;    0881  2      !       ! FUNCTIONAL DESCRIPTION:
;    0882  2      !       !
;    0883  2      !       !       This routine adds one record to the linked list of forced-error records. It also fills in the
;    0884  2      !       !       fields of the new record. The Error_Count is assumed to be one. The Test and Subtest numbers
;    0885  2      !       !       are taken from the DSA area. This assumes that the forced-error is being added as they occur
;    0886  2      !       !       (i.e., there is no change in the test/subtest numbers from the time the error is forced to the
;    0887  2      !       !       time it is added).
;    0888  2      !       !
;    0889  2      !       ! CALLER (S):
;    0890  2      !       !

;    1618  1      GLOBAL ROUTINE QA$Main (Hook_Point) : NOVALUE =
;    1619  1
;    1620  1      !++
;    1621  1      ! FUNCTIONAL DESCRIPTION:
;    1622  1      !
;    1623  1      !       This global routine is called from different points in the Supervisor and from the DSX$Branch
;    1624  1      !       routine. It decides, based on the QA$AOB_Check_State bit vector, which check is currently being
;    1625  1      !       executed. If a check routine returns with an unsuccessful return, this will call the QA$Dump
;    1626  1      !       routine and then halt. If the diagnostic was not run with the /QA qualifier, do nothing.
;    1627  1      !

0000    38 ; ABSTRACT:
0000    39 ;
0000    40 ; ENVIRONMENT:
0000    41 ;
0000    42 ; AUTHOR:       KEN CHAPMAN     10-NOV-77       VERSION 01.
0000    43 ; MODIFIED BY:
0000    44 ;                N. HOWGATE      20-FEB-78       VERSION 02 (ESSAA-4.00).
0000    45 ;       01       QIO SUPPORT
0000    46 ;                TOM SOUTTER     22-FEB-78
0000    47 ;       02       ADDED CALL TO VMS/QIO HANDLER
0000    48 ;                R. RIGGS        1-OCT-78        VERSION 3 (ESSAA-5.00)
0000    49 ;       03       INCLUDED QIO DATABASE INITIALIZATION ROUTINES
0000    50 ;                N.Howgate       26-Jun-79       Version 4 (ESSAA-5.01)
0000    51 ;       04       Add support for 11/750
0000    52 ;                Roger Riggs     03-NOV-1979
0000    53 ;       05       Added code to load drivers if not found in
0000    54 ;                IOC$GL_DPTLIST
0000    55 ;       06       Added fudge to generate 2 vectors for LPA11K
0000    56 ;                Roger Riggs, 5-Feb-1980, Version 5.2
0000    57 ;       07       Revamped setup of ACF block, Added code to maintain reference
```

```
0000     58 ;                 count in DPT headers, added code to handle headers on drivers
0000     59 ;                 header contains the number of vectors for unibus  devices
0000     60 ;                 Removes need for fudge in edit 06.
0000     61 ;--
0000     62 ;
0000     63 ;         08      John Ciukaj     5-May-80        Version 5.4
0000     64 ;
0000     65 ;                   Added Dummy return for QIO related calls
0000     66 ;
0000     67 ;                 Dave Butenhof   18-jun-1980,    version 5.5
0000     68 ;         09      Remove all dummy returns from this module, and move to
0000     69 ;                 new module VMSDUMMY.
0000     70 ;                 Roger Riggs, 10-Aug-1980
0000     71 ;         10      Use QIO driver prefix from controller instead of device
0000     72 ;                 this allows for terminals to be connected to more than
0000     73 ;                 one type of Async controller.  The first prefix
0000     74 ;                 encountered while linking back through the P-tables is
0000     75 ;                 used.
0000     76 ;
0000     77 ;         11      - Jack Stansbury, 22-Oct-1981, Version 6.-
0000     78 ;                 Fixed truncation errors. Also added .LIBRARY statements
0000     79 ;                 for $DS and $DIAG. Also changed .PSECT SEP to WORK, CODE,
0000     80 ;                 and DATA where appropriate.
0000     81 ;
0000     82 ;         12      - Jack Stansbury, 12-Nov-1981, Version 6.-
0000     83 ;                 Changed the HALTD to HALT.
0000     84 ;
0000     85 ;         13      Marion Baggett, 9-Apr-1982, Version 6.7
0000     86 ;                 Added .NoShow Conditionals after .IDENT statement.
0000     87 ;
0000     88 ;         14      Jack Stansbury, July 1, 1982, Version 6.8
0000     89 ;                 Added the 'real' Exe$PwrTimChk routine.
0000     90 ;
0000     91 ;         15      Marion Baggett, 24-Sept-1982, Version 6.9
0000     92 ;                 Changed the CASE instruction since WRITEVBLK and READVBLK
0000     93 ;                 are to far away and a JMP was need.
0000     94 ;
0000     95 ;         16      Richard E. Muse, 9 January, 1984, Version 6.14
0000     96 ;                 Added $PRDEF macro definition - VMS Version 4 change.
0000     97 ;
0000     98 ;         17      Domenic Andella, 9-Apr-1984, Version 6.14
0000     99 ;                 Added code in FILL_ACF to handle case where
0000    100 ;                 an SBIA is attached, and it is necessary to
0000    101 ;                 'backtrack' another level.
0000    102 ;
0000    103 ;         18      Bob Bergazzi    24-Apr-1984     Version 7.0
0000    104 ;                         - Changed FILL_ACF to set up R3 with the CSR
0000    105 ;                           address for the subsequent call to FIND_ADP.
0000    106 ;                         - Changed FIND_ADP routine to compare ADP$L_CSR
0000    107 ;                           instead of ADP$W_TR. This accomodates the VENUS
0000    108 ;                           cpu with multiple SBIs.
0000    109 ;                         - Changed INI_DRADP to add 100 or 300 to SCB_BASE
0000    110 ;                           depending on which SBI the adapter is connected to.
0000    111 ;                         - Removed UBINT... code from INI_UBADP since it
0000    112 ;                           only needs the size of that code (UBINTSZ), which
0000    113 ;                           is defined in ONLY8600.
0000    114 ;
```

