bergazzi    18-June-1985    Version 8.3
0000   287 ;                Removed KAZZZ ptable.
0000   288 ;
0000   289 ;        65      M. Bag          7-Aug-1985      Version 8.3
0000   290 ;                Added   .X1 p-table.
0000   291 ;
0000   292 ;        66      Amy Iorio       12-Aug-1985     Version 8.3
0000   293 ;                Added LN03, LA210, VT61, VT71, VT131, and VT132 ptables.
0000   294 ;
0000   295 ;        67      M. Baggett      19-Aug-1985     Version 9.1
0000   296 ;                Added RD52,RD53.
0000   297 ;
0000   298 ;        68      M. Baggett      11-Sep-1985     VDS Ver 9.0
0000   299 ;                Added p-tables for DEBNT(AIE),KA800,KFBTA(AIO),LANCE
0000   300 ;
0000   301 ;        69      Bob Bergazzi    20-Sep-1985     Version 9.0
0000   302 ;                Removed KA810 ptable since KA820 supersedes it.
0000   303 ;
0000   304 ;        70      Jim Baranski    09-Oct-1985     Version 9.0
0000   305 ;                Added RA82 disk Ptable descriptor.
0000   306 ;
0000   307 ;        71      Jim Baranski    10-Oct-1985     Version 9.0
0000   308 ;                Added LUA11 Ptable descriptor.
0000   309 ;
0000   310 ;        72      M. Baggett      22-Oct-1985     Version 9.0
0000   311 ;                Removed RDBX1 p-table.
0000   312 ;                                                                        ;G:4
0000   313 ;        73      J. Baranski     11-Mar-1986     Version 10.0            ;G:4
0000   314 ;                Added RRD50 PTable descriptor.                          ;G:4
0000   315 ;                                                                        ;G:12
0000   316 ;        74      M. Baggett      5-May-1986      Version 10.0            ;G:12
0000   317 ;                Added RD54.                                             ;G:12
0000   318 ;                                                                        ;G:13
0000   319 ;        75      Richard E. Muse   19-may-1986   version 10.1            ;G:13
0000   320 ;                added CIBCA                                             ;G:13
0000   321 ;                                                                        ;G:14
0000   322 ;        76      M. Baggett      10-Jun-1986     Version 10.1            ;G:17
0000   323 ;                Added DRB32.                                            ;G:14
0000   324 ;                                                                        ;G:17
0000   325 ;        77      Bob Bergazzi    2-Sep-1986      Version 10.3            ;G:17
0000   326 ;                Arranged the table of ptable descriptors so that there is one ;G:17
0000   327 ;                device listed per line of code.  Added the symbol       ;G:17
0000   328 ;                PTABLE_DESCRIPTORS to identify the beginning of this list.  ;G:17
0000   329 ;                This was done so that the release group can more easily parse ;G:17
0000   330 ;                the source to obtain a list of supported devices.       ;G:17
0000   331 ;                                                                        ;G:17
0000   332 ;                ************************************************    ;G:17
0000   333 ;                                IMPORTANT!!                             ;G:17
0000   334 ;                ************************************************    ;G:17
0000   335 ;                Please follow this convention when adding new devices   ;G:17
0000   336 ;                ************************************************    ;G:17
0000   337 ;                                                                        ;G:17
0000   338 ;                Also removed $DS_RRD50_DEF call because it was moved into the ;G:17
0000   339 ;                $DS_RRD50 ptable descriptor in DIAG.MAR.                ;G:17
0000   340 ;                                                                        ;G:19
0000   341 ;        78      Stephen Meier   30-Oct-1986     Version 10.4            ;G:40
0000   342 ;                Added XBI .                                             ;G:19
```

```
0000   343 ;                                                                    ;G:27
0000   344 ;        79      David Gearin    30-Jan-1987     Version 10.5        ;G:28
0000   345 ;                Added p-table for LG01, LG02, LG03.                 ;G:27
0000   346 ;                                                                    ;G:27

Performance indicators

Phase	Page faults	CPU Time	Elapsed Time
Initialization	22	00:00:00.03	00:00:00.20
Command processing	877	00:00:00.23	00:00:01.10
Pass 1	9349	00:00:57.37	00:01:05.13
Symbol table sort	2	00:00:00.18	00:00:00.18
Pass 2	6019	00:00:07.77	00:00:14.72
Symbol table output	3	00:00:00.12	00:00:00.53
Psect synopsis output	3	00:00:00.00	00:00:00.00
Cross-reference output	899	00:00:03.49	00:00:05.66
Assembler run totals	17175	00:01:09.19	00:01:27.52

The working set limit was 4096 pages.
2609663 bytes (5097 pages) of virtual memory were used to buffer the intermediate code.
There were 40 pages of symbol table space allocated to hold 766 non-local and 0 local symbols.
836 source lines were read in Pass 1, producing 110 object records in Pass 2.
2267 pages of virtual memory were used to define 515 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	347
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	0
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	0
SYS$COMMON:[SYSLIB]LIB.MLB;2	0
SYS$COMMON:[SYSLIB]STARLET.MLB;2	5
TOTALS (all libraries)	352

```
3661 GETS were required to define 352 macros.

There were no errors, warnings or information messages.

Assembler run totals	1930	00:00:05.47	00:00:09.02

```
The working set limit was 2900 pages.
