```
The working set limit was 4096 pages.
430317 bytes (841 pages) of virtual memory were used to buffer the intermediate code.
There were 130 pages of symbol table space allocated to hold 2328 non-local and 116 local symbols.
2677 source lines were read in Pass 1, producing 172 object records in Pass 2.
256 pages of virtual memory were used to define 89 macros.
```

```
0000     58 ;        09      REMOVE W^ from calls to DSP$XX_READ
0000     59 ;
0000     60 ;                JOHN CIUKAJ     NOV-79
0000     61 ;        10      Modify DSX$LOAD for loadable drivers. BOO$QIO is used for
0000     62 ;                resident driver. Pseudo restart parameter block is developed
0000     63 ;                for use in BOO$QIO.
0000     64 ;
0000     65 ;        11      John Ciukaj     2-15-80
0000     66 ;                Change RPB block building in LOADFILE_SA to reflect new
0000     67 ;                structure of BOOTDRIVER module.
0000     68 ;                Roger Riggs     29-FEB-80
0000     69 ;        12      Added code to support 7th argument to DS$LOAD allowing
0000     70 ;                the program to read sections of the file, the LOAD$_LBN
0000     71 ;                argument supplies the starting logical block number of the
0000     72 ;                first block to be read from the file.
0000     73 ;                Roger Riggs, 5-June-1980, Version 5.4
0000     74 ;        13      Moved code to reset stacks and mode to before DS_CLEANUP is
0000     75 ;                called.
0000     76 ;
0000     77 ;                Dave Butenhof, 27-aug-1980
0000     78 ;        14      Define DEF$Q_DIR to be global, so it is accessible to
0000     79 ;                new standalone RMS routines.
0000     80 ;                Also deleted DSX$LOAD routine it has been moved to DSLOAD.
0000     81 ;                Roger Riggs, 17-Sep-1980, Version 6.0
0000     82 ;        15      Deleted Reference to L$A_LASTADR in DSV$LOAD, MAPFREE
0000     83 ;                now checks the loaded bit and L$A_LASTADR
0000     84 ;
0000     85 ;        16      - Jack Stansbury, 26-Oct-1981, Version 6.-
0000     86 ;                Added .LIBRARY statements for $DS and $DIAG.
0000     87 ;                Also fixed truncation errors.
0000     88 ;
0000     89 ;        17      Marion Baggett, 31-Mar-1982, Version 6.7
0000     90 ;                Added sys$library:lib .
0000     91 ;
0000     92 ;        18      Marion Baggett, 7-Apr-1982, Version 6.7
0000     93 ;                Added $DS_TYPEDEF to define type def codes.
0000     94 ;
0000     95 ;        19      Jack Stansbury, 13-April-1982, Version 6.7
0000     96 ;                Fixed truncation error.
0000     97 ;
0000     98 ;        20      Richard Brown, 15-June-82, Version 6.8
0000     99 ;                Clear image header storage buffer before loading diag.
0000    100 ;                Then save the name of the file being loaded, so the debugger
0000    101 ;                can use it later.
0000    102 ;                Also, clear debugger-resident flag before loading diag.
0000    103 ;
0000    104 ;        21      Richard Brown, 8-Mar-84, Version 6.15
0000    105 ;                Add code to clear all event flags before a new program
0000    106 ;                is loaded.
0000    107 ;
0000    108 ;        22      RE MUSE         15-MAY-84       VERSION 7.0
0000    109 ;                added support for longfile names
0000    110 ;
0000    111 ;        23      M. Baggett      19-FEB-1985     VERSION 8.1
0000    112 ;                Added support for ULTRIX set load.
0000    113 ;
0000    114 ;        24      M. Baggett      21-May-1985     Version 8.2
```

```
                                0000    115 ;               Added more flags for ULTRIX operations
                                0000    116 ;
                                0000    117 ;       25      M. Baggett      3-Jun-1985      Version 8.3
                                0000    118 ;               Changes to set load to support ULTRIX, remove unneed flags,
                                0000    119 ;               and change [23].
                                0000    120 ;
                                0000    121 ;       26      Bob Bergazzi    7-Jan-1986      Version 9.1
                                0000    122 ;               Removed DEF$Q_DEV, DEF$Q_DIR, SYS$SYSROOT, and SYS$DISK
                                0000    123 ;               from this module to the ONLY modules,
                                0000    124 ;               so that the default directory for each system could differ.
                                0000    125 ;
                                0000    126 ;               Steven Fortuna  22-May-1987     Version  10.9
                                0000    127 ;               Add the capablity for giving a SET LOAD command to a device
                                0000    128 ;               name or logical path name without the need for the input
                                0000    129 ;               string to be terminated with a ':'.  Symptom was the
                                0000    130 ;               SET LOAD command would accept input without a ':' but the
                                0000    131 ;               default directory did not change nor was an error reported
                                0000    132 ;               to the user.
                                0000    133 ;
                                0000    134 ;--

Pass 2	21	00:00:00.38	00:00:00.72
Symbol table output	2	00:00:00.02	00:00:00.09
Psect synopsis output	2	00:00:00.01	00:00:00.03
Cross-reference output	7	00:00:00.22	00:00:00.34
Assembler run totals	1568	00:00:02.61	00:00:05.88

The working set limit was 2400 pages.
71433 bytes (140 pages) of virtual memory were used to buffer the intermediate code.
There were 20 pages of symbol table space allocated to hold 290 non-local and 30 local symbols.
527 source lines were read in Pass 1, producing 35 object records in Pass 2.

48 pages of virtual memory were used to define 21 macros.

! Macro library statistics !

Macro library name	Macros defined

Assembler run totals	1430	00:00:02.37	00:00:04.54

The working set limit was 2400 pages.
82994 bytes (163 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 481 non-local and 10 local symbols.
225 source lines were read in Pass 1, producing 39 object records in Pass 2.
41 pages of virtual memory were used to define 16 macros.

0000     40 ;
0000     41 ;                 9-Mar-1978      Roger Riggs
0000     42 ;         01      Fixed DS$INLOOP and DS$CKLOOP
0000     43 ;         02      Fixed BGNSUB and ENDSUB to use .entry and .vector
0000     44 ;                 also changed names to DSX$...
0000     45 ;                 12-Jun-1979     Roger Riggs
0000     46 ;         03      Turn off ^O before typing final loop pass message
0000     47 ;                 Dave Butenhof, 1-Mar-1980
0000     48 ;         04      Changed all references to APT mailbox to use longword
0000     49 ;                 offsets.
0000     50 ;                 Roger Riggs, 18-Mar-1980
0000     51 ;         05      Changed locp on subtest to execute the subtest the
0000     52 ;                 specified number of times instead of the previous +1.
0000     53 ;                 also made post loop on subtest processing call DS_CLEANUP
0000     54 ;                 - Dave Butenhof, 22-Jun-1981, version 6.4
0000     55 ;         06      Fix edit 5: delete explicit setting of DS$V_DONFLG, which
0000     56 ;                 prevented DS_CLEANUP from actually executing the diagnostic's
0000     57 ;                 cleanup code.