```
0000    115 ;       19      Ron Parker      1-NOV-1984
0000    116 ;                       - Fixed truncation errors
0000    117 ;
0000    118 ;       20      Bob Bergazzi    Nov. 26, 1984   Version 8.0
0000    119 ;               Added DWBUA to list of known adapter types.
0000    120 ;
0000    121 ;       21      Ted Salem       Feb. 6, 1985    Version 8.1
0000    122 ;               Added code to in order to read and write
0000    123 ;               accross the NI.
0000    124 ;
0000    125 ;       22      Ted Salem       March 19, 1985  Version 8.2
0000    126 ;               Changed EXE$QIO to do a proper return to MP$INTERLOCK.
0000    127 ;
0000    128 ;       24      R.E.Muse        17 June 1985
0000    129 ;               added code to read the nautilus TODR register
0000    130 ;
0000    131 ;       25      J. Baranski     28-Jan-1986
0000    132 ;               Added .EXTERN DS$GK_SID to fix undefined DS$GK_SID.
0000    133 ;                                                                   ;G:2
0000    134 ;       26      Ted Salem       15-May-1986                         ;G:2
0000    135 ;               Made change #18 to be defined as weak               ;G:2
0000    136 ;                                                                   ;G:4
0000    137 ;       27      Richard E. Muse 28-May-1986                         ;G:4
0000    138 ;               fixed call to ds$load. use dummy buf addr to fool   ;G:4
0000    139 ;               error checking in ds$load so we can get file size.  ;G:4
0000    140 ;                                                                   ;G:6
0000    141 ;       28      Ingrid Martin   13-Mar-1987                         ;G:6
0000    142 ;               Added code so that RRR can read the TODR the same   ;G:7
0000    143 ;               way as Nautilus.                                    ;G:6

0259    670          .SBTTL  QIO$ADDUNIT     Add a unit to the QIO database
0259    671 ;++
0259    672 ; FUNCTIONAL DESCRIPTION:
0259    673 ;
0259    674 ;       This routine takes all the necessary steps to
0259    675 ;       insert a unit into the QIO database, including adding
0259    676 ;       ADP's, CRB's, IDB's, DDB's and UCB's.
0259    677 ;       The generic name of the device is used to locate the
0259    678 ;       device driver for the device.  Starting with the specified
0259    679 ;       device fields are copied from the P-table to the ACF block
0259    680 ;       which contains all the information necessary to build the
0259    681 ;       QIO database.  For unknown devices the unit and vector information
0259    682 ;       is copied. For a TM03 the unit is copied to only one of two fields.
0259    683 ;       For channels, (DR780, RH780 & DW780) the configuration register is set
0259    684 ;       and the ACF is complete. For all non-channel devices this process
0259    685 ;       is repeated for the link device, and then for it's link device...etc.
0259    686 ;       Note that it is impossible to catch the case where the TM03 is
0259    687 ;       omitted from the link chain for a magtape drive... i.e. no
0259    688 ;       error is reported.  Errors are reported if the channel is omitted.

Performance indicators

Phase	Page faults	CPU Time	Elapsed Time
Initialization	22	00:00:00.02	00:00:00.24
Command processing	882	00:00:00.19	00:00:00.64
Pass 1	1740	00:00:06.49	00:00:09.93
Symbol table sort	8	00:00:00.50	00:00:00.49
Pass 2	622	00:00:01.72	00:00:03.65
Symbol table output	2	00:00:00.11	00:00:00.35
Psect synopsis output	2	00:00:00.01	00:00:00.01
Cross-reference output	69	00:00:00.79	00:00:01.29
Assembler run totals	3348	00:00:09.83	00:00:16.60

The working set limit was 3400 pages.
348441 bytes (681 pages) of virtual memory were used to buffer the intermediate code.
There were 90 pages of symbol table space allocated to hold 1693 non-local and 119 local symbols.
1786 source lines were read in Pass 1, producing 126 object records in Pass 2.
225 pages of virtual memory were used to define 60 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	25
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	6
SYS$COMMON:[SYSLIB]LIB.MLB;2	5
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	0
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	0
SYS$COMMON:[SYSLIB]LIB.MLB;2	0
SYS$COMMON:[SYSLIB]STARLET.MLB;2	14
TOTALS (all libraries)	50

2035 GETS were required to define 50 macros.

There were no errors, warnings or information messages.

Psect synopsis output	2	00:00:00.01	00:00:00.01
Cross-reference output	6	00:00:00.11	00:00:00.22
Assembler run totals	1751	00:00:04.55	00:00:07.72

The working set limit was 2900 pages.
166703 bytes (326 pages) of virtual memory were used to buffer the intermediate code.
There were 70 pages of symbol table space allocated to hold 1171 non-local and 26 local symbols.
743 source lines were read in Pass 1, producing 76 object records in Pass 2.

57 pages of virtual memory were used to define 20 macros.

+----------------------------+
! Macro library statistics !
+----------------------------+

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	6
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	0
SYS$COMMON:[SYSLIB]LIB.MLB;2	3
SYS$COMMON:[SYSLIB]STARLET.MLB;2	7
TOTALS (all libraries)	16

1437 GETS were required to define 16 macros.

There were no errors, warnings or information messages.