186284 bytes (364 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1018 non-local and 44 local symbols.
681 source lines were read in Pass 1, producing 69 object records in Pass 2.
124 pages of virtual memory were used to define 39 macros.
```

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	10
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	3
SYS$COMMON:[SYSLIB]LIB.MLB;2	14
SYS$COMMON:[SYSLIB]STARLET.MLB;2	8
TOTALS (all libraries)	35

```
1512 GETS were required to define 35 macros.

There were no errors, warnings or information messages.

Performance indicators

Phase	Page faults	CPU Time	Elapsed Time
Initialization	25	00:00:00.03	00:00:00.18
Command processing	878	00:00:00.22	00:00:00.68
Pass 1	631	00:00:02.70	00:00:04.13
Symbol table sort	0	00:00:00.20	00:00:00.19
Pass 2	9	00:00:00.75	00:00:01.45
Symbol table output	0	00:00:00.05	00:00:00.21
Psect synopsis output	0	00:00:00.00	00:00:00.00
Cross-reference output	13	00:00:00.20	00:00:00.36
Assembler run totals	1556	00:00:04.15	00:00:07.20

The working set limit was 3400 pages.
140774 bytes (275 pages) of virtual memory were used to buffer the intermediate code.
There were 40 pages of symbol table space allocated to hold 747 non-local and 35 local symbols.
748 source lines were read in Pass 1, producing 53 object records in Pass 2.
104 pages of virtual memory were used to define 31 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	10
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	1
SYS$COMMON:[SYSLIB]LIB.MLB;2	10
SYS$COMMON:[SYSLIB]STARLET.MLB;2	6
TOTALS (all libraries)	27

1149 GETS were required to define 27 macros.

There were no errors, warnings or information messages.

Psect synopsis output	2	00:00:00.01	00:00:00.01
Cross-reference output	5	00:00:00.15	00:00:00.27
Assembler run totals	1775	00:00:04.54	00:00:07.29

The working set limit was 2900 pages.
168114 bytes (329 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1027 non-local and 25 local symbols.
383 source lines were read in Pass 1, producing 67 object records in Pass 2.
79 pages of virtual memory were used to define 25 macros.

```
                                    +---------------------------+

Performance indicators

Phase	Page faults	CPU Time	Elapsed Time
Initialization	24	00:00:00.00	00:00:00.20
Command processing	879	00:00:00.22	00:00:00.72
Pass 1	574	00:00:02.22	00:00:03.53
Symbol table sort	0	00:00:00.15	00:00:00.14
Pass 2	9	00:00:00.61	00:00:01.05
Symbol table output	0	00:00:00.03	00:00:00.06
Psect synopsis output	0	00:00:00.00	00:00:00.00
Cross-reference output	5	00:00:00.10	00:00:00.25
Assembler run totals	1491	00:00:03.33	00:00:05.95

The working set limit was 2900 pages.
138352 bytes (271 pages) of virtual memory were used to buffer the intermediate code.
There were 40 pages of symbol table space allocated to hold 608 non-local and 18 local symbols.
365 source lines were read in Pass 1, producing 44 object records in Pass 2.
88 pages of virtual memory were used to define 23 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	6
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	1
SYS$COMMON:[SYSLIB]LIB.MLB;2	6
SYS$COMMON:[SYSLIB]STARLET.MLB;2	6
TOTALS (all libraries)	19

902 GETS were required to define 19 macros.

There were no errors, warnings or information messages.

0000    106 ;       04      - Ken Chapman, 06-dec-1977, Version 04.
0000    107 ;               DSPR #3  MODIFIED ^C BREAK TO CLI.
0000    108 ;
0000    109 ;       05      - Nick Hougate, 19-dec-1977, Version 05.
0000    110 ;               MADE AX_BUFF, USTKPTR, SSTKPTR, ESTKPTR GLOBAL FOR MEMMGT.
0000    111 ;
0000    112 ;       06      - Nick Hougate, 19-dec-1977, Version 05.
0000    113 ;               MADE ALL STACKS 2 PAGES.
0000    114 ;
0000    115 ;       07      - Nick Hougate, 30-Dec-1977, Version 06 (ESSAA-3.06).
0000    116 ;               DELETE SYMBOL DS$GL_PASSES
0000    117 ;
0000    118 ;       08      - Nick Hougate, 06-Feb-1978, Version 07 (ESSAA-4.00).
0000    119 ;               INCLUDE QIO SUPPORT
0000    120 ;
0000    121 ;               - Tom Soutter, 03-Mar-1978
0000    122 ;       09      ADDED SOFTWARE PCB FOR AST HANDLING
0000    123 ;       10      FIXED SOME BUGS IN PCB SETUP CODE
0000    124 ;       11      DEFINED DIAGNOSTIC PID, SET UP SAME IN SOFTWARE PCB
0000    125 ;
0000    126 ;       12      - Ken Chapman, 23-Mar-1978, Version 08 (ESSAA-4.01).
0000    127 ;               ADDED BUFFER INIT CODE.
0000    128 ;               REMOVED MOVCS AND LDPCTX INSTRUCTIONS.