0000     58 ;         07      Fix /subtest to work right with /test:n:m.  It will only loop
0000     59 ;                 on the last test selected.
0000     60 ;
0000     61 ;         08      - Jack Stansbury, 21-Oct-1981, Version 6.-
0000     62 ;                 Added calls to QA$MAIN for the QA enhancement.
0000     63 ;                 Also added .LIBRARY statements for $DS and $DIAG.
0000     64 ;                 Also changed the case of some of the error messages.
0000     65 ;
0000     66 ;         09      - Dave Butenhof, 02-Nov-1981, version 6.-
0000     67 ;                 Fix truncation errors throughout.
0000     68 ;
0000     69 ;         10      - Jack Stansbury, 21-Nov-1981, Version 6.5
0000     70 ;                 Commented out a call to QA_MAIN because it appears that it
0000     71 ;                 will not be needed for the 6.5 DS version.
0000     72 ;
0000     73 ;         11      - Jack Stansbury, 13-Jan-1982, Version 6.6
0000     74 ;                 Added comments galore to make things easier to understand.
0000     75 ;
0000     76 ;         12      - Jack Stansbury, 14-Jan-1982, Version 6.6
0000     77 ;                 Added a call to the Summary Code routine in the EndSub routine.
0000     78 ;                 The diagnostic's summary code will now be executed when
0000     79 ;                 the requested number of loops on subtest have been done.
0000     80 ;                 This is more consistent with the EndPass routine.
0000     81 ;
0000     82 ;         13      - Jack Stansbury, 15-Jan-1982, Version 6.6
0000     83 ;                 Changed the FMTLOOPDON message to make it more like the
0000     84 ;                 EndPass message. Also added 'Test x.y' to the message.
0000     85 ;
0000     86 ;         14      - Jack Stansbury, 20-Jan-1982, Version 6.6
0000     87 ;                 Changed the code in the EndSub routine to not print the
0000     88 ;                 header line when the Loop_On_Subtest QA check routine is
0000     89 ;                 executing. This is for QA.
0000     90 ;
0000     91 ;         15      - Jack Stansbury, 29-Mar-1982, Version 6.?
0000     92 ;                 Added some typecoding.
0000     93 ;
0000     94 ;         16      Marion Baggett, 30-mar-1982,    Version 6.7
0000     95 ;                 Changed all $DS_PRINT statements to the new form $PRINT.
```

```
                                0000     96 ;
                                0000     97 ;       17      Dave Butenhof, 08-Apr-1982, version 6.7
                                0000     98 ;               Fix truncation error.
                                0000     99 ;
                                0000    100 ;       18      Jack Stansbury, 13-April-1982, Version 6.7
                                0000    101 ;               Fix two truncation errors.
                                0000    102 ;
                                0000    103 ;       19      Peter Green, 18-JUL-1983, Version 6.12
                                0000    104 ;               Changed $DS_INLOOP to return correct status
                                0000    105 ;               returns, (DS$_ERROR or DS$_NORMAL)

0015   195          .SBTTL  DSX$BgnSub Routine
0015   196 ;++
0015   197 ; FUNCTIONAL DESCRIPTION:
0015   198 ;
0015   199 ;       This routine insures that the diagnostic program is sequencing
0015   200 ;       through its subtests in numerical order.  If an error is detected
0015   201 ;       the operator is notified and the command mode is entered as if
0015   202 ;       "Halt On Error" was selected. This means that the operator may
0015   203 ;       examine the general purpose registers and continue at the next
0015   204 ;       instruction of the program, if desired.
0015   205 ;

Pass 2	9	00:00:00.61	00:00:01.01
Symbol table output	0	00:00:00.05	00:00:00.12
Psect synopsis output	0	00:00:00.00	00:00:00.00
Cross-reference output	6	00:00:00.29	00:00:00.51
Assembler run totals	1592	00:00:03.69	00:00:07.00

The working set limit was 3400 pages.
135589 bytes (265 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 401 non-local and 22 local symbols.
594 source lines were read in Pass 1, producing 54 object records in Pass 2.
99 pages of virtual memory were used to define 31 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	7

Psect synopsis output	2	00:00:00.00	00:00:00.03
Cross-reference output	4	00:00:00.05	00:00:00.05
Assembler run totals	1440	00:00:01.86	00:00:04.52

The working set limit was 2400 pages.
61016 bytes (120 pages) of virtual memory were used to buffer the intermediate code.
There were 20 pages of symbol table space allocated to hold 328 non-local and 6 local symbols.
176 source lines were read in Pass 1, producing 31 object records in Pass 2.
41 pages of virtual memory were used to define 16 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	5
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	1
SYS$COMMON:[SYSLIB]LIB.MLB;2	1
SYS$COMMON:[SYSLIB]STARLET.MLB;2	5
TOTALS (all libraries)	12

590 GETS were required to define 12 macros.

There were no errors, warnings or information messages.

Performance indicators

Phase	Page faults	CPU Time	Elapsed Time
Initialization	40	00:00:00.03	00:00:00.21
Command processing	930	00:00:00.19	00:00:01.05
Pass 1	864	00:00:03.46	00:00:06.14
Symbol table sort	0	00:00:00.32	00:00:00.32
Pass 2	6	00:00:00.87	00:00:01.53
Symbol table output	0	00:00:00.04	00:00:00.15
Psect synopsis output	0	00:00:00.00	00:00:00.00
Cross-reference output	4	00:00:00.20	00:00:00.36
Assembler run totals	1844	00:00:05.11	00:00:09.76

The working set limit was 3400 pages.
208285 bytes (407 pages) of virtual memory were used to buffer the intermediate code.

There were 60 pages of symbol table space allocated to hold 1159 non-local and 30 local symbols.
638 source lines were read in Pass 1, producing 83 object records in Pass 2.
137 pages of virtual memory were used to define 37 macros.

Macro library statistics

```

```
                                0000     58 ;       06      Fixed Release of P1 or SYS space conflict of PTE's
                                0000     59 ;       07      MAPMEM cleanup and set DS$GL_MEMSIZE to bytes of physical
                                0000     60 ;               memory.
                                0000     61 ;               N. HOWGATE      14-NOV-78       VERSION 07 (ESSAA-5.01)
                                0000     62 ;       08      CLEAR MACHINE CHECKS CORRECTLY
                                0000     63 ;       09      FIX BUG IN $DS_SETPRT
                                0000     64 ;       10      Removed dependence of MAPFREE on L$L_UNITS
                                0000     65 ;
                                0000     66 ;       11      Added processor dependent I/O space mapping
                                0000     67 ;               Roger Riggs     6-Sept-1979
                                0000     68 ;       12      Added IO$GQ_PHYSICAL, used to determine where to map
                                0000     69 ;               I/O space in P1 space.
                                0000     70 ;               Roger Riggs, 24-Jan-1980,  Version 5.2
                                0000     71 ;       12      Re-arranged system page table to allow system space addresses
                                0000     72 ;               to map 1 for 1 P0 addresses in the range ^X10000 to the
                                0000     73 ;               top of the P0 page tables.  References to this range will
                                0000     74 ;               reference the same addresses with or without memory management
                                0000     75 ;               enabled.