0007   138 ;*
0007   139 ; EXE$QIOREQ - QUEUE I/O REQUEST
0007   140 ;
0007   141 ; THIS SERVICE PROVIDES THE CAPABILITY TO INITIATE AN I/O OPERATION
0007   142 ; BY QUEUEING A REQUEST TO A DEVICE'S ASSOCIATED DRIVER.  ONCE THE
0007   143 ; OPERATION HAS BEEN INITIATED, CONTROL WILL RETURN TO THE CALLER
0007   144 ; WHO CAN SYNCHRONIZE I/O COMPLETION IN ONE OF THREE WAYS:
0007   145 ;
0007   146 ;       1) SPECIFY THE ADDRESS OF AN AST ROUTINE THAT WILL BE
0007   147 ;          EXECUTED WHEN THE I/O COMPLETES.
0007   148 ;
0007   149 ;       2) WAIT FOR THE SPECIFIED EVENT FLAG TO BE SET.
0007   150 ;
0007   151 ;       3) POLL THE SPECIFIED I/O STATUS BLOCK FOR A COMPLETION
0007   152 ;          STATUS.
0007   153 ;
0007   154 ; THIS ROUTINE VERIFYS THE FUNCTION INDEPENDENT PARAMETERS, ALLOCATES
0007   155 ; AN I/O REQUEST PACKET, COPIES THE FUNCTION INDEPENDENT PARAMETERS AND
0007   156 ; PROCESS INFORMATION TO THE I/O PACKET, CHECKS ACCESS TO THE DEVICE,
0007   157 ; AND CALLS THE DRIVER'S FUNCTION DECISION TABLE ROUTINE(S) THAT CORRESPOND
0007   158 ; TO THE SPECIFIED FUNCTION.  IT IS THEN UP TO THE FDT ROUTINE TO EITHER
0007   159 ; COMPLETE THE REQUEST IMMEDIATELY (EXE$ABORTIO OR EXE$FINISHIO) OR TO
0007   160 ; QUEUE THE I/O REQUEST FOR FURTHER PROCESSING BY THE DRIVER'S STARTIO

Performance indicators

Phase	Page faults	CPU Time	Elapsed Time
Initialization	22	00:00:00.03	00:00:00.19
Command processing	890	00:00:00.24	00:00:00.77
Pass 1	973	00:00:03.55	00:00:05.43
Symbol table sort	0	00:00:00.28	00:00:00.28
Pass 2	56	00:00:00.97	00:00:01.97
Symbol table output	2	00:00:00.05	00:00:00.25
Psect synopsis output	2	00:00:00.00	00:00:00.00
Cross-reference output	6	00:00:00.15	00:00:00.24
Assembler run totals	1953	00:00:05.28	00:00:09.14

The working set limit was 2900 pages.

220656 bytes (431 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1072 non-local and 26 local symbols.
595 source lines were read in Pass 1, producing 72 object records in Pass 2.
141 pages of virtual memory were used to define 36 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	11
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	2
SYS$COMMON:[SYSLIB]LIB.MLB;2	10
SYS$COMMON:[SYSLIB]STARLET.MLB;2	9
TOTALS (all libraries)	32

1549 GETS were required to define 32 macros.

There were no errors, warnings or information messages.

Assembler run totals	1518	00:00:02.25	00:00:04.36

The working set limit was 2400 pages.
82358 bytes (161 pages) of virtual memory were used to buffer the intermediate code.
There were 20 pages of symbol table space allocated to hold 317 non-local and 23 local symbols.
272 source lines were read in Pass 1, producing 30 object records in Pass 2.
70 pages of virtual memory were used to define 17 macros.

Macro library statistics

Macro library name	Macros defined

;    0116  0      !       18      M. Baggett      1-March-1983    Version 6.11
;    0117  0      !               Added LESI,RCF25 and support for booting CI-HSC50.
;    0118  0      !
;    0119  0      !       19      M. Baggett      17-May-1983     Version 6.11
;    0120  0      !               Added changes to support CI-HSC50 port station #.
;    0121  0      !       20      M. Baggett      22-Sep-1983     Version 6.13
;    0122  0      !               Changed name LESI to RC11
;    0123  0      !
;    0124  0      !       21      M. Baggett      11-Oct-1983     Version 6.13
;    0125  0      !               Added support for CI-HSC50 tape and TS05
;    0126  0      !
;    0127  0      !       22      Domenic Andella 1-Mar-1984      Version 6.13
;    0128  0      !               Added code in routines DSX$CHECK_SUPPORT and
;    0129  0      !               RMS$OPEN for 8600 CPU. Each routine uses code
;    0130  0      !               to 'backtrack' through ptables till _LINK field
;    0131  0      !               equals zero, when this occurs the present Ptable
;    0132  0      !               is linked to HUB. Not so for a VENUS, when ptable
;    0133  0      !               _LINK field equals zero it means were linked to
;    0134  0      !               to an SBIA since the HUB is ABUS.  Therfore the
;    0135  0      !               modifications have to do with saving and reloading
;    0136  0      !               the previous adapter and controller address if running on a VENUS.
;    0137  0      !
;    0138  0      !       23      Bob Bergazzi    April 13, 1984  Version 7.0
;    0139  0      !               Changed DSX$Check_support to support ODS format on
;    0140  0      !               the console storage device for the ZZZ cpu.
;    0141  0      !
;    0142  0      !       24      M. Baggett      28-aug-1984     Version 7.1
;    0143  0      !               Changed controller for RC25/RCF25 from RC11 to LESI
;    0144  0      !               so devices could be accessed.
;    0145  0      !
;    0146  0      !       25      M. Baggett      5-Oct-1984      Version 7.1
;    0147  0      !               Change TAPE in support_table to allow operaton on HSC50 tape.
;    0148  0      !
;    0149  0      !       26      Bob Bergazzi    Oct. 18,1984    Version 7.1
;    0150  0      !               Added recognition of DWBUA in the DSX$CHECK_SUPPORT routine.
;    0151  0      !
;    0152  0      !       27      M. Baggett      18-Oct-1984     Version 7.1
;    0153  0      !               Add changes for HSC50 port for magtape operation.
;    0154  0      !
;    0155  0      !       28      M. BAGGETT      2-NOV-1984      VERSION 7.1
;    0156  0      !               Support TK50.  Change TU81 to have init flag.
;    0157  0      !               Change order of clearing init flag for all applicable
;    0158  0      !               devices so a CLI command will only clear it once per command.