0000    129 ;
0000    130 ;               - Tom Soutter, 30-Mar-1978
0000    131 ;       13      ADDED CODE TO INITIALIZE THE SYSTEM TIMER
0000    132 ;       14      REMOVED STACK BUFFER PAGES, REDUCED USER STACK TO ONE
0000    133 ;               PAGE AND OVER-MAPPED THE SUPERVISOR & EXECUTIVE STACKS
0000    134 ;               ONTO THE USER STACK
0000    135 ;
0000    136 ;       15      - Nick Hougate, 18-May-1978, Version 09 (ESSAA-4.02).
0000    137 ;               PLACE IPL LEVEL AT 1F AT SYSTEM START UP
0000    138 ;               LOWER IPL LEVEL ONLY AFTER SOFTWARE INITIALIZATION
0000    139 ;
0000    140 ;       16      - Nick Hougate, 09-Jun-1978, Version 10 (ESSAA-4.03).
0000    141 ;               FIX APT ^C PROBLEM
0000    142 ;
0000    143 ;       17      - Nick Hougate, 14-Jun-1978
0000    144 ;               CLEAR EVENTS FLAGS AT SUPERVISOR START
```

```
0000   146 ;                    - Roger Riggs, 10-Aug-1978
0000   147 ;          18        Revised basic program loop
0000   148 ;          19        Fix for changed position of year in DS$GT_NEWYEAR
0000   149 ;                    Added separate allocations for USER, EXEC, and SUPER stacks
0000   150 ;          20        Added call to INI$PTABLE to initialize P-table list at
0000   151 ;                    supervisor start.
0000   152 ;          21        Added code to Auto configure/ATTACH the default load device
0000   153 ;                    when loaded with DIAGBOOT.
0000   154 ;          22        Added process exit handler to execute use cleanup and
0000   155 ;                    deallocate device allocated by select.
0000   156 ;
0000   157 ;          23        - Roger Riggs, 31-Aug-1979
0000   158 ;                    Added initial VDT breakpoint and saved VMB boot flags
0000   159 ;
0000   160 ;          24        - Roger Riggs, 21-Jan-1980, Version 5.2
0000   161 ;                    Added code to always prompt APT on start, also copy
0000   162 ;                    processor type code to EXE$GB_CPUTYPE
0000   163 ;
0000   164 ;          25        - David R. Butenhof, 06-feb-1980
0000   165 ;                    Routine INIT_CONTEXT should force AST delivery enable.
0000   166 ;
0000   167 ;          26        - John Ciukaj, 25-Jan-1980, Version 5.2
0000   168 ;                    Added location BOOT$L_DEVTYP to be loaded from RPB$B_DEVTYP.
0000   169 ;
0000   170 ;          27        - Roger Riggs, 12-Mar-1980
0000   171 ;                    Clear DS$GB_MM_ENB on START 10000, as well as memory managment
0000   172 ;
0000   173 ;                    - Roger Riggs, 24-Mar-1980
0000   174 ;          28        Added code to verify that system identification register
0000   175 ;                    agrees with current supervisor.
0000   176 ;          29        Added code to type message and exit if SYS$INPUT is not
0000   177 ;                    a terminal or a mailbox.  Fix for SPR#11-28511.
0000   178 ;                    Later fix will use RMS for SYS$INPUT I/O in usermode.
0000   179 ;
0000   180 ;                    - Dave Butenhof, -Mar-1980
0000   181 ;          30        Add RMS setup in usermode, to allow supervisor execution
0000   182 ;                    via VMS command file/batch.
0000   183 ;          31        Fix CTL$GL_CCBBASE label define to point to a pointer
0000   184 ;                    longword.  And fix order of arguments to PRINT on SID
0000   185 ;                    mis-match.
0000   186 ;
0000   187 ;          32        - Roger Riggs, 21-May-1980, Version 5.4
0000   188 ;                    Changed order of stacks to allow for memory protection
0000   189 ;                    when MM is on
```

```
                        0000   191 ;                - Roger Riggs, 19-Jun-1980, Version 6.0
                        0000   192 ;         33     Moved IOC$GL_PSFL/BL to Entry
                        0000   193 ;         34     Added JIB
                        0000   194 ;
                        0000   195 ;         35     - Dave Butenhof, 28-aug-1980, Version 6.0
                        0000   196 ;                Add call to RMS$INIT in standalone initialization to
                        0000   197 ;                clear RMS file table.
                        0000   198 ;
                        0000   199 ;                - Roger Riggs, 08-Sept-1980, Version 6.0
                        0000   200 ;         36     Added code to set and restore on exit the default directory
                        0000   201 ;                and disk.
                        0000   202 ;         37     Move translation of load device name to DEF$Q_DEV on
                        0000   203 ;                usemode entry
```

```
                        0000   205 ;
                        0000   206 ;       38      - Roger Riggs, 17-Oct-1980
                        0000   207 ;               Made reference to EXE$GQ_SYSTIME L^ offset.
                        0000   208 ;
                        0000   209 ;               - Dave Butenhof, 17-oct-1980, version 6.1
                        0000   210 ;       39      Add new argument to DSX$CNTRLC; DISABL--if low bit is set,
                        0000   211 ;               disables control C handling, if clear, enables it.  Also
                        0000   212 ;               KB_CHECK ignores control C flag if handling is disabled.