                                0000     76 ;               Roger Riggs, 5-Mar-1980, Version 5.3
                                0000     77 ;       13      Made page at APT$AT_APTTXT valid, affects APT when
                                0000     78 ;               Memory Management is on.
                                0000     79 ;               Roger Riggs, 12-Mar-1980, Version 5.3
                                0000     80 ;       14      Added byte to save state of memory management, allows
                                0000     81 ;               Memory management to be enabled or disabled after cleanup
                                0000     82 ;               to restore it to what the operator indicated.
                                0000     83 ;               Also if the operator enabled memory management then the program
                                0000     84 ;               is not allowed to turn it off.  DS$GB_MM_ENB is set
                                0000     85 ;               by CLI command SET MM ON and SET MM OFF.
                                0000     86 ;               Also added routines and support for XDELTA
                                0000     87 ;               Roger Riggs, 21-May-1980, Version 5.4
                                0000     88 ;       15      Removed upper limit on amount of memory checked
                                0000     89 ;               Fix DS$EXPREG to set the protection of pages allocated to UW.
                                0000     90 ;               In DS$MMON AND DS$MMOFF return the previous state of MM as
                                0000     91 ;               SS$_WASSET OR SS$_WASCLR and return DS$_WARNING from
                                0000     92 ;               DS$MMOFF if operator set MMON and program is disallowed from
                                0000     93 ;               turning it off, Add code to flush the translation buffer
                                0000     94 ;               before turning MM ON, Set protections on stacks so
                                0000     95 ;               underflows will can be caught by MM.
                                0000     96 ;
                                0000     97 ;               Dave Butenhof   17-jul-1980
                                0000     98 ;       16      Call MAPFREE from MAPMEM to free up memory; to allow
                                0000     99 ;               GETBUF from Supervisor before program is loaded.
                                0000    100 ;               Specifically, for HELP utility.
                                0000    101 ;
                                0000    102 ;               Roger Riggs, 17-Sep-1980, Version 6.0
                                0000    103 ;       17      Changed MAPFREE to check program loaded flag to determine
                                0000    104 ;               how much of low memory to map.
                                0000    105 ;
                                0000    106 ;               Dave Butenhof, 23-feb-1981, version 6.3
                                0000    107 ;       18      Change a word-relative to longword-relative.
                                0000    108 ;       19      Fix two bugs: in EXE$SETPRT, correct return address array
                                0000    109 ;               start address--BICL3 first two operands were reversed.
                                0000    110 ;               in EXE$CNTREG, Comparison of P0 and P1/SYS PTE resulted in
                                0000    111 ;               ERRSUP if M bit was altered, and ignored V and PFN; fix the
                                0000    112 ;               compare mask.
                                0000    113 ;
                                0000    114 ;               - Dave Butenhof, 08-Jun-1981, version 6.4
```

```
0000    115 ;       20      Fix SETPRT some more.  Do a CHMK to force cpu
0000    116 ;               to KERNEL mode, so we can use MFPR.
0000    117 ;
0000    118 ;       21      - dave butenhof, 3-sep-1981, version 6.5
0000    119 ;               alter to use DS with new XDELTA
0000    120 ;
0000    121 ;       22      Jack Stansbury, Version 6.8, May 28, 1982
0000    122 ;               Add an entry point to the ExpReg routine for use by CRD.
0000    123 ;               In stand-alone, ExpReg was allocating space beginning at 200,
0000    124 ;               which is a no-no! Fix it to expand above the Supervisor (as it
0000    125 ;               does on-line).
0000    126 ;
0000    127 ;       23      Richard Brown, Version 6.8, 25-June-82
0000    128 ;               Addition of routines which map a block
0000    129 ;               of memory for the debugger to use.
0000    130 ;
0000    131 ;       24      Richard Brown, Version 6.9, 4-August-82
0000    132 ;               Addition of routine to deallocate memory assigned
0000    133 ;               to the debugger's symbol tables.
0000    134 ;
0000    135 ;       25      Bob Bergazzi    5-Aug-82        Version 6.9
0000    136 ;               Changed MAPFREE to call DSR$CheckLoad (SHOWMEM)
0000    137 ;               to see if a program is loaded - fixes "SET MM ON,
0000    138 ;               ATTACH, Translation not valid fault" bug.
0000    139 ;
0000    140 ;       26      Jack Stansbury  25-Aug-1982     Version 6.9
0000    141 ;               Added two other vaiables: DS$GL_Actual_MemSize and
0000    142 ;               DS$GL_Set_MemSize. The former is the actual size of the memory
0000    143 ;               of the machine. The latter is the size that the operator wishes
0000    144 ;               to set the memory. Also added .Library statements, and changed
0000    145 ;               the PSect from SEP to what they should be. Also changed the
0000    146 ;               insufficient memory message from a PrintF to a Print.
0000    147 ;
0000    148 ;       27      Jack Stansbury  25-Aug-1982     Version 6.9
0000    149 ;               Fixed several truncation errors.
0000    150 ;
0000    151 ;       28      Bob Bergazzi    2-Nov-1982      Version 6.9
0000    152 ;               Changed the ACCESSABLE routine so that it only copies the
0000    153 ;               first quadword of a page rather than every quadword on the
0000    154 ;               page. This results in considerable savings of startup time,
0000    155 ;               especially for NEBULA systems with large amounts of memory
0000    156 ;               (greater than 3 Meg took longer than 10 seconds, causing
0000    157 ;               APT to consider the supervisor hung).
0000    158 ;
0000    159 ;       29      Bob Bergazzi    29-Aug-1983     Version 6.13
0000    160 ;               Changed the value of the minimum memory size required from
0000    161 ;               256K to 512K bytes.
0000    162 ;
0000    163 ;       30      Bob Bergazzi    26-Dec-1984     Version 8.0
0000    164 ;               Turned interrupts off during the STACKPROT routine. If
0000    165 ;               a clock interrupt (or any other interrupt) happened
0000    166 ;               while memory management was turned on in this routine,
0000    167 ;               the console detects an interrupt stack not valid and halts,
0000    168 ;               because this routine sets protection no access before it
0000    169 ;               resets it correctly.
0000    170 ;
0000    171 ;       31      Domenic Andella 30-Jan-1985     Version 8.1
```

```
                        0000   172 ;               Modified routine EXE$EXPREG to receive additional
                        0000   173 ;               argument when called via $DS_GETBUF or $DS_GETSYSBUF.
                        0000   174 ;               Each pages PTE will be marked to indicate which service
                        0000   175 ;               was called.
                        0000   176 ;               Modified routine EXE$CNTREG to receive additional
                        0000   177 ;               argument when called via $DS_RELBUF or $DS_GETSYSBUF
                        0000   178 ;               in order to control deallocation of pages.
                        0000   179 ;
                        0000   180 ;       32      Domenic Andella 28-May-1985     Version 8.2
                        0000   181 ;               Modified routines DSX$MMON/OFF to prohibit
                        0000   182 ;               use if active mp system.
