                        0000     50 ;       05           DSPR #64 -- CHECK LOAD FLAG FOR SUMMARY COMMAND.
                        0000     51 ;       06           SET EXECUTE FLAG BEFORE CHECKING EXIT TEST STATUS. (KWC)
                        0000     52 ;                    NICK HOWGATE    30-DEC-77       VERSION 05.
                        0000     53 ;       07           DSX$ENDPASS - CHANGE REFERENCE TO DSA$GL_PASSES
                        0000     54 ;                    Roger Riggs     12-Jun-78       VERSION 08
                        0000     55 ;       08           Standardizing primary messages (first pass done/end run)
                        0000     56 ;       09           Check flag DS$V_DONFLG in DS$GL_FLAGS so cleanup is done
                        0000     57 ;                    only once.
                        0000     58 ;       10           Fix to use .ENTRY and .VECTOR in proceedures
                        0000     59 ;                    Roger Riggs     12-Jun-1978
                        0000     60 ;       11           Removed deallocate from cleanup code.
                        0000     61 ;                    Cancel ^O before calling summary  and end pass message
                        0000     62 ;                    Dave Butenhof   15-feb-80
                        0000     63 ;       12           Add hooks for 'ERROR SEARCH' function
                        0000     64 ;                    Roger Riggs,    12-Mar-1980
                        0000     65 ;       13           Added call to INITSCB and reset memory management after cleanup
                        0000     66 ;                    also call QIO$CLEANUP only if program is SEP_FUNCTIONAL
                        0000     67 ;
                        0000     68 ;                    Dave Butenhof   30-jun-1980, version 5.5
                        0000     69 ;       14           Correct word displaced mode to longword displaced
                        0000     70 ;       15           Support DS RMS by calling cleanup routine to avoid
                        0000     71 ;                    cluttering pool space in case of errors
                        0000     72 ;
                        0000     73 ;                    Dave Butenhof, 03-oct-1980, version 6.1
                        0000     74 ;       16           Change some more word-relative references to longword relative
                        0000     75 ;       17           Clear DS$V_CTRLC bit before doing $DS_CNTRLC call; this is to
                        0000     76 ;                    prevent probably undesired control C at next call to KB_CHECK,
                        0000     77 ;                    if control C's were disabled by previous program.
                        0000     78 ;                    Dave Butenhof, 29-dec-1980, version 6.2
                        0000     79 ;       18           More word relative references to longword.  This is getting
                        0000     80 ;                    quite un-fun.
                        0000     81 ;                    Dave Butenhof, 17-feb-1981, version 6.3
                        0000     82 ;       19           More of same.  ALL DSA$?_? references this time.
                        0000     83 ;       20           - dave butenhof, 06-Oct-1981, version 6.5
                        0000     84 ;                    Add SHOW STATUS command
                        0000     85 ;       21           - Dave Butenhof, 02-Nov-1981, version 6.-
                        0000     86 ;                    Fix truncation errors
```