                        0000   213 ;               Also, if user control C routine return failure code, the
                        0000   214 ;               Supervisor will proceed to handle the control C normally
                        0000   215 ;               itself.
                        0000   216 ;       40      Add label BEGIN_BLISS (same as BEGIN) for BLISS routines to
                        0000   217 ;               use after INIT_CONTEXT, since BEGIN is reserved word.
```

```
                                0000   219 ;
                                0000   220 ;       41      - Dave Butenhof, 18-feb-1981, version 6.3
                                0000   221 ;               Delete use of SEP psect.
                                0000   222 ;
                                0000   223 ;       42      - Dave Butenhof, 16-mar-1981, version 6.3
                                0000   224 ;               Fix ^C handling; move flag clears to make user status=0
                                0000   225 ;               return work under APT.
                                0000   226 ;
                                0000   227 ;       43      - Dave Butenhof, 23-mar-1981, version 6.3
                                0000   228 ;               Expand Exec/Supervisor stack to 3 pages each.
```

```
0000    230 ;       44      - Jack Stansbury, 21-Oct-1981, Version 6.5
0000    231 ;               Added calls to QA$MAIN for the QA enhancement.
0000    232 ;               Also added .LIBRARY statements for $DS and $DIAG.
0000    233 ;               Also changed one of the error messages to lower case.
0000    234 ;               Also fixed some truncation errors.
0000    235 ;
0000    236 ;       45      - Jack Stansbury, 10-Nov-1981, Version 6.5
0000    237 ;               Changed ALL W^ to L^.
0000    238 ;
0000    239 ;       46      - Dave Butenhof, 12-Nov-1981, version 6.5
0000    240 ;               Add DS$GB_TYPECODE for 'SET BINARY' function.
0000    241 ;
0000    242 ;       47      - Dave Butenhof, 13-Nov-1981, version 6.5
0000    243 ;               Implement EXIT command (DSV$EXIT).  It will do an
0000    244 ;               $EXIT in user mode, or a HALT in standalone; after
0000    245 ;               doing program cleanup, etc.
0000    246 ;
0000    247 ;       48      - Jack Stansbury, 21-Nov-1981, Version 6.5
0000    248 ;               Commented out several calls to QA_MAIN because it appears as
0000    249 ;               though they will not be needed for the 6.5 DS version.
```

```
                        0000    251 ;
                        0000    252 ;       49      - Dave Butenhof, 14-Dec-1981, version 6.6
                        0000    253 ;               Modify startup to use $GETSYI call in usermode, to get
                        0000    254 ;               the actual processor SID into DSA$GL_SID.
                        0000    255 ;
                        0000    256 ;       50      - Dave Butenhof, 29-Dec-1981, version 6.6
                        0000    257 ;               Add locations to store error counts for HARD, SOFT, DEVICE,
                        0000    258 ;               SYSTEM, and SOFTWARE (ERRSUP) errors.
                        0000    259 ;
                        0000    260 ;       51      - Jack Stansbury, 10-Feb-1982, Version 6.6X
                        0000    261 ;               Added another Control-C handler for the DS to use. This is for
                        0000    262 ;               QA to trap control-c's, but can be used by any other
                        0000    263 ;               DS-integrated facility. See the KB_Check routine for the code.
                        0000    264 ;
                        0000    265 ;       52      - Dave Butenhof, 09-Mar-1982, version 6.6
                        0000    266 ;               Add support for rooted systems.  When booted from DIAGBOOT,
                        0000    267 ;               startup code will do 'SET LOAD' command on the filespec in the
                        0000    268 ;               RPB$T_FILE field.
```

```
                                0000   270 ;       53      - Dave Butenhof, 26-Mar-1982, version 6.7
                                0000   271 ;               Fix rooted system directory support...redefine SYS$DISK when
                                0000   272 ;               translating SYS$SYSROOT.  SYS$SYSROOT:[SYS0.SYSMAINT] don't
                                0000   273 ;               Added SYS$LIBRARY:LIB.
                                0000   274 ;
                                0000   275 ;       54      Marion Baggett, 31-Mar-1982, Version 6.7
                                0000   276 ;               Added SYS$LIBRARY:LIB
                                0000   277 ;
                                0000   278 ;       55      Marion Baggett, 2-Apr-1982, Version 6.7
                                0000   279 ;               Added DS$GL_PREPERR_COUNT field to count device preparation    ;G:2
                                0000   280 ;               errors.                                                        ;G:2
                                0000   281 ;
                                0000   282 ;       56      Marion Baggett, 5-Apr-1982, Version 6.7
                                0000   283 ;               Changed $DS_PRINT to $PRINT macros.
                                0000   284 ;
                                0000   285 ;       57      Marion Baggett, 7-Apr-1982, Version 6.7
                                0000   286 ;               Added $DS_TYPEDEF to define type codes.
                                0000   287 ;
                                0000   288 ;       58      Dave Butenhof, 08-Apr-1982, version 6.7
                                0000   289 ;               Fix truncation error.
                                0000   290 ;
                                0000   291 ;       59      Jack Stansbury, 9-Apr-1982, Version 6.7
                                0000   292 ;               Added $CRD Library statement. Added support for the
                                0000   293 ;               Customer Runnable Diagnostic package.