                        0000   183 ;
                        0000   184 ;       33      Ted Salem       18-September-1985  Version 8.2
                        0000   185 ;               Modified above change (#32) to prohibit
                        0000   186 ;               the change of status of memory management rather
                        0000   187 ;               than prohibit the use of DSX$MMON/OFF services.
                        0000   188 ;
                        0000   189 ;       34      Bob Bergazzi    21-NOV-85       Version 9.0
                        0000   190 ;               Changed first SOBGTR in the EXE$EXPREG routine so that a
                        0000   191 ;               GETBUF which asks for all memory wil get it. It was off
                        0000   192 ;               by one.
                        0000   193 ;                                                                       ;G:2
                        0000   194 ;       35      Domenic Andella 4-Apr-1986      Version 10.0            ;G:2
                        0000   195 ;               For DS$_RELSYSBUF service reset prot of deallocated     ;G:2
                        0000   196 ;               page to full access (UW). This is necessary for mp      ;G:2
                        0000   197 ;               systems that use the service and modify protection      ;G:2
                        0000   198 ;               codes for an Attached processors SCB and stacks.        ;G:2
                        0000   199 ;                                                                       ;G:2
                        0000   200 ;       36      M. Baggett      5-Jun-1986      Version 10.1            ;G:3

Performance indicators

Phase	Page faults	CPU Time	Elapsed Time
Initialization	22	00:00:00.03	00:00:00.20
Command processing	886	00:00:00.28	00:00:00.73
Pass 1	1198	00:00:04.69	00:00:06.86
Symbol table sort	0	00:00:00.40	00:00:00.39
Pass 2	75	00:00:01.35	00:00:02.54
Symbol table output	3	00:00:00.10	00:00:00.26
Psect synopsis output	2	00:00:00.01	00:00:00.01
Cross-reference output	22	00:00:00.56	00:00:00.94
Assembler run totals	2210	00:00:07.42	00:00:11.93

The working set limit was 3400 pages.
243189 bytes (475 pages) of virtual memory were used to buffer the intermediate code.
There were 70 pages of symbol table space allocated to hold 1302 non-local and 101 local symbols.
1843 source lines were read in Pass 1, producing 113 object records in Pass 2.
142 pages of virtual memory were used to define 37 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	15
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	6
SYS$COMMON:[SYSLIB]LIB.MLB;2	5
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	0
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	0
SYS$COMMON:[SYSLIB]LIB.MLB;2	0
SYS$COMMON:[SYSLIB]STARLET.MLB;2	14
TOTALS (all libraries)	40

1437 GETS were required to define 40 macros.

There were no errors, warnings or information messages.

Psect synopsis output	0	00:00:00.01	00:00:00.01
Cross-reference output	4	00:00:00.14	00:00:00.26
Assembler run totals	1589	00:00:04.97	00:00:08.49

The working set limit was 3400 pages.
172785 bytes (338 pages) of virtual memory were used to buffer the intermediate code.
There were 90 pages of symbol table space allocated to hold 1690 non-local and 16 local symbols.
592 source lines were read in Pass 1, producing 109 object records in Pass 2.
57 pages of virtual memory were used to define 19 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	0
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	1
SYS$COMMON:[SYSLIB]LIB.MLB;2	8
SYS$COMMON:[SYSLIB]STARLET.MLB;2	6
TOTALS (all libraries)	15

1715 GETS were required to define 15 macros.

There were no errors, warnings or information messages.

                        0000    43 ;       02          Added definition of value DS$GK_USOVR, for
                        0000    44 ;                   WAITUS clock overhead.
                        0000    45 ;                   Roger Riggs, 15-Feb-1980, Version 5.2
                        0000    46 ;       03          Fixed QIOCLEAN_CPU to correctly restore the SCB
                        0000    47 ;                   Dave Butenhof, 07-May-1981, version 6.4
                        0000    48 ;       04          Fix PURGDATAP routine to set correct address for UBA map.
                        0000    49 ;       05          ATTACH DW730, not DW750.
                        0000    50 ;
                        0000    51 ;       06          - Dave Butenhof, 23-Nov-1981, version 6.5
                        0000    52 ;                   Add .LIBRARY declarations, change SEP Psect to Code and
                        0000    53 ;                   Work.
                        0000    54 ;
                        0000    55 ;       07          - Dave Butenhof, 09-Mar-1982, version 6.6
                        0000    56 ;                   Fix truncation errors.
                        0000    57 ;
```

```
0000     58 ;        08      Bob Bergazzi    April 26, 1983  Version 6.11
0000     59 ;                Added ONLY_SCB routine for VENUS. Does nothing for NEBULA.
0000     60 ;
0000     61 ;        09      Bob Bergazzi    May 16, 1983    Version 6.11
0000     62 ;                Changed the order of the .LIB statements.
0000     63 ;
0000     64 ;        10      Bob Bergazzi 11-16-83   Version 6.14
0000     65 ;                Changed MODNAM from ONLY750 to ONY730.
0000     66 ;
0000     67 ;        11      Bob Bergazzi    Jan. 25, 1984   Version 6.14
0000     68 ;                Added ONLY_CLOCK_INIT routine, which reads the TODR.
0000     69 ;                We no longer want to MFPR the TODR in CLK$RE_INIT
0000     70 ;                because not all cpus read the TODR with an MFPR.
0000     71 ;                Also, TODR is now defined by $PR730DEF as PR730$_TODR.
0000     72 ;
0000     73 ;        12      Bob Bergazzi    May 9, 1984     Version 7.0
0000     74 ;                Added UBINTSZ in order to remove code from QIO.
0000     75 ;
0000     76 ;        13      Bob Bergazzi    Aug. 27, 1984   Version 7.1
0000     77 ;                Removed ONLY_CLOCK_INIT routine.
0000     78 ;
0000     79 ;        14      Bob Bergazzi    Aug. 29, 1984   Version 7.1
0000     80 ;                Added HDW_CLOCK_SET routine. Does nothing for 11/730.
0000     81 ;
0000     82 ;        15      Bob Bergazzi    Oct. 9, 1984    Version 7.1
0000     83 ;                Added EXE$GL_TENUSEC and EXE$GL_UBDELAY values for use by
0000     84 ;                bootdrivrs that use the TIMEDWAIT macro (PABTDRIVR).
0000     85 ;
0000     86 ;        16      RE Muse         Nov.7,1984      version 7.1
0000     87 ;                This psect was originally in the kernel module and now
0000     88 ;                becomes machine specific to accomodate the differences
0000     89 ;                for scb and unexpected handlers page allocation.
0000     90 ;
0000     91 ;        17      Domenic Andella 9-Apr-85        Version 8.2
0000     92 ;                Establish global location to store the primary cpu
0000     93 ;                identifier number for use by multi-processing in
0000     94 ;                routine MAP$IOSPACE.