                     0000     76 ;          16      Made SETIPL change mode to KERNEL before setting the IPL
                     0000     77 ;                  Roger Riggs, 26-Jan-1980, Version 5.2
                     0000     78 ;          17      Set supervisor vector for software IPL interrupts on
                     0000     79 ;                  levels 6,9,10,11, to dispatch to EXE$FORKDSPTH
                     0000     80 ;                  John Ciukaj, 5-feb-80.    Version 5.2
                     0000     81 ;          18      Delete 'MOVAB   IS(R3),(R2)' causing exception while
                     0000     82 ;                  running diagnostic ECKAX, Exception depended on value
                     0000     83 ;                  of R2 on entry to DS$INITSCB
                     0000     84 ;                  Roger Riggs, 21-Mar-1980
                     0000     85 ;          19      Added EXE$GL_SCB to hold address of current SCB.
                     0000     86 ;                  Roger Riggs, 18-SEP-1980, Version 6.0
                     0000     87 ;          20      Added code to DS$INITSCB to restart the clock
                     0000     88 ;                  Dave Butenhof, 18-feb-1981, version 6.3
                     0000     89 ;          21      Also allow SETVEC w/out changing address
                     0000     90 ;          22      Fix several truncation errors
                     0000     91 ;
                     0000     92 ;          23      - Jack Stansbury, 22-Oct-1981, Version 6.5
                     0000     93 ;                  Fixed several truncation errors. Changed SEP Psects to
                     0000     94 ;                  what they should be. Added .LIBRARY statements for
                     0000     95 ;                  $DS and $DIAG.
                     0000     96 ;
                     0000     97 ;          24      Jack Stansbury, 15-September-1982, Version 6.9
                     0000     98 ;                  Added code in the SetVec routine that will take care of a race
                     0000     99 ;                  condition with the interval clock interrupts and an MTPR
                     0000    100 ;                  instruction that turns off the clock. Also changed the ICCS$M_ERR
                     0000    101 ;                  to be bit 15, instead of bit 31.
                     0000    102 ;
                     0000    103 ;          25      Jack Stansbury, 16-September-1982, Version 6.9
                     0000    104 ;                  Changed the ICCS$M_Err bit back to 31. The VAX Hardware Handbook
                     0000    105 ;                  has a picture of the ICCS longword in the back of the book. This
                     0000    106 ;                  picture states that the ERR bit is bit 15. However, in other
                     0000    107 ;                  sections of the book (and in the SRM), the ERR bit is 15. The
                     0000    108 ;                  NEBULA hardware thinks it is 15 also.
                     0000    109 ;
                     0000    110 ;          26      Bob Bergazzi    21-Oct-1982     version 6.9
                     0000    111 ;                  Changed comments in DSX$SETVEC routine. Also see CLOCK.MAR [25]
                     0000    112 ;
                     0000    113 ;          27      Bob Bergazzi    April 26, 1983  Version 6.11
                     0000    114 ;                  Added call to ONLY_SCB in DSX$INITSCB which fixes the SCB for VENUS.

Symbol table sort	0	00:00:00.13	00:00:00.12
Pass 2	36	00:00:00.57	00:00:01.15
Symbol table output	2	00:00:00.05	00:00:00.12
Psect synopsis output	2	00:00:00.02	00:00:00.08
Cross-reference output	7	00:00:00.21	00:00:00.40
Assembler run totals	1541	00:00:03.13	00:00:06.44

The working set limit was 3012 pages.
84505 bytes (166 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 454 non-local and 33 local symbols.
733 source lines were read in Pass 1, producing 55 object records in Pass 2.
63 pages of virtual memory were used to define 19 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	4
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	5
SYS$COMMON:[SYSLIB]LIB.MLB;2	2
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	0
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	0
SYS$COMMON:[SYSLIB]LIB.MLB;2	0
SYS$COMMON:[SYSLIB]STARLET.MLB;2	8
TOTALS (all libraries)	19

455 GETS were required to define 19 macros.

There were no errors, warnings or information messages.

                                        ;       02      changed W^ to "' on DSA$GL_FLAGS references
                                        ;               Roger Riggs, 17-Mar-1980, Version 5.3
                                        ;       03      DS$LOAD returns changed, reflected by getting SS$_NORMAL
                                        ;               Even if file was truncated.
                                        ;               Dave Butenhof   28-apr-80
                                        ;       04      Use $GET and $PUT for input/output if DS run from command file
                                        ;               Roger Riggs, 3-Sep-1980, Version 6.0
                                        ;       05      Modified SCRIPT$OPEN to use RMS instead of load
```

```
                                0000     58 ;
                                0000     59 ;                  Dave Butenhof, 10-sep-1980, Version 6.0
                                0000     60 ;       06         Fix user mode RMS GETLINE code to perform case translation
```