                                0000   294 ;
                                0000   295 ;       60      Dave Butenhof, 13-Apr-1982, version 6.7
                                0000   296 ;               Add setup of DS$GB_INHIBIT_NAMING, to enable/disable
                                0000   297 ;               generic name enforcement. (Set in APT mode).
```

```
0000    299 ;
0000    300 ;       61      Dave Butenhof, 17-May-1982, version 6.8
0000    301 ;               Fix size of Kernel stack (make it larger to minimize trouble).
0000    302 ;
0000    303 ;       62      Dave Butenhof, 21-May-1982, version 6.8
0000    304 ;               Automatically attach console device at startup, to make
0000    305 ;               RMS and DIRECTORY a bit simpler (no special case for device
0000    306 ;               without Ptable).
0000    307 ;
0000    308 ;       63      Jack Stansbury, 7-June-1982, Version 6.8
0000    309 ;               Added code in DSV$Exit routine that will not allow the user
0000    310 ;               to Continue (console command) once a HALT instruction has been
0000    311 ;               executed - only if CRD-AutoTest bits are set in the R5 passed
0000    312 ;               to the DS.
0000    313 ;
0000    314 ;       64      Jack Stansbury, 9-Jun-1982, Version 6.8
0000    315 ;               Added code in the DSV$Exit routine that will allow output of
0000    316 ;               pertinent CRD variables when a CRD-Internal error occurs. This
0000    317 ;               is indicated by CRD changing the byte in its own dispatch vector
0000    318 ;               area (DS$GA_CRD_Starting_Address + 1) to be one more than the ;G:2
0000    319 ;               absolute value of its dispatch vectors + 2 byte. That is, CRD ;G:2
0000    320 ;               will increment the "positive version number" in its dispatch  ;G:2
0000    321 ;               vector area by one when it detects a internal error. CRD will ;G:2
0000    322 ;               then put the values of a select number of pertinent variables ;G:2
0000    323 ;               into its own dispatch vector area. DSV$Exit will print these  ;G:2
0000    324 ;               out when the user types a console Continue command.           ;G:2
0000    325 ;
0000    326 ;       65      Marion Baggett, 9-June-1982, Version 6.8
0000    327 ;               Increase the size of the interupt stack to 4 pages so the
0000    328 ;               Vax Architecture exerciser will run.
0000    329 ;
0000    330 ;       66      Richard Brown, 15-June-82, Version 6.8
0000    331 ;               Addition of IMAGE_HEADER, which is a buffer to hold the
0000    332 ;               image header of a diagnostic file, if the file was linked
0000    333 ;               with a header.  The header is used by the debugger.
0000    334 ;
0000    335 ;       67      Jack Stansbury, 28-June-1982, Version 6.8
0000    336 ;               Disabled ^C's in stand-alone initialization code so that CRD  ;G:2
0000    337 ;               will have a chance to set up a ^C handler. This takes care of ;G:2
0000    338 ;               the problem of ^C's being typed while DIAGBOOT is running, and ;G:2
0000    339 ;               then having the DS see the ^C before CRD is loaded in (thus   ;G:2
0000    340 ;               causing the DS> prompt to appear without the DS_Start message ;G:2
0000    341 ;               being printed). ^C's are re-enabled in the Begin_0 code.      ;G:2
```

```
                                0000    343 ;
                                0000    344 ;       68      Richard Brown, 16-July-82, Version 6.9
                                0000    345 ;               Addition of code in INIT_CONTEXT to see if the T-bit is set
                                0000    346 ;               in the PSL and if so to set it in the new PSL.  This is so
                                0000    347 ;               that if the debugger has set the T-bit, it will not be cleared
                                0000    348 ;               out when the context is initialized.
                                0000    349 ;
                                0000    350 ;       69      Jack Stansbury, 24-July-1982, Version 6.9
                                0000    351 ;               Added two new routine that return a 1 in R0 iff the correct   ;G:2
                                0000    352 ;               bits are set in Boot$L_R5 for CRD_AutoTest and for            ;G:2
                                0000    353 ;               CRD_MenuTest. Used these routines in the Begin0 part.         ;G:2
                                0000    354 ;
                                0000    355 ;       70      Jack Stansbury, 27-July-1982, Version 6.9
                                0000    356 ;               Added another ^C handler for the VDS. This allows CRD Menu Test ;G:2
                                0000    357 ;               to let the User handle a ^C if the user has established a     ;G:2
                                0000    358 ;               handler routine; but at the same time, if this user routine   ;G:2
                                0000    359 ;               returns failure meaning they did not want to handle it, let the ;G:2
                                0000    360 ;               "third" handler (VDS's second handler) have it. Leave DS$Cli  ;G:2
                                0000    361 ;               as the last chance handler.                                   ;G:2
                                0000    362 ;
                                0000    363 ;       71      Jack Stansbury, 8-September-1982, Version 6.9
                                0000    364 ;               Made some changes to the DSV$Exit routine for CRD Menu Test.  ;G:2
                                0000    365 ;               Also made a few changes to the routines mentioned in 69 above ;G:2
                                0000    366 ;               - they were looking at the wrong bits.                        ;G:2
                                0000    367 ;
                                0000    368 ;       72      Jack Stansbury, 15-September-1982, Version 6.9
                                0000    369 ;               Cleared out the three ^C handler addresses in the VDS         ;G:2
                                0000    370 ;               stand-alone initialization code.                              ;G:2