0000     95 ;
0000     96 ;        18      R.E. Muse       9 May 85        Version 8.2
0000     97 ;
0000     98 ;                incorporate the only_attach routine
0000     99 ;
0000    100 ;        19      Bob Bergazzi    7-June-1985     Version 8.3
0000    101 ;                Change EXE$GL_TENUSEC and EXE$GL_UBDELAY to
0000    102 ;                ONLY$GL_TENUSEC and ONLY$GL_UBDELAY because the former
0000    103 ;                are set from the latter at boot time, and the former
0000    104 ;                symbols are now kept in the BOOTDRIVR module.
0000    105 ;                This is so the TIMEDWAIT macro in some bootdrivr modules
0000    106 ;                will work.
0000    107 ;
0000    108 ;        20      M. Baggett      21-June-1985    Version 8.3
0000    109 ;                Truncation error.
0000    110 ;
0000    111 ;        21      Ted Salem       21-November-1985 Version 9.2
0000    112 ;                Added DSR$ONLY_CONSOLE_CONFIG to all ONLY modules.
0000    113 ;
0000    114 ;        22      Bob Bergazzi    7-Jan-1986      Version 9.1
```

```
0000   115 ;               Added DEF$Q_DEV, DEF$Q_DIR, SYS$SYSROOT, and SYS$DISK. These
0000   116 ;               were removed from the LOAD module so that the default directory
0000   117 ;               could be system specific.
0000   118 ;                                                                          ;G:2
0000   119 ;       23      Jim Shelhamer   10-Apr-1986     Version 10.0               ;G:2
0000   120 ;               Added ONLY_CPU section.                                    ;G:2
0000   121 ;                                                                          ;G:3
0000   122 ;               David Gearin    23-Oct-1987     Version 10.10              ;G:3
0000   123 ;               Added code for extended p-table format.                    ;G:3
0000   124 ;--

Pass 1	1007	00:00:03.57	00:00:07.01
Symbol table sort	0	00:00:00.25	00:00:00.24
Pass 2	55	00:00:00.87	00:00:02.12
Symbol table output	2	00:00:00.04	00:00:00.23
Psect synopsis output	2	00:00:00.02	00:00:00.01
Cross-reference output	6	00:00:00.28	00:00:00.46
Assembler run totals	2010	00:00:05.30	00:00:11.33

```
The working set limit was 2900 pages.
186545 bytes (365 pages) of virtual memory were used to buffer the intermediate code.
There were 50 pages of symbol table space allocated to hold 936 non-local and 16 local symbols.
834 source lines were read in Pass 1, producing 77 object records in Pass 2.
144 pages of virtual memory were used to define 36 macros.
```

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	10
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	2
SYS$COMMON:[SYSLIB]LIB.MLB;2	5
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	0
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	0
SYS$COMMON:[SYSLIB]LIB.MLB;2	0
SYS$COMMON:[SYSLIB]STARLET.MLB;2	12
TOTALS (all libraries)	29

```
1212 GETS were required to define 29 macros.

There were no errors, warnings or information messages.

0000    33 ; FACILITY:     VAX DIAGNOSTIC SUPERVISOR
0000    34 ;
0000    35 ; ABSTRACT: This version of PARAM was created solely for
0000    36 ;           use in Scorpio and Nautilus to support multiprocessing.
0000    37 ;
0000    38 ; ENVIRONMENT:
0000    39 ;
0000    40 ; AUTHOR:       TOM SOUTTER     10-NOV-77       VERSION 01
0000    41 ;
0000    42 ; MODIFIED BY:
0000    43 ;                KEN CHAPMAN     03-FEB-78       VERSION 02 (ESSAA-3.07).
0000    44 ;       01       CHANGED UNIT NUMBER CHECK IN $GPHARD FROM SIGNED TO MAGNITUDE.
0000    45 ;                Roger Riggs     15-JUL-78
0000    46 ;       02       Rewrite to shorten and let GETLINE do the prompting
0000    47 ;                so that in script mode the prompts come out correctly.
0000    48 ;                Fix entry points to conform to naming conventions.
0000    49 ;                Also use .ENTRY ... ENTRY fixed to use .VECTOR
0000    50 ;                Also removed MOVC5 in GETSTRING
0000    51 ;                Roger Riggs     13-March-1978
0000    52 ;       03       Removed DS_GETPARAM, unnecessary since P-code was removed
0000    53 ;                Roger Riggs, 28-May-1980, Version 5.4
0000    54 ;       04       Fixed to correctly return 0 in R1 if default answer was
0000    55 ;                given to DS$ASKSTR. Also fixed size of field in ASKDATA
0000    56 ;                Roger RIggs, 19-Jun-1980, Version 5.5
0000    57 ;       05       Fixed default value when prompt was disabled
```

```
0000     58 ;                Roger Riggs, 16-Oct-1980
0000     59 ;        06      Fixed bug that failed to give default values on prompt
0000     60 ;                in ASKDATA, ASKVLD, ASKADR.
0000     61 ;
0000     62 ;        07      - Jack Stansbury, 22-Oct-1981, Version 6.-
0000     63 ;                Changed the .PSECT CODE statement on line 117 that was
0000     64 ;                commented out (for some strange reason) to .PSECT CODE.
0000     65 ;                Also took out the $DS_HDRDEF statement since none of the
0000     66 ;                diagnostic program header symbols are used here!
0000     67 ;                Also fixed some truncation errors.
0000     68 ;                Also changed some messages to mixed case.
0000     69 ;                Also added calls to the QA_MAIN macro and DSQA for QA.
0000     70 ;                Also added .LIBRARY statements for $DS and $DIAG.
0000     71 ;
0000     72 ;        08      - Jack Stansbury, 30-Nov-1981, Version 6.5
0000     73 ;                Added some more code for the QA routines.
0000     74 ;
0000     75 ;        09      - Jack Stansbury, 5-Dec-1981, Version 6.6
0000     76 ;                Changed the entry masks on each of the .ENTRY lines so
0000     77 ;                that ALL the registers are saved (rather than only those
0000     78 ;                used). This is so that the QA dump routine can find all
0000     79 ;                the registers in the call frame set up for these
0000     80 ;                ASK routines.
0000     81 ;
0000     82 ;        10      Marion Baggett, 31-Mar-1982, Version 6.7
0000     83 ;                Changed all $DS_PRINT type statements to $PRINT form.
0000     84 ;
0000     85 ;        11      Marion Baggett, 7-Apr-1982, Version 6.7
0000     86 ;                Added macro $DS_TYPEDEF definition.
0000     87 ;
0000     88 ;        12      Amy Iorio, 25-June-1985, Version 9.0
0000     89 ;                Added $DS> to ASK macro prompts.
0000     90 ;
0000     91 ;        13      Domenic Andella 26-June-1985    9.0
0000     92 ;                "Yes" transfer address in routine
0000     93 ;                DSX$GETLOGICAL must be altered to
0000     94 ;                load the saved FP's pc instead of
0000     95 ;                the currect FP's to compensate
0000     96 ;                for additional call frame generated
0000     97 ;                as a result of interlocking code.
0000     98 ;
0000     99 ;        14      Amy Iorio,      22-July-1985    9.0
0000    100 ;                Took $DS> change out.