```
0000     88 ;       22      - Jack Stansbury, 03-Nov-1981, Version 6.-
0000     89 ;               Added calls to QA$Main for the QA enhancements. Also fixed
0000     90 ;               some truncation errors. Also changed PSECTs a bit. Added
0000     91 ;               .LIBRARY statements for $DS, $DIAG, and LIB.
0000     92 ;
0000     93 ;       23      - Dave Butenhof, 16-Nov-1981, version 6.5
0000     94 ;               Modified the text (and corrected a bug) in the SHOW STATUS
0000     95 ;               command.
0000     96 ;
0000     97 ;       24      - Dave Butenhof, 19-Nov-1981, version 6.5
0000     98 ;               Modify to use typecodes on all output messages.
0000     99 ;
0000    100 ;       25      - Jack Stansbury, 21-Nov-1981, Version 6.5
0000    101 ;               Commented out several of the calls to QA_MAIN because it
0000    102 ;               appears as though they will not be needed for the 6.5 DS
0000    103 ;               version. Made several other small code changes to the DISPATCH
0000    104 ;               routine for QA.
0000    105 ;
0000    106 ;       26      - Jack Stansbury, 21-Nov-1981, Version 6.5
0000    107 ;               Changed DSX$ENDPASS routine slightly to accomadate QA.
0000    108 ;
0000    109 ;       27      - Jack Stansbury, 16-Dec-1981, Version 6.6
0000    110 ;               Added the DS_QADEFS macro definition.
0000    111 ;
0000    112 ;       28      - Dave Butenhof, 29-Dec-1981, Version 6.6
0000    113 ;               Print out all error counts on Summary command.
0000    114 ;
0000    115 ;       29      - Jack Stansbury, 6-Jan-1982, Version 6.6
0000    116 ;               Changed EndPass routine slightly to accomodate the
0000    117 ;               new way of implementing QA (with the QA Start Loop).
0000    118 ;
0000    119 ;       30      - Dave Butenhof, 12-Jan-1982, Version 6.6
0000    120 ;               Fix EndPass message to avoid losing end of message on
0000    121 ;               narrow screen.
0000    122 ;
0000    123 ;       31      - Jack Stansbury, 15-Jan-1982, Version 6.6
0000    124 ;               Made changes to the Dispatch routine for the Loop on Subtest
0000    125 ;               QA check routine.
0000    126 ;
0000    127 ;       32      - Jack Stansbury, 9-Mar-1982, Version 6.6
0000    128 ;               Inserted some new DS macros that will help these routines
0000    129 ;               be more understandable.
0000    130 ;
0000    131 ;       33      Marion Baggett, 9-Apr-1982, Version 6.7
0000    132 ;               Added NoShow Conditionals after the .IDENT
0000    133 ;
0000    134 ;       34      Dave Butenhof, 20-Apr-1982, Verison 6.7
0000    135 ;               Add kluge code in DS_CLEANUP; if standalone on 730,
0000    136 ;               reset IDC to prevent extra interrupts.
0000    137 ;
0000    138 ;       35      Jack Stansbury, 13-September-1982, Version 6.9
0000    139 ;               Fixed some truncation errors. I didn't mark those that I fixed.
0000    140 ;
0000    141 ;       36      Jack Stansbury, 15-September-1982, Version 6.9
0000    142 ;               Changed the VRSummary and VRShowStatus routines to call the
0000    143 ;               DSR$CheckLoad routine defined in ShowMem.
0000    144 ;
```

```
0000    145 ;       37      Jack Stansbury, 8-Mar-1983, Version 6.11
0000    146 ;               Changed the VRShowStatus routine to look for the user's PC
0000    147 ;               on the stack (in the CLI args).
0000    148 ;
0000    149 ;       38      Amy Iorio, 7-January-1985, Version 8.0
0000    150 ;               Added error message to be reported when subtest requested
0000    151 ;               which is greater than the number of existing subtests.
0000    152 ;
0000    153 ;       39      Amy Iorio, 9-January-1985, Version 8.0
0000    154 ;               Changed FMTLSTPAS in order to print
0000    155 ;               pass counts greater than 100,000 out.
0000    156 ;
0000    157 ;       40      Domenic Andella, 18-Mar-1985, Version 8.2
0000    158 ;               Add call in DS_CLEANUP to MP$_DEALL_MEMORY
0000    159 ;               to check for and deallocate any mp memory.
0000    160 ;
0000    161 ;       41      Amy Iorio, 8-May-1985, Version 8.2
0000    162 ;               Fix to loop-on-subtest.
0000    163 ;
0000    164 ;       42      Domenic Andella, 11-Dec-1985    Version 9.1
0000    165 ;               Add external symbol MP$_DEALL_MEMORY
0000    166 ;
0000    167 ;       43      Bob Bergazzi    16-May-1986     Version 10.1                    ;G:2
0000    168 ;               Cancel /TIME in DS_CLEANUP.                                     ;G:2
0000    169 ;                                                                               ;G:4
0000    170 ;               Daniel Li       19-Oct-1987     Version 10.10                   ;G:4
0000    171 ;               Commented out move subtno inst. in EndPass routine to print     ;G:4
0000    172 ;               correct subtest# of last test in the error on subtest message. ;G:4
0000    173 ;                                                                               ;G:4

Pass 2	58	00:00:00.81	00:00:01.66
Symbol table output	2	00:00:00.07	00:00:00.25
Psect synopsis output	2	00:00:00.01	00:00:00.01
Cross-reference output	8	00:00:00.44	00:00:00.75
Assembler run totals	1921	00:00:04.72	00:00:10.28

The working set limit was 2900 pages.
172435 bytes (337 pages) of virtual memory were used to buffer the intermediate code.
There were 40 pages of symbol table space allocated to hold 568 non-local and 48 local symbols.
842 source lines were read in Pass 1, producing 62 object records in Pass 2.
119 pages of virtual memory were used to define 48 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	8
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	28
SYS$COMMON:[SYSLIB]LIB.MLB;2	0
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	0
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	0
SYS$COMMON:[SYSLIB]LIB.MLB;2	0
SYS$COMMON:[SYSLIB]STARLET.MLB;2	9
TOTALS (all libraries)	45

813 GETS were required to define 45 macros.

There were no errors, warnings or information messages.