                                0000    371 ;
                                0000    372 ;       73      Jack Stansbury, September 15, 1982, Version 6.9
                                0000    373 ;               Made the DS$L_UserCntrlC longword global, for use by the CLI  ;G:2
                                0000    374 ;               routine.                                                      ;G:2
                                0000    375 ;
                                0000    376 ;       74      Jack Stansbury, September 23, 1982, Version 6.9
                                0000    377 ;               Added a print statement to be printed if the CRD               ;G:2
                                0000    378 ;               initialization fails.                                         ;G:2
                                0000    379 ;
                                0000    380 ;       75      Jack Stansbury, September 24, 1982, Version 6.9
                                0000    381 ;               Added code to check to see if both CRD bits were set in the R5 ;G:2
                                0000    382 ;               passed to the VDS from Diagboot. If so, print an error message ;G:2
                                0000    383 ;               and exit.                                                     ;G:2
                                0000    384 ;
                                0000    385 ;       76      Jack Stansbury, September 28, 1982, Version 6.9
                                0000    386 ;               Added code to take care of the following: Start up the VDS.   ;G:2
                                0000    387 ;               Type CRD. Hit ^P while CRD is running - get back to ">>>"     ;G:2
                                0000    388 ;               console prompt. Type S 10000 - get a DS> prompt. Type CRD     ;G:2
                                0000    389 ;               again,but the CRD image is already loaded. This was causing a ;G:2
                                0000    390 ;               halt at PC = 00000001. So, the solution is to call the        ;G:2
                                0000    391 ;               Unload_CRD routine when the bits are set in the DSA flags     ;G:2
                                0000    392 ;               longword when the Supervisor is being inited (it is           ;G:2
                                0000    393 ;               normally inited without any of the CRD bits being set).
                                0000    394 ;
                                0000    395 ;       77      Bob Bergazzi    7-Oct-82        Version 6.9
                                0000    396 ;               Changed the way system service vectors are handled; after wecopy ;G:
                                0000    397 ;               the VMS system service vectors to 10200 (in order to get the
                                0000    398 ;               correct word mask), modify each entry point to immediately JMP
                                0000    399 ;               to the corresponding entry point in the real system service   ;G:36
```

```
0000    400 ;               table at 80000xxx. This solves the problem of code in the system
0000    401 ;               service vectors which branches around outside of the three pages
0000    402 ;               which we were copying before.
0000    403 ;
0000    404 ;       78      Bob Bergazzi    24-Nov-82       Version 6.10
0000    405 ;               Added a call to load the PCS on startup (DS$_LOADPCS_S)
0000    406 ;
0000    407 ;       79      Jack Stansbury, 4-Mar-83, Version 6.11
0000    408 ;               Changed the code in the DSR$Check routines (for CRD) - they must
0000    409 ;               check the DSA bits while online, not the Boot$L_R5 longword.
0000    410 ;
0000    411 ;       80      John Ciukaj,    2-Apr.-1983     Version 6.11
0000    412 ;               - Changed code that referenced CRD bits in DSA Flags.
0000    413 ;                 The bits were redefined to distinguish between
0000    414 ;                 online and offline.
0000    415 ;               - Changed name of DSR$Check_... routines to distinguish
0000    416 ;                 between Online and Offline.
0000    417 ;
0000    418 ;       81      Bob Bergazzi    8-Apr-1983      Version 6.11
0000    419 ;               Made on-line mode start up with terminal width set to 80.
0000    420 ;
0000    421 ;       82      Bob Bergazzi    25-April-1983   Version 6.11
0000    422 ;               During boot of ESSAA, we must determine if this is 780 or a
0000    423 ;               785, and if it is a 785, then we need to change
0000    424 ;               the clock overhead factor (DS$GK_USOVR) in the WAITUS routine.
0000    425 ;               This is done by referencing the symbol DSX$WAITUS_USOVR which
0000    426 ;               addresses the beginning of the instruction which uses the
0000    427 ;               overhead factor, and modifying the instruction. This is done
0000    428 ;               in order to avoid adding more instructions to the DSX$WAITUS
0000    429 ;               routine which would change the value of the DS$GK_USOVR for
0000    430 ;               existing processors.
0000    431 ;
0000    432 ;       83      Bob Bergazzi    25-April-1983   Version 6.11
0000    433 ;               Increased SCB size to 4 pages for VENUS. Related changes in
0000    434 ;               SCB module.
0000    435 ;
0000    436 ;       84      John Ciukaj     29-Apr-83       version 6.11
0000    437 ;                               13-May-83
0000    438 ;               DSR$Check.. routines: check both DSA Flags and RPB
0000    439 ;               regardless of Standalone or Online.
0000    440 ;
0000    441 ;       85      Bob Bergazzi    May 16,1983     Version 6.11
0000    442 ;               Changed the order of the .LIB statements.
0000    443 ;
0000    444 ;       86      M.Baggett       May 16, 1983    Version 6.11
0000    445 ;               Get RPB$L_BOOTR2 field from RPB.
0000    446 ;
0000    447 ;       87      Richard Brown   June 22, 1983   Version 6.12
0000    448 ;               Added code to fetch user terminal characteristics
0000    449 ;               and store them in $DSGL_TERMCHAR so the new service
0000    450 ;               $DS_GETTERM can pass them to a diagnostic.