0000    101 ;
0000    102 ;        15      Domenic Andella 7-August-1985   9.0
0000    103 ;                Comment out modification 13 until
0000    104 ;                interlocking code is reinstated.
0000    105 ;
0000    106 ;        16      Domenic Andella 30-August-1985  9.1
0000    107 ;                Reinstate edit 13.
0000    108 ;
0000    109 ;        17      Domenic Andella 17-Dec-1985     9.1
0000    110 ;                Modify routine DSX$GETLOGICAL such that if cpu
0000    111 ;                is a Scorpio or Nautilus, frame pointer will be
0000    112 ;                altered to accomodate interlocking.
0000    113 ;
0000    114 ;        18      Domenic Andella 31-Dec-1985     9.1
```

```
                                0000   115 ;                Add extrn symbol ref for DS$GK_SID
                                0000   116 ;--
```

Pass 2	28	00:00:00.75	00:00:01.54
Symbol table output	2	00:00:00.04	00:00:00.08
Psect synopsis output	2	00:00:00.00	00:00:00.00
Cross-reference output	7	00:00:00.36	00:00:00.63
Assembler run totals	1798	00:00:04.22	00:00:07.84

The working set limit was 2900 pages.
137253 bytes (269 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 349 non-local and 50 local symbols.
935 source lines were read in Pass 1, producing 56 object records in Pass 2.
86 pages of virtual memory were used to define 22 macros.

Macro library statistics

Macro library name	Macros defined

0000    27 ;++
0000    28 ; FACILITY:     VAX DIAGNOSTIC SUPERVISOR.
0000    29 ;
0000    30 ; ABSTRACT:
0000    31 ;
0000    32 ; ENVIRONMENT:
0000    33 ;
0000    34 ; AUTHOR:       KEN CHAPMAN     10-NOV-77       VERSION 01.
0000    35 ;
0000    36 ; MODIFIED BY:
0000    37 ;               KEN CHAPMAN     02-FEB-78       VERSION 02 (ESSAA-3.07).
0000    38 ;       01      ADDED QUADWORD DATA CAPABILITY.
0000    39 ;       02      ADDED STRING MATCH FUNCTIO.
0000    40 ;               Roger Riggs     6-NOV-1978
0000    41 ;       03      ADDED KEYWORD MATCH FUNCTION AND MADE SOME SUBROUTINES
0000    42 ;               USEFUL FROM OTHER PARTS OF THE SUPERVISOR.
0000    43 ;       04      Modified keyword construct.
0000    44 ;               Dave Butenhof, 13-feb-1981, version 6.3
0000    45 ;       05      Add parse table command code for SYMBOL type, so CLI can
0000    46 ;               recognise $ and _ in section names.
0000    47 ;
0000    48 ;       06      - Jack Stansbury, 28-Oct-1981, Version 6.-
0000    49 ;               Fixed a few truncation errors. Also added .LIBRARY statements
0000    50 ;               for $DS and $DIAG.
0000    51 ;
0000    52 ;       07      - Dave Butenhof, 10-Nov-1981, version 6.-
0000    53 ;               Add new PARSE codes, CLI$K_COMMA and CLI$K_VALSEP.  The
0000    54 ;               former traverses the sequence "<blank>,<blank>", while the
0000    55 ;               latter traverses "<blank>(=|:)<blank>".  These will make
0000    56 ;               CLI simpler.  Added .LIBRARY for LIB, since I added CASE
0000    57 ;               macro useage
```

```
0000     58 ;
0000     59 ;       08      - Dave Butenhof, 11-Nov-1981, version 6.-
0000     60 ;               Add another PARSE code, CLI$K_EOL to check for end of
0000     61 ;               line (considering comments).
0000     62 ;
0000     63 ;       09      - Dave Butenhof, 11-Nov-1981, version 6.-
0000     64 ;               Again, make things easier for CLI by adding extra (internal
0000     65 ;               only) entry point for PARSE.  DSX$SUPERPARSE won't stop at
0000     66 ;               physical end of line; it'll keep parsing the null string until
0000     67 ;               told to stop.
0000     68 ;
0000     69 ;       10      - Dave Butenhof, 13-Nov-1981, version 6.5
0000     70 ;               One more time...add CLI$K_CALL and CLI$K_RETURN functions
0000     71 ;               for CLI convenience.  The parse table is just too complex.
0000     72 ;               Also, CLI$K_BIFS to test subparse return code
0000     73 ;
0000     74 ;       11      - Dave Butenhof, 03-Feb-1982, Version 6.6
0000     75 ;               Add Scan$File to allow wildcards (* and %) in file names.
0000     76 ;               This is for DIRECTORY...CLI will allow them in RUN, etc;
0000     77 ;               but it won't work too well.  Also, add a macro version of
0000     78 ;               BREAKUP_FILE (for merging default file specs) here...it's
0000     79 ;               much more code efficient than the bliss version.
0000     80 ;
0000     81 ;       12      Jack Stansbury, 15-Dec-1982, Version 6.10
0000     82 ;               Fixed the code in TrvEol to fix a bug where a CLI$K_EOL was
0000     83 ;               being done twice, and causing an error when a comment
0000     84 ;               followed a DS command. The comment character was being
0000     85 ;               skipped, but not the rest of the line after the '!'. Thus,
0000     86 ;               the second time the TrvEol was called, R5 would point to the
0000     87 ;               character after the '!'. Now I set R4 = 0 (the number of
0000     88 ;               characters remaining in the line) and set R5 to point to the
0000     89 ;               real end of the line (the NEWLINE character).
0000     90 ;
0000     91 ;       13      Bob Bergazzi    May 16,1983     Version 6.11
0000     92 ;               Changed the order of the .LIB statements.
0000     93 ;
0000     94 ;       14      M. Baggett      Nov 16,1983     Version 6.13
0000     95 ;               Allow device name of the form ' name$aaann' to be used as load
0000     96 ;               devices.
0000     97 ;
0000     98 ;       15      RE MUSE         MAY 8,1984      Version 7.0
0000     99 ;               Allow device names of the form 'node$ggan' to be used as load
0000    100 ;               devices
0000    101 ;
0000    102 ;       16      M. Baggett      14-Nov-1984     Version 7.1
0000    103 ;               Allow device names of the form '$n$ggan
0000    104 ;
0000    105 ;       17      M. Baggett      19-FEB-1985     Version 8.1
0000    106 ;               Support ULTRIX file structure.
0000    107 ;
0000    108 ;       18      M. Baggett      22-May-1985     Version 8.2
0000    109 ;               Change ULTRIX directory string parsing.
0000    110 ;
0000    111 ;       19      M. Baggett      1-Jun-1985      Version 9.0
0000    112 ;               Change Ultrix filename parsing.
0000    113 ;
0000    114 ;       20      M. Baggett      24-Aug-1985     VDS 9.0

Psect synopsis output	0	00:00:00.01	00:00:00.01
Cross-reference output	4	00:00:00.35	00:00:00.61
Assembler run totals	1429	00:00:03.07	00:00:06.32

The working set limit was 2900 pages.