```
0000     62 ;        07      - Jack Stansbury, 22-Oct-1981, Version 6.5
0000     63 ;                Fixed truncation errors. Also added .LIBRARY statements for
0000     64 ;                $DS and $DIAG.
0000     65 ;
0000     66 ;        08      - Dave Butenhof, 12-Nov-1981, version 6.5
0000     67 ;                Implement SET VERIFY/CLEAR VERIFY function.  When cleared,
0000     68 ;                this flag will cause command script input not to be echoed.
0000     69 ;                This is basically for the System Functional Text (EVXBB).
0000     70 ;                                                                        ;G:9
0000     71 ;        09      - Dave Butenhof, 17-Nov-1981, version 6.5
0000     72 ;                Implement type code bytes for all prompts.  The type code
0000     73 ;                will not be used in comparison of script file prompts,
0000     74 ;                but will be typed out to console or log file, if BINARY
0000     75 ;                flag is set.
0000     76 ;
0000     77 ;        10      -Jack Stansbury, 18-Dec-1981, Version 6.6
0000     78 ;                Added a little code in SCRIPT$FLUSH that will clear out the
0000     79 ;                QA bit in the DSA flags. This is to insure that QA gets turned
0000     80 ;                off when a Control-C interrupts a diagnostic in a script file,
0000     81 ;                and a non-continuable command (i.e., one that causes the script
0000     82 ;                file to be flushed) is issued. Before, if a START command was
0000     83 ;                issued, and a Control-C was typed, and a subsequent START
0000     84 ;                command was typed, the second one could be screwed up.
0000     85 ;
0000     86 ;        11      -Jack Stansbury, 26-Feb-1982, Version 6.6
0000     87 ;                Added comments to the DS_GETLINE routine to aid in
0000     88 ;                deciphering it.
0000     89 ;
0000     90 ;        12      - Jack Stansbury, 18-Mar-1982, Version 6.?
0000     91 ;                Took out any reference to the TypMsg routine. This is so
0000     92 ;                that type-coding can be added. Also added some new DS macros
0000     93 ;                that should make this more understandable.
0000     94 ;
0000     95 ;        13      Marion Baggett, 31-Mar-1982, Version 6.7
0000     96 ;                Added SYS$LIBRARY:LIB/
0000     97 ;
0000     98 ;        14      Marion Baggett, 8-Apr-1982, Version 6.7
0000     99 ;                Added type coding.
0000    100 ;
0000    101 ;        15      Jack Stansbury, 12-Apr-1982, Version 6.7
0000    102 ;                Added support for the Customer Runnable Diagnostics package.
0000    103 ;
0000    104 ;        16      John Ciukaj,    4-Apr-1983,     version 6.11
0000    105 ;                - Redefined reference to CRD bits in DSA Flags to
0000    106 ;                  distinguish between online and offline
0000    107 ;
0000    108 ;        17      Peter Green,    20-Jul-1983,    version 6.12
0000    109 ;                Added code to support scripting where prompts are
0000    110 ;                printed to the terminal and an answer is given by
0000    111 ;                the user. This is only done when the script prompt
0000    112 ;                ends with  \\'.
0000    113 ;
0000    114 ;        18      M. Baggett      25-Jan-1984     Version 6.14
0000    115 ;                Changed dynamic allocation of XAB, FAB, RAB to static form
0000    116 ;                so script files will work.
0000    117 ;
0000    118 ;        19      M. Baggett      8-Feb_1985      Version 8.1
```

```
0000   119 ;               Changed COPY_IT to not change apha characters to uppers
0000   120 ;               case if ULTRIX.
0000   121 ;
0000   122 ;       20      Ted Salem       March 22, 1985  Version 8.2
0000   123 ;               Added interlock code to DS_GETLINE.
0000   124 ;
0000   125 ;       21      M. Baggett      20-June-1985    Version 8.3
0000   126 ;               Change some ULTRIX names.
0000   127 ;
0000   128 ;       22      Amy Iorio       10-July-1985    Version 8.3
0000   129 ;               Put ASK> prompt in for $DSASKxxx macros.
0000   130 ;
0000   131 ;       23      Domenic Andella 25-Sept-1985    Version 9.0
0000   132 ;               Fixed two truncation errors, BSBW's to JSB's
0000   133 ;                                                                       ;G:5
0000   134 ;       24      I. Martin       23-June-1986    Version 10.2            ;G:5
0000   135 ;               Changed literal to symbolic string.                     ;G:3
0000   136 ;                                                                       ;G:7
0000   137 ;       25      Bob Bergazzi    9-Oct-1986      Version 10.4            ;G:7
0000   138 ;               Fixed previous edit.                                    ;G:7
0000   139 ;                                                                       ;G:8
0000   140 ;       26      Ingrid Martin   1-Apr-1987      Version 10.8            ;G:9
0000   141 ;               RRR updates (do like nautilus).                         ;G:8
0000   142 ;                                                                       ;G:9
0000   143 ;       27      Bob Bergazzi    15-apr-1987     Version 10.8            ;G:9
0000   144 ;               Removed extra JSB to CLK$RE_INIT because it is already called ;G:9
0000   145 ;               once in the preceding $DS_CLRVEC on the timer vector.  No     ;G:9
0000   146 ;               symptom observed.                                       ;G:9
0000   147 ;--

Assembler run totals	2075	00:00:06.01	00:00:12.11

```
The working set limit was 3400 pages.
204011 bytes (399 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1060 non-local and 60 local symbols.
1188 source lines were read in Pass 1, producing 80 object records in Pass 2.
144 pages of virtual memory were used to define 56 macros.
```

Macro library statistics

                        0000     80 ;                    ENV$_SUPER, in DIAG. Updated when supervisor interface
                        0000     81 ;                    changes REQUIRE diagnostic changes.
                        0000     82 ;                    Roger Riggs     4-Sept-1979
                        0000     83 ;            17      Removed check of APT flag during start command
                        0000     84 ;                    Roger Riggs, 14-Feb-1980, Vervsion 5.2
                        0000     85 ;            18      Changed so program will not be started if QIO initialization
                        0000     86 ;                    fails, QIO has already printed the error message.
                        0000     87 ;                    Roger Riggs, 12-Mar-1980, Version 5.3
                        0000     88 ;            19      In VRABORT or DSX$ABORT change mode back to kernel before
                        0000     89 ;                    doing cleanup but after the abort message is printed
                        0000     90 ;                    Roger Riggs, 5-Jun-1980, Version 5.4
                        0000     91 ;
                        0000     92 ;            20      Added code to change mode and stack back to kernel
                        0000     93 ;                    before calling cleanup as a result of start.
                        0000     94
```

```
0000     95 ;        21      - dave butenhof, 09-Sep-1981, version 6.-
0000     96 ;                It is desirable, under APT, and if program error had
0000     97 ;                occured, to have ABORT leave machine state intact, for
0000     98 ;                purposes of isolating error.  Add special code to skip
0000     99 ;                INIT_CONTEXT and CLEANUP calls if in APT mode and error
0000    100 ;                flag set.
0000    101 ;
0000    102 ;        22      - Marion Baggett 80-oct-1981 Version 6.-
0000    103 ;                Added new entry point to support command SHOW SUPPORT
0000    104 ;
0000    105 ;        23      - Jack Stansbury, 21-Oct-1981, Version 6.-
```