0000    451 ;
0000    452 ;               Added new system service $DS_GETTERM, which returns
0000    453 ;               the characteristics of the user terminal.
0000    454 ;
0000    455 ;       88      Bob Bergazzi    Sep 22, 1983    Version 6.13
0000    456 ;               Added a $CANTIM if a ^C is typed to cancel a $SETIMR
```

```
0000    457 ;               which may have been done at program start for the
0000    458 ;               /TIME switch.
0000    459 ;               Commented out for version 6.13 and 6.14, and 7.0
0000    460 ;
0000    461 ;       89      Bob Bergazzi    11-11-83        Version 6.14
0000    462 ;               Clear the DS$M_CTRLC and DS$M_CTRLO flags before we call
0000    463 ;               a control-c handler. This fixes the problem of terminal
0000    464 ;               output in a ^C handler being suppressed in S/A.
0000    465 ;
0000    466 ;       90      Bob Bergazzi    12-28-83        Version 6.14
0000    467 ;               The definition of JIB$L_ARB in the JIB was removed from VMS V4,
0000    468 ;               so define it to its old offset value (the space in the JIB is
0000    469 ;               still there).
0000    470 ;
0000    471 ;       91      Bob Bergazzi    2-14-84         Version 6.14
0000    472 ;               Moved the code which builds ptables for the console load device
0000    473 ;               and the boot device into the CONFIG module, called by
0000    474 ;               JSB INI$LOAD_DEVICE. This was done so SET MEM could call it.  ;G:2
0000    475 ;
0000    476 ;       92      Richard Brown   May 14, 1984    Version 7.0
0000    477 ;               Added display of legal statement on startup.
0000    478 ;
0000    479 ;       93      M. Baggett      May-17-1984     Version 7.0
0000    480 ;               Allow word length unit to be save in RPB.
0000    481 ;
0000    482 ;       94      Bob Bergazzi    May 18, 1984    Version 7.0
0000    483 ;               Made legal display not print out when running under APT.
0000    484 ;
0000    485 ;       95      Bob Bergazzi    June 19, 1984   Version 7.0
0000    486 ;               Also, do not display legal message when CRD is running.
0000    487 ;
0000    488 ;       96      R.E. Muse       July 13, 1984   Version 7.0
0000    489 ;               Search order bit mask added to $TRNLOG system service.
0000    490 ;               SYS$DISK is now search for in the system logical name
0000    491 ;               table exclusively.
0000    492 ;
0000    493 ;       97      R.E. Muse       19 July 1984    version 7.0
0000    494 ;               logical translation for SYS$SYSROOT added and SYS$DISK
0000    495 ;               removed. Now default directory is "[sys0.sysmaint].
0000    496 ;
0000    497 ;       98      Bob Bergazzi    July 27, 1984   Version 7.1
0000    498 ;               Moved $DS_LOADPCS to after memory is initialized and ptables
0000    499 ;               are built and RMS is initialized, so that we can load
0000    500 ;               patches from a file.
0000    501 ;
0000    502 ;       99      Bob Bergazzi    Aug. 30, 1984   Version 7.1
0000    503 ;               Added call to HDW_CLOCK_SET to do cpu specific clock setup.
0000    504 ;
0000    505 ;       100     Ron Parker      November 1,1984 Version 7.1
0000    506 ;               Added support for CRD_Menutest_Online
0000    507 ;
0000    508 ;       101     RE Muse         Novemeber 7,1984 version 7.1
0000    509 ;               removed PSECT _LAST and placed in each machine specific
0000    510 ;               ONLYnnn module. This was done in particular to accomodate
0000    511 ;               the large SCB page allocation for NAUTILUS, otherwise all
0000    512 ;               supervisor's would carry more SCB page allocation than
0000    513 ;               really needed. ie. nautilus needs 37 pages for the scb.
```

```
0000   514 ;
0000   515 ;       102     M. Baggett      9-Nov-1984      Version 7.1
0000   516 ;               Improved the coding of CASE statement.
0000   517 ;
0000   518 ;       103     Jim Shelhamer   Feb 11, 1985    Version 8.1
0000   519 ;               Added code for Attached Processor EXIT instruction.
0000   520 ;
0000   521 ;       104     Bob Bergazzi    Feb. 13, 1985   Version 8.1
0000   522 ;               Changed location of call to HDW_CLOCK_SET, since it no
0000   523 ;               longer changes DS$GT_NEWYEAR+7.
0000   524 ;
0000   525 ;       105     Ted Salem       Feb. 25, 1985   Version 8.1
0000   526 ;               Added code for simulation of the NI - i.e. may be temporary.
0000   527 ;
0000   528 ;       106     Bob Bergazzi    Feb. 26, 1985   Version 8.1
0000   529 ;               Fix edit [88] (/TIME).
0000   530 ;
0000   531 ;       107     Ted Salem       Feb. 26, 1985   Version 8.1
0000   532 ;               Made NDS$OPEN, RECEIVE_POLL weak symbols.
0000   533 ;
0000   534 ;       108     Bob Bergazzi    Mar. 4, 1985    Version 8.1
0000   535 ;               Commented out edit 106.
0000   536 ;
0000   537 ;       109     M. Baggett      6-Mar-1985      Version 8.1
0000   538 ;               Expanded legal notice to show copyright year.