74202 bytes (145 pages) of virtual memory were used to buffer the intermediate code.
There were 20 pages of symbol table space allocated to hold 289 non-local and 67 local symbols.
1126 source lines were read in Pass 1, producing 41 object records in Pass 2.
49 pages of virtual memory were used to define 15 macros.

0000     40 ;               Added DSX$PRINTI similar to DSX$PRINTF but always prints even
0000     41 ;               in APT mode. Changed prefix on print routines to DSX$PRINTx
0000     42 ;
0000     43 ;       02      Roger Riggs     12-Jun-78
0000     44 ;               Added usermode cancel and setmode
0000     45 ;
0000     46 ;       03      Roger Riggs     1-OCT-1979
0000     47 ;               Changed W^ to L^ on DSA$GL_FLAGS references
0000     48 ;
0000     49 ;       04      Roger Riggs, 14-Jan-1979, Version 5.2
0000     50 ;               Added code to DSX$CVTREG to allow the user
0000     51 ;               to specify a code for the mnemonic string instead of
0000     52 ;               the string itself codes are used for transportabile
0000     53 ;               diagnostics and represent a generic type of data,
0000     54 ;               i.e. UNIBUS map register.
0000     55 ;
0000     56 ;       05      Dave Butenhof 29-apr-80
0000     57 ;               Use RMS for output if DS$V_BATCH flag is set (running
0000     58 ;               under VMS batch/command file).
0000     59 ;
0000     60 ;       06      Dave Butenhof, 16-oct-1980, version 6.1
0000     61 ;               Set flag DS$V_OUTPUT on PRINT call.
0000     62 ;               Also have print use stack buffer for FAO output to avoid
0000     63 ;               conflict with SCRIPT prompt formatting.
0000     64 ;
0000     65 ;       07      - Jack Stansbury, 28-Oct-1981, Version 6.-
0000     66 ;               Added .LIBRARY statements for $DS and $DIAG. Fixed
0000     67 ;               truncation errors.
0000     68 ;
0000     69 ;       08      - Dave Butenhof, 02-Nov-1981, version 6.-
0000     70 ;               Fix truncation error.
0000     71 ;
0000     72 ;       09      - Dave Butenhof, 16-Nov-1981, version 6.5
0000     73 ;               Enhance to provide capability of outputting a binary 'type
0000     74 ;               code' byte preceding each and every message output by the
0000     75 ;               Supervisor.  This is controlled by the SET [CLEAR] BINARY
0000     76 ;               command.
0000     77 ;
0000     78 ;       10      - Jack Stansbury, 23-Mar-1982, Version 6.?
0000     79 ;               Took out the RTypeMsg routine because it is now obselete
0000     80 ;               with typecoding and with the Print routine. Also added a
0000     81 ;               "!/" to the message output by the print routine when
0000     82 ;               Debug_The_Sucker has been set to one.
0000     83 ;
0000     84 ;       11      Jack Stansbury, 8-Apr-1982, Version 6.7
```

```
0000     85 ;              Added code to the DSX$TypeOut routine to call the CRD
0000     86 ;              routine. Also added a .Library statement for /$CRD/,
0000     87 ;              the new CRD library. Also changed some statements to
0000     88 ;              the new DS macros (Br_If_ ...).
0000     89 ;
0000     90 ;        12    Marion Baggett, 9-Apr-1982, Version 6.7
0000     91 ;              Ordered .library statements.
0000     92 ;
0000     93 ;        13    Jack Stansbury, 12-Apr-1982, Version 6.7
0000     94 ;              Changed the code in DSX$TypeOut a bit so that the CRD routine
0000     95 ;              is not called if the TypeCode is CRD_AutoTest. This allows CRD
0000     96 ;              Print's to go through without the CRD routine being called.
0000     97 ;
0000     98 ;        14    Jack Stansbury, 6-May-1982, Version 6.8
0000     99 ;              Added code in DSX$TypeOut to supress outputting the binary
0000    100 ;              typecode when CRD-AutoTest is running (which, in itself, implies
0000    101 ;              that the BINARY flag has been set on).
0000    102 ;
0000    103 ;        15    Jack Stansbury, 24-July-1982, Version 6.9
0000    104 ;              Added support for the Menu Test of CRD.
0000    105 ;
0000    106 ;        16    Bob Bergazzi    30-March-1983   Version 6.11
0000    107 ;              Added guts of SET PAGE command: DSV$SHOWPAGE, DSV$SETPAGE, and
0000    108 ;              in DSX$TYPE_OUT.
0000    109 ;
0000    110 ;        17    John Ciukaj,    2-Apr.-1983,    Version 6.11
0000    111 ;              - Changed references to CRD bits in DSA Flags since
0000    112 ;                they were redefined to distinguish between online
0000    113 ;                and offline.
0000    114 ;
0000    115 ;        18    Peter Green     18-JUL-1983     Version 6.12
0000    116 ;              Changed print macros to test R0 for status such that
0000    117 ;              on error an immediate exit occurs instead of attempting
0000    118 ;              to print the message.
0000    119 ;
0000    120 ;        19    Richard Brown   7-June-1984     Version 7.0
0000    121 ;              Added null arguments to SYS$QIO call in DSX$TYPE_OUT.
0000    122 ;              Changed channel number from TTIN to TTOUT in two $QIO
0000    123 ;              calls in DSX$TYPE_OUT, prompting for user response
0000    124 ;              to display next page of terminal output.
0000    125 ;
0000    126 ;        20    Ron Parker      21-Jan-1985
0000    127 ;              Added test for CRD online condition
0000    128 ;
0000    129 ;        21    Amy Iorio       15-Feb-1985     Version 8.1
0000    130 ;              Added routine for $DS_PRINTREV
0000    131 ;
0000    132 ;        22    Amy Iorio       18-Mar-1985     Version 8.2
0000    133 ;              Modified Printrev to work with error
0000    134 ;
0000    135 ;        23    Amy Iorio       27-Mar-1985     Version 8.2
0000    136 ;              Fix to Printrev (bits set and prlink print)
0000    137 ;
0000    138 ;        24    Ted Salem       8-April-1985    Version 8.2
0000    139 ;              Added code to interlock all print services.
0000    140 ;
0000    141 ;        25    Amy Iorio       18-April-1985   Version 8.2
```

```
                                0000   142 ;               Fix to Printrev (greaterbit and all bit)
                                0000   143 ;

                     680          .Subtitle       DSX$Print Routine - Load type code byte
02D3   681 ;++
02D3   682 ; Functional Description:
02D3   683 ;
02D3   684 ;       This routine is the control point for Supervisor type coding.
02D3   685 ;       It sets the typecode byte to the proper value, and calls the
02D3   686 ;       desired PRINT routine.  Any print which does not go through
02D3   687 ;       this routine, and which does not set DS$GB_TYPECODE explicitly
02D3   688 ;       will have the default (current) type code [normally 0].
02D3   689 ;
02D3   690 ; Input Parameters:
02D3   691 ;
02D3   692 ;       4(ap)           Type code value (negative of typecode indicates
02D3   693 ;                       that code is 'sticky', and will not be cleared.