```
0000   106 ;               Added calls to QA$MAIN for the QA enhancement.
0000   107 ;               Also added .LIBRARY statements for $DS and $DIAG.
0000   108 ;
0000   109 ;       24      - Jack Stansbury, 22-Oct-1981, Version 6.-
0000   110 ;               Fixed truncation errors.
0000   111 ;
0000   112 ;       25      - Jack Stansbury, 26-Oct-1981, Version 6.-
0000   113 ;               Changed most of the error messages to mixed case
0000   114 ;               (as per government affirmative action regulations)!
0000   115 ;
0000   116 ;       26      - Dave Butenhof, 19-Nov-1981, version 6.-
0000   117 ;               Add type codes to printouts
0000   118 ;
0000   119 ;       27      - Jack Stansbury, 16-Nov-1981, Version 6.5
0000   120 ;               Added the VRSHOWSECTIONS routine.
0000   121 ;
0000   122 ;       28      - Jack Stansbury, 21-Nov-1981, Version 6.5
0000   123 ;               Commented out three of the calls to QA_MAIN because it
0000   124 ;               appears they will not be needed for the 6.5 DS version.
0000   125 ;
0000   126 ;       29      - Jack Stansbury, 5-Jan-1982, Version 6.6
0000   127 ;               Added comments to the START routine in preparation for the
0000   128 ;               version 30 changes. Also took out the commented-out calls
0000   129 ;               to QA_MAIN since I will not be needing them.
0000   130 ;
0000   131 ;       30      - Jack Stansbury, 6-Jan-1982, Version 6.6
0000   132 ;               Added code and moved other code around in the START routine so
0000   133 ;               as to facilitate the "QA Start Loop".
0000   134 ;
0000   135 ;       31      - Jack Stansbury, 15-Jan-1982, Version 6.6
0000   136 ;               Changed the FMT_PROC header line so that it would print the
0000   137 ;               number of tests on the first line. Only the time appears on the
0000   138 ;               second line. This is in keeping with the EndPass message and
0000   139 ;               the End-Of-Looping message (in EndSub).
0000   140 ;
0000   141 ;       32      - Jack Stansbury, 20-Jan-1982, Version 6.6
0000   142 ;               Added code to not print the header line if the QA Loop on
0000   143 ;               Subtest check was executing and if a flag bit had been cleared.
0000   144 ;               This prevents the header line from being output once for every
0000   145 ;               subtest in the diagnostic when the Loop on Subtest check
0000   146 ;               routine is executing.
0000   147 ;
0000   148 ;       33      Marion Baggett, 9-Apr-1982, Version 6.7
0000   149 ;               Added .NoShow Conditionals after .IDENT , ordered .LIBRARY
0000   150 ;               statements. Change DS$PRINTF statement to use type codes
0000   151 ;
0000   152 ;       34      Richard Brown, 30-June-82, Version 6.8
0000   153 ;               Addition of call to MAP_DEBUGGER so repeated STARTs will
0000   154 ;               not wipe out the debugger once it has been loaded.
0000   155 ;               Also, addition of loading debugger before diagnostic is
0000   156 ;               started, if proper flag is set.
0000   157 ;
0000   158 ;       35      Marion Baggett, 24-Sept-82  Version 6.9
0000   159 ;               Fixed truncation error.
0000   160 ;
0000   161 ;       36      Bob Bergazzi    2-Nov-1982      Version 6.9
0000   162 ;               Changed VRSTART so that if we are loaded under APT do not
```

```
                                0000   163 ;               check the DSA$V_LOAD_DEBUGGER flag. APT sets this flag for
                                0000   164 ;               reasons long since lost. When running under APT, every
                                0000   165 ;               START would cause the supervisor to try and load the debugger
                                0000   166 ;               from the console device and cause APT to timeout.
                                0000   167 ;
                                0000   168 ;       37      Jack Stansbury, 8-Mar-1983, Version 6.11
                                0000   169 ;               Changed the abort routines to make sure they print the true
                                0000   170 ;               (if there is one) user PC.
                                0000   171 ;
                                0000   172 ;       38      John Ciukaj     3-May-1983      Version 6.11
                                0000   173 ;               - Alter Start routine so that an error does not occur
                                0000   174 ;                 when an ambiguous section name is found AND the section name
                                0000   175 ;                 is equivalent to the name entered.
                                0000   176 ;
                                0000   177 ;       39      Bob Bergazzi    May 16, 1983    Version 6.11
                                0000   178 ;               Changed the order of the .LIB statements.
                                0000   179 ;
                                0000   180 ;       40      Bob Bergazzi    Sep 21, 1983    Version 6.13
                                0000   181 ;               Added BIN_TIME quadword in PSECT WORK for START/TIME switch.
                                0000   182 ;               Just before call to DISPATCH, do a $SETIMR if /TIME was given.
                                0000   183 ;               Commented out for version 6.13 and 6.14, and 7.0
                                0000   184 ;
                                0000   185 ;       41      Bob Bergazzi    Jan. 26, 1984   Version 6.14
                                0000   186 ;               Fixed ABORT so it won't print out VMS system addresses as the
                                0000   187 ;               user PC.
                                0000   188 ;
                                0000   189 ;       42      Ted Salem       Aug. 3, 1984    Version 7.10
                                0000   190 ;               Added SHOW TESTS command.
                                0000   191 ;
                                0000   192 ;       43      Bob Bergazzi    Feb. 26, 1985   Version 8.1
                                0000   193 ;               Fixed edit [40] (/TIME).
                                0000   194 ;
                                0000   195 ;       44      Bob Bergazzi    Mar. 4, 1985    Version 8.1
                                0000   196 ;               Commented out edit 43.
                                0000   197 ;
                                0000   198 ;       45      Amy Iorio       June 17, 1985   Version 8.3
                                0000   199 ;               clear externals for Printrev
                                0000   200 ;
                                0000   201 ;       46      Ted Salem       Oct. 15, 1985   Version 9.0
                                0000   202 ;               Do above (#45) properly by clearing
                                0000   203 ;               entire date structure.
                                0000   204 ;
                                0000   205 ;       47      J. Baranski      1-Nov-1985     Version 9.1
                                0000   206 ;               Un Comment Out START/TIME.
                                0000   207 ;
                                0000   208 ;       48      M. Baggett      14-Jan-1986     Version 9.1
                                0000   209 ;               Stop truncating long device name when starting program
                                0000   210 ;                                                                       ;G:2
                                0000   211 ;       49      Domenic Andella 7-Feb-86        Version 10.0            ;G:2
                                0000   212 ;               For every start or run sequence in an mp system, the    ;G:2
                                0000   213 ;               primary processor should clear its own interlocking     ;G:2
                                0000   214 ;               data structures, therefore add jsb to MP$_CLEAR_LOCKS   ;G:2
                                0000   215 ;               in routine VRSTART. In addition, clear MP$GR_BOOTED_PROCESSORS, ;G:2
                                0000   216 ;               MP$GR_IDLING_PROCESSORS, MP$GL_FLAGS, and MP$GL_CONDITION_FLAGS. ;G:
                                0000   217 ;                                                                       ;G:2
                                0000   218 ;       50      M. Baggett      26-Mar-1986     Version 10              ;G:5
                                0000   219 ;               Separate device names in list printed after starting test   ;G:5
```