0000   539 ;
0000   540 ;       110     Ted Salem       March 14, 1985  Version 8.2
0000   541 ;               Added code to clear the MP$R_ACTIVE_SERVICES bitvector.
0000   542 ;
0000   543 ;       111     Domenic Andella 22-May-1985     Version 8.2
0000   544 ;               Added multi-processing support to KB_CHECK.
0000   545 ;
0000   546 ;       112     Domenic Andella 11-Jun-1985     Version 9.0
0000   547 ;               Temporarily add mp symbol MP$GR_BOOTED_PROCESSORS
0000   548 ;               until all mp modules are included in link. Add
0000   549 ;               WEAK symbol definitions.
0000   550 ;
0000   551 ;       113     Bob Bergazzi    11-June-1985    Version 9.0
0000   552 ;               Set up EXE$GL_TENUSEC and EXE$GL_UBDELAY in the
0000   553 ;               BOOTDRIVR module for use by the TIMEDWAIT macro
0000   554 ;               which is in some bootdrivrs.
0000   555 ;
0000   556 ;       114     M. Baggett      19-June-1985    Version 9.0
0000   557 ;               Fix directory if booting from ULTRIX disk.
0000   558 ;
0000   559 ;       115     Jim Shelhamer   24-JUN-1985     Version 9.0
0000   560 ;               Made ds$gt_copyear gloabl, it is referenced by APBOOT8200.
0000   561 ;
0000   562 ;       117     Jim Shelhamer   2-Aug-1985      Version 9.0
0000   563 ;               Took out JSB to VRSETWIDTH.
0000   564 ;               This was messng up characteristics of MBX for VSDP.
0000   565 ;
0000   566 ;       118     M. Baggett      13-Aug-1985     Version 9.0
0000   567 ;               Added field for RPB bootr1.
0000   568 ;
0000   569 ;       119     Bob Bergazzi    30-Sep-1985     Version 9.0
0000   570 ;               T/M for SCORPIO should merely do a normal supervisor
```

```
0000    571 ;               boot, not invoking CRD MENU mode.
0000    572 ;
0000    573 ;       120     Jim Shelhamer   28-Oct-1985     Version 9.1
0000    574 ;               During boot of EDSAA, we must determine if this is 8600 or a
0000    575 ;               8650, and if it is a 8650, then we need to change
0000    576 ;               the clock overhead factor (DS$GK_USOVR) in the WAITUS routine.
0000    577 ;               This is done by referencing the symbol DSX$WAITUS_USOVR which
0000    578 ;               addresses the beginning of the instruction which uses the
0000    579 ;               overhead factor, and modifying the instruction. This is done
0000    580 ;               in order to avoid adding more instructions to the DSX$WAITUS
0000    581 ;               routine which would change the value of the DS$GK_USOVR for
0000    582 ;               existing processors.
0000    583 ;
0000    584 ;       121     Jim Baranski     1-Nov-1985     Version 9.1
0000    585 ;               Un Comment Out START/TIME.
0000    586 ;
0000    587 ;       122     Bob Bergazzi    Jan 17, 1986    Version 9.1
0000    588 ;               For a NAUTILUS supervisor, change the default directory
0000    589 ;               in the online mode from USERFILES to SYSMAINT.
0000    590 ;
0000    591 ;       122     Bob Bergazzi    Jan 17, 1986    Version 9.1
0000    592 ;               For a NAUTILUS supervisor, change the default directory
0000    593 ;               in the online mode from USERFILES to SYSMAINT.
0000    594 ;
0000    595 ;       123     Ted Salem       30-Jan-1986     Version 9.2
0000    596 ;               Moved code in change #110 from Init_common to Begin0.
0000    597 ;
0000    598 ;       124     Bob Bergazzi    12-Feb-1986     Version 10.0                    ;G:2
0000    599 ;               Remove call to LIB$GET_FOREIGN. This was put in as part of      ;G:2
0000    600 ;               an online CRD enhancement, which is no longer needed.           ;G:2
0000    601 ;                                                                               ;G:3
0000    602 ;       125     Jim Shelhamer   5-Mar-1986      Version 10.0                    ;G:3
0000    603 ;               On EXIT from AP, request that PP set up RXCD intr vector        ;G:3
0000    604 ;               to handle console prompt which will occur on HALT inst.         ;G:3
0000    605 ;               Added $PR8SSDEF.                                                ;G:3
0000    606 ;                                                                               ;G:7
0000    607 ;       126     Jim Shelhamer   10-Apr-1986     Version 10.0                    ;G:7
0000    608 ;               Added call to ONLY_CPU, which will be located in                ;G:7
0000    609 ;               each ONLYxxx module. This will provide an area for              ;G:7
0000    610 ;               CPU specific start up code. Also, ignore RXCD intrs.            ;G:13
0000    611 ;                                                                               ;G:15
0000    612 ;       127     Ted Salem       4-May-1986      Version 10.0                    ;G:15
0000    613 ;               Added structures and functionality to read the system           ;G:15
0000    614 ;               type for MicroVax2 based systems.  This is used to              ;G:36
0000    615 ;               distinguish an Aurora from an Andromeda system.                 ;G:15
0000    616 ;               Also, added code to read Module Id for Andromeda.               ;G:15
0000    617 ;                                                                               ;G:16