02D3   694 ;       8(ap)           Which PRINTx is desired
02D3   695 ;       12(ap)          Address of ASCIC format string
02D3   696 ;       16(ap)          First FAO argument (as in DSX$PRINTx routines)
02D3   697 ;         .
02D3   698 ;         .
02D3   699 ;         .
02D3   700 ;
02D3   701 ; Output Parameters:
02D3   702 ;

Assembler run totals	2238	00:00:06.99	00:00:12.84

```
The working set limit was 3400 pages.
248434 bytes (486 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 978 non-local and 130 local symbols.
1538 source lines were read in Pass 1, producing 102 object records in Pass 2.
136 pages of virtual memory were used to define 48 macros.
```

;    0185  1      ! FUNCTIONAL DESCRIPTION:
;    0186  1      !
;    0187  1      !       This condition handler routine can be used to field any exceptions
;    0188  1      !       that indicate memory is in accessable.
;    0189  1      !       It does an SYS$UNWIND to the level of the caller of the routine
;    0190  1      !       that generated the condition.  The conditions trapped are
;    0191  1      !       DS$_MCHK, SS$_ACCVIO, and SS$_TRANSL.  The value of the aborted
;    0192  1      !       routine will be one of these values.
;    0193  1      !
;    0194  1      ! FORMAL PARAMETERS:

0000    36 ; ABSTRACT:
0000    37 ;       This module contains the bootstrap device driver for the
0000    38 ;       UDA 50 disks.
0000    39 ;
0000    40 ; ENVIRONMENT:  IPL 31, kernel mode, code must be PIC
0000    41 ;
0000    42 ; AUTHOR:  Kerbey T. Altmann,   CREATION DATE:  20-Nov-1981
0000    43 ;
0000    44 ; MODIFIED BY:
0000    45 ;
0000    46 ; [01] Dave Butenhof, 15-Apr-1982
0000    47 ;       Modify to run under VDS. Partic, change $BOOT_DRIVER macro
0000    48 ;       to exclude fields not supported by VDS, and have I/O entry
0000    49 ;       call init routine a each call (since diagnostics may be
0000    50 ;       run, etc. between calls).
0000    51 ;                                                                          ;G:2
0000    52 ;       David Gearin    06-Nov-1987                                        ;G:2
0000    53 ;       Modify move from RPB$W_UNIT from byte to word.                     ;G:2
0000    54 ;       This allows for access to large device #'s.                        ;G:2
0000    55 ;--

Assembler run totals	1589	00:00:05.20	00:00:07.98

The working set limit was 3400 pages.
169684 bytes (332 pages) of virtual memory were used to buffer the intermediate code.
There were 90 pages of symbol table space allocated to hold 1676 non-local and 9 local symbols.
440 source lines were read in Pass 1, producing 109 object records in Pass 2.
57 pages of virtual memory were used to define 19 macros.

```
                                    +---------------------------+
                                    ! Macro library statistics !
                                    +---------------------------+

Macro library name                                  Macros defined
------------------                                  --------------

;    0034  0      !
;    0035  0      !       This module contains the support routines required to perform QA on diagnostic programs.
;    0036  0      !
;    0037  0      ! AUTHOR:
;    0038  0      !
;    0039  0      !       Jack Stansbury
;    0040  0      !
;    0041  0      ! CREATION DATE:
;    0042  0      !
;    0043  0      !               15-October-1981, Version 6.5-00
;    0044  0      !       00      Put in code for all the support routines plus the following check routines: QA$Normal_Start,
;    0045  0      !               QA$Multiple_Pass, QA$Loop_On_Test, QA$Run_Backwards.
```

```
;    0047  0      ! MODIFIED:
;    0048  0      !
;    0049  0      !       01      Jack Stansbury, 14-December-1981, Version 6.6
;    0050  0      !               Added remaining QA check routines. Split QA.B32 into two different modules: QAMAIN.B32
;    0051  0      !               (this one) and QACHECKS.B32. While this one contains the support routines, the latter contains
;    0052  0      !               the actual check routines.
;    0053  0      !
;    0054  0      !       02      Jack Stansbury, 5-Jan-1982, Version 6.6
;    0055  0      !               Changed the code in QA$Dump to not print R0 and R1 in the register dump. There is no need to
;    0056  0      !               print these since they are not saved by the CALLx instructions.
;    0057  0      !
;    0058  0      !       03      Jack Stansbury, 1-Feb-1982, Version 6.6
;    0059  0      !               Released the three Supervisors to BSDE to find bugs. This includes all the check routine up to
;    0060  0      !               and including the Error Phase One check.
;    0061  0      !
;    0062  0      !       04      Jack Stansbury, 1-Feb-1982, Version 6.6
;    0063  0      !               Changed the headings on the two table printouts to make the table name more distinctive.
;    0064  0      !
;    0065  0      !       05      Jack Stansbury, 11-Feb-1982, Version 6.6X
;    0066  0      !               Changed the DSX$Branch routine so as to make it compatible with Sam Duncan! He wanted R0 saved
;    0067  0      !               across the branch macro code expansion, so I made significant changes to both the branch macros
;    0068  0      !               (in DIAG.*) and to this branch routine. All of that just for Sam!
;    0069  0      !
;    0070  0      !       06      Jack Stansbury, 27-July-1982, Version 6.9
;    0071  0      !               Changed the spelling of the VDS ^C handler variable.
;    0072  0      !
;    0073  0      !       07      Jack Stansbury, 19-Jan-1983, Version 6.10 (?)
;    0074  0      !               Took out all the references to any of the checks above the Run Backwards check. This
;    0075  0      !               includes taking out the previously entered Error Phase One check. It doesn't work
;    0076  0      !               properly with subroutines in diagnostic programs.
;    0077  0      !
;    0078  0      !       08      Bob Bergazzi    May 17, 1983    Version 6.11
;    0079  0      !               Changed the order of searching libraries.
;    0080  0      !--

;    0404  1
;    0405  1      !++
;    0406  1      ! FUNCTIONAL DESCRIPTION:
;    0407  1      !
;    0408  1      !       This global routine is called by the $DS_Branch macros. It decides if the branch should be taken.
;    0409  1      !       If the QA flag is set, it will call QA$Main, which calls the appropriate check routine. NOTE:
;    0410  1      !       This routine preserves R1 and attempts to preserve R0 when not forcing an error. At most, the low
;    0411  1      !       bit of R0 will be changed.
;    0412  1      !
;    0413  1      ! FORMAL PARAMETERS:
;    0414  1      !
;    0415  1      !       Register_0    : The general register R0.
;    0416  1      !
;    0417  1      !       Branch_Code   : A literal defining what type of branch is being executed by the diagnostic.
;    0418  1      !
;    0419  1      !       Error_Number  : A diagnostic error number.
;    0420  1      !
;    0421  1      !       Branch_Value  : The value that will determine whether or not the branch should actually be taken.
;    0422  1      !
;    0423  1      ! CALLER(S):
;    0424  1      !
;    0425  1      !       The diagnostic program.