```
0000   220 ;                    with tabs.                                          ;G:5
0000   221 ;                                                                        ;G:5
0000   222 ;          51        M. Baggett      31-Mar-1986     Version 10          ;G:6
0000   223 ;                    Fixed so diagnostics run offline.                   ;G:6
0000   224 ;                                                                        ;G:6
0000   225 ;          52        Bob Bergazzi    16-May-1986     Version 10.1        ;G:7
0000   226 ;                    Added /TIME changes.                                ;G:7
0000   227 ;                                                                        ;G:8

Assembler run totals	2028	00:00:05.48	00:00:09.78

The working set limit was 2900 pages.
202995 bytes (397 pages) of virtual memory were used to buffer the intermediate code.

There were 40 pages of symbol table space allocated to hold 645 non-local and 59 local symbols.
1109 source lines were read in Pass 1, producing 64 object records in Pass 2.
118 pages of virtual memory were used to define 31 macros.

0000    318 ; Functional description:
0000    319 ;
0000    320 ;       This routine performs basic magnetic tape positioning.
0000    321 ;       functions are supported for read, rewind, skip files (forward
0000    322 ;       backward) and skip records (forward and backward). It also
0000    323 ;       support drive clear.  Drive clear must be called before the first
0000    324 ;       tape operation as it is necessary to initialize the tape subsystem
0000    325 ;       prior to the first position or transfer operation.
0000    326 ;       Drive clear initialization clears the Need Buffer Address (NBA)
0000    327 ;       bit in the drive. This bit can be reset by a UNIBUS reset/init
0000    328 ;       which in the TS11 causes the tape to be rewound. If NBA is set
0000    329 ;       the function is rejected with tape position lost.
0000    330 ;
0000    331 ; Inputs:
0000    332 ;
0000    333 ;       R3      - base address of adapter's register space
0000    334 ;       R5      - LBN for current piece of transfer
0000    335 ;       R6      - contains 0
0000    336 ;       R7      - Address of devices CSR
0000    337 ;       R8      - size of transfer in bytes
0000    338 ;       R9      - address of the RPB
0000    339 ;       R10     - starting address of transfer (byte offset in first
0000    340 ;                 page ORed with starting map register number)
0000    341 ;
0000    342 ;       FUNC(AP)- I/O operation (IO$_READLBLK or IO$_REWIND only)
0000    343 ;       MODE(AP)- Address interpretation mode (0 = physical, 1 = virtual)
0000    344 ;       SIZE(AP)- Size of buffer in bytes
0000    345 ;       BUF(AP) - Address of buffer
0000    346 ;
0000    347 ; Implicit inputs:
0000    348 ;
0000    349 ;       RPB$B_SLAVE     - Slave number of drive
0000    350 ;       RPB$W_UNIT      - RPB field containing boot device unit number
0000    351 ;
0000    352 ;
0000    353 ; Outputs:
0000    354 ;
0000    355 ;       R0 - status code
0000    356 ;
0000    357 ;               SS$_NORMAL      - successful transfer
0000    358 ;               SS$_TAPEPOSLOST - Tape position lost
0000    359 ;               SS$_TIMEOUT     - Device timeout
0000    360 ;               SS$_DATAOVERUN  - Record too long
0000    361 ;               SS$_ILLIOFUNC   - Illegal I/O function
0000    362 ;               SS$_CTRLERR     - Controller error
0000    363 ;               SS$_ENDOFFILE   - Tape mark was read
0000    364 ;               SS$_DEVOFFLINE  - Device is offline
0000    365 ;
0000    366 ;       R1 - Number of bytes transferred during a READ operation
0000    367 ; Register usage:
0000    368 ;
0000    369 ;               R5      - Map number of map for command area
0000    370 ;               R11     - Address of command buffer
0000    371 ;

Performance indicators

Phase	Page faults	CPU Time	Elapsed Time
Initialization	23	00:00:00.01	00:00:00.18
Command processing	882	00:00:00.23	00:00:00.81
Pass 1	624	00:00:02.98	00:00:04.37
Symbol table sort	0	00:00:00.37	00:00:00.36
Pass 2	6	00:00:00.73	00:00:01.45
Symbol table output	0	00:00:00.02	00:00:00.06
Psect synopsis output	0	00:00:00.01	00:00:00.01
Cross-reference output	2	00:00:00.16	00:00:00.38
Assembler run totals	1537	00:00:04.51	00:00:07.62