Assembler run totals	1628	00:00:03.37	00:00:05.58

The working set limit was 2400 pages.
118003 bytes (231 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1080 non-local and 13 local symbols.
316 source lines were read in Pass 1, producing 71 object records in Pass 2.
40 pages of virtual memory were used to define 15 macros.

Assembler run totals	1726	00:00:03.95	00:00:06.18

The working set limit was 2400 pages.
143654 bytes (281 pages) of virtual memory were used to buffer the intermediate code.
There were 70 pages of symbol table space allocated to hold 1266 non-local and 9 local symbols.
423 source lines were read in Pass 1, producing 80 object records in Pass 2.
45 pages of virtual memory were used to define 16 macros.

0000    31 ; FACILITY:     BOOTS
0000    32 ;
0000    33 ; ABSTRACT:
0000    34 ;       This module contains the bootstrap device driver for
0000    35 ;       the RB02 and RB80 disks on the RB730 controller.
0000    36 ;
0000    37 ; ENVIRONMENT:  IPL 31, kernel mode, code must be PIC
0000    38 ;
0000    39 ; AUTHOR:  Greg Robert, CREATION DATE:  09-Jun-1981
0000    40 ;
0000    41 ; NOTE: The RB730 controller is supported by host microcode which is
0000    42 ;       activated each time a device register is accessed, and for
0000    43 ;       each block transferred.  Because of this, registers must be
0000    44 ;       handled in strict accordance with the RB730 software specification.
0000    45 ;       The following special registers protocols are significant:
0000    46 ;
0000    47 ;               DAR --  When the DAR is loaded some drive functions
0000    48 ;                       are initiated.  Consequently the function code
0000    49 ;                       must be loaded into the CSR (with CRDY set)
0000    50 ;                       prior to loading the DAR for seeks and transfers.
0000    51 ;                       For data transfers, the BAR and BCR must also
0000    52 ;                       be loaded prior to loading the DAR.
0000    53 ;
0000    54 ;               MPR --  The microcode keeps an internal disk address
0000    55 ;                       register for computing cylinder difference words
0000    56 ;                       for RB02 seek commands.  If this internal register
0000    57 ;                       falls out of sync with the actual disk address
```