The working set limit was 2900 pages.
149901 bytes (293 pages) of virtual memory were used to buffer the intermediate code.
There were 70 pages of symbol table space allocated to hold 1303 non-local and 17 local symbols.
606 source lines were read in Pass 1, producing 85 object records in Pass 2.
51 pages of virtual memory were used to define 18 macros.

```
                                    +---------------------------+
                                    ! Macro library statistics !
                                    +---------------------------+

Macro library name                   Macros defined
------------------                   --------------
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5              1

;    0825  1
;    0826  1      !++
;    0827  1      ! Functional description:
;    0828  1      !
;    0829  1      ! Addresses stored in inodes are capable of addressing fragments
;    0830  1      ! of several blocks. File system blocks of at most size MAXBSIZE can
;    0831  1      ! be optionally broken into 2, 4, or 8 pieces, each of which is
;    0832  1      ! addressible; these pieces may be DEV_BSIZE, or some multiple of
;    0833  1      ! a DEV_BSIZE unit.
;    0834  1      !
;    0835  1      ! Large files consist of exclusively large data blocks.  To avoid
;    0836  1      ! undue wasted disk space, the last data block of a small file may be
;    0837  1      ! allocated as only as many fragments of a large block as are
;    0838  1      ! necessary.  The file system format retains only a single pointer
;    0839  1      ! to such a fragment, which is a piece of a single large block that
;    0840  1      ! has been divided.  The size of such a fragment is determinable from
;    0841  1      ! information in the inode.  This field  is filled in when the disk
;    0842  1      ! is created.
;    0843  1      !
;    0844  1      ! The file system shows file size at the fragment level;
;    0845  1      ! to determine number of blocks, aligned fragments are examined.
;    0846  1      !
;    0847  1      ! The root inode is the root of the file system.
;    0848  1      ! Inode 0 can't be used for normal purposes and
;    0849  1      ! historically bad blocks were linked to inode 1,
;    0850  1      ! thus the root inode is 2. (inode 1 is no longer used for
;    0851  1      ! this purpose, however numerous dump tapes make this
;    0852  1      ! assumption, so we are stuck with it).
;    0853  1      !

;    0976  1       !
;    0977  1       ! Look at each inode in directory
;    0978  1       !
;    0979  1       ! A directory consists of some number of blocks of DIRBLKSIZ(currently 255)
;    0980  1       ! bytes, where DIRBLKSIZ is chosen such that it can be transferred
;    0981  1       ! to disk in a single atomic operation (e.g. 512 bytes on most machines).
;    0982  1       !
;    0983  1       ! Each DIRBLKSIZ byte block contains some number of directory entry
;    0984  1       ! structures, which are of variable length.  Each directory entry has
;    0985  1       ! a struct direct at the front of it, containing its inode number,
;    0986  1       ! the length of the entry, and the length of the name contained in
;    0987  1       ! the entry.  These are followed by the name padded to a 4 byte boundary
;    0988  1       ! with null bytes.  All names are guaranteed null terminated.
;    0989  1       ! The maximum length of a name in a directory is MAXNAMLEN.
;    0990  1       !
;    0991  1       !  All DIRBLKSIZ bytes
;    0992  1       ! in a directory block are claimed by the directory entries.  This
;    0993  1       ! usually results in the last entry in a directory having a large
;    0994  1       ! direct$w_d_reclen.   If the first entry of  a directory block is free,
;    0995  1       !  then its direct$l_d_ino is set to 0.  Entries other than the first
;    0996  1       ! in a directory do not normally have direct$l_d_ino set to 0.
;    0997  1       !

The working set limit was 2400 pages.
46032 bytes (90 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 439 non-local and 17 local symbols.
241 source lines were read in Pass 1, producing 40 object records in Pass 2.
14 pages of virtual memory were used to define 8 macros.

```

```
The working set limit was 2012 pages.
1109 bytes (3 pages) of virtual memory were used to buffer the intermediate code.
There were 10 pages of symbol table space allocated to hold 6 non-local and 1 local symbols.
73 source lines were read in Pass 1, producing 13 object records in Pass 2.
0 pages of virtual memory were used to define 0 macros.
```

0007   114 ; FUNCTIONAL DESCRIPTION:
0007   115 ;       Lock and unlock MUTEX database.  Since the Supervisor does not
0007   116 ; implement multi-programming, a "MUTEX"-type lock is implemented via
0007   117 ; disabling AST delivery.
0007   118 ;
0007   119 ; CALLING SEQUENCE:
0007   120 ;       SCH$LOCKW -
0007   121 ;                 JSB     SCH$LOCKW
0007   122 ;       SCH$UNLOCK -
0007   123 ;                 JSB     SCH$UNLOCK
0007   124 ;
0007   125 ; INPUT PARAMETERS:
0007   126 ;       Ignored.  In Supervisor implementation, which MUTEX is targeted for
0007   127 ; lock or unlock is irrelevant, since no data is accessed.
0007   128 ;
0007   129 ; IMPLICIT INPUTS:
0007   130 ;       none
0007   131 ;
0007   132 ; OUTPUT PARAMETERS:
0007   133 ;       none
0007   134 ;
0007   135 ; IMPLICIT OUTPUTS:
0007   136 ;       none
0007   137 ;
0007   138 ; COMPLETION CODES:
0007   139 ;       SS$_NORMAL
0007   140 ;
0007   141 ; SIDE EFFECTS:
0007   142 ;       SCH$LOCKW results in AST delivery for the current mode to be
0007   143 ;       disabled.  SCH$UNLOCK results in AST delivery being re-enabled.
0007   144 ;--

Assembler run totals	1382	00:00:01.44	00:00:02.97

The working set limit was 1900 pages.
40786 bytes (80 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 421 non-local and 1 local symbols.
165 source lines were read in Pass 1, producing 36 object records in Pass 2.
8 pages of virtual memory were used to define 7 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.LIBRARY]DS.MLB;1	0