```
                                0000     58 ;                          it can be reset by executing a "read header" command.
                                0000     59 ;                          Note that the header must actually be read (thru
                                0000     60 ;                          the MPR) in order to effect the reset.
                                0000     61 ;
                                0000     62 ; MODIFIED BY:
                                0000     63 ;
                                0000     64 ;--
```

Symbol table sort	0	00:00:00.36	00:00:00.36
Pass 2	118	00:00:00.73	00:00:01.18
Symbol table output	2	00:00:00.02	00:00:00.11
Psect synopsis output	2	00:00:00.01	00:00:00.01
Cross-reference output	5	00:00:00.08	00:00:00.12
Assembler run totals	1820	00:00:03.99	00:00:07.13

The working set limit was 2400 pages.
140009 bytes (274 pages) of virtual memory were used to buffer the intermediate code.
There were 70 pages of symbol table space allocated to hold 1238 non-local and 13 local symbols.
470 source lines were read in Pass 1, producing 79 object records in Pass 2.
45 pages of virtual memory were used to define 16 macros.

Macro library statistics

Psect synopsis output	2	00:00:00.01	00:00:00.01
Cross-reference output	4	00:00:00.02	00:00:00.06
Assembler run totals	1289	00:00:00.71	00:00:02.28

The working set limit was 1900 pages.
13087 bytes (26 pages) of virtual memory were used to buffer the intermediate code.
There were 10 pages of symbol table space allocated to hold 57 non-local and 0 local symbols.
172 source lines were read in Pass 1, producing 17 object records in Pass 2.
14 pages of virtual memory were used to define 9 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	1
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	0
SYS$COMMON:[SYSLIB]LIB.MLB;2	0
SYS$COMMON:[SYSLIB]STARLET.MLB;2	4
TOTALS (all libraries)	5

87 GETS were required to define 5 macros.

There were no errors, warnings or information messages.

                     0000     52 ;       01      Jack Stansbury, Version 1.0, June 22, 1982
                     0000     53 ;               Added two more vectors.
                     0000     54 ;
                     0000     55 ;       02      Jack Stansbury, Version 1.1, July 24, 1982
                     0000     56 ;               Added the CRD$GB_Menu_OnLine_Debug byte. If == 1, then
                     0000     57 ;               on-line CRD command is allowed. If == 0, the CRD command
                     0000     58 ;               is disallowed. It is == 0 by default.
                     0000     59 ;
                     0000     60 ;       03      Jack Stansbury, Version 1.1, July 27, 1982
                     0000     61 ;               Added the DS$GA_DS_Ctrl_C_First (formerly DS$GA_DSCntrlC) and
                     0000     62 ;               the DS$GA_DS_Ctrl_C_Second longwords to the dispatch list.
                     0000     63 ;
                     0000     64 ;       04      Jack Stansbury, Version 1.1, August 19, 1982
                     0000     65 ;               Added the Begin and DS$GL_CRD_Debug vectors. Also changed the
                     0000     66 ;               version number bytes from 1 to 2.
                     0000     67 ;
                     0000     68 ;       05      Jack Stansbury, Version 1.1, September 10, 1982
                     0000     69 ;               Added the Boot$L_R5 address. This is used by Menu Test to allow
                     0000     70 ;               it to determine how CRD was invoked.
                     0000     71 ;
                     0000     72 ;       06      Jack Stansbury, Version 1.1, September 12, 1982
                     0000     73 ;               Took out the one added in 05 above, and added the
                     0000     74 ;               DSR$Check_MenuTest_Set and the DSR$Check_AutoTest_Set routine
                     0000     75 ;               addresses.
                     0000     76 ;
                     0000     77 ;       07      Jack Stansbury, Version 1.1, October 26, 1982
                     0000     78 ;               Added the DS$GL_CRD_Flags longword. This is set up now as a
                     0000     79 ;               'flags' longword. It is now used for CRD_Debug (bit 1) and
                     0000     80 ;               for disabling ^C echoing (bit 0).
                     0000     81 ;
                     0000     82 ;       08      Jack Stansbury, Version ?.?, March 3, 1983
                     0000     83 ;               Added a number of new (empty for now) dispatch vectors. These
                     0000     84 ;               empty ones are to allow the debug vectors (in CRD) to be big
```

```
                                0000     85 ;               enough to pass enough useful information back to the
                                0000     86 ;               DSR$Unload_CRD routine.
                                0000     87 ;
                                0000     88 ;       09      John Ciukaj     Version 6.11    4-April 1983
                                0000     89 ;               - Changed name of CRD Online debug vector
                                0000     90 ;               - Changed reference names to DSR$Check.. routines
                                0000     91 ;
                                0000     92 ;       10      Ron Parker      20-FEB-1985
                                0000     93 ;               - Added address of Ptable descriptor table
                                0000     94 ;--

0000     45 ;
0000     46 ; MODIFIED BY:
0000     47 ;                    NICK HOWGATE    15-NOV-77       VERSION 02
0000     48 ;         01         CHANGE ENTRY VECTOR DISPATCH FROM 'BRW' TO 'JMP'
0000     49 ;
0000     50 ;                    KEN CHAPMAN     30-NOV-77       VERSION 03
0000     51 ;         02         ADDED SYS$WAKE VECTOR.  REMOVED SYS$CRETVA VECTOR.
0000     52 ;
0000     53 ;                    NICK HOWGATE    15-DEC-77       VERSION 04.
0000     54 ;         03         ADDED SYS$SETPRT ENTRY MASK.
0000     55 ;
0000     56 ;                    N. HOWGATE      21-FEB-78       VERSION 05 (ESSAA-4.00).
0000     57 ;         04         CHANGED ENTRY MASKS FOR SYS$ASSIGN, SYS$DASSGN, SYS$CANCEL,
0000     58 ;                    SYS$GTCHAN, SYS$ALLOC, SYS$DALLOC.
0000     59 ;
0000     60 ;                    KEN CHAPMAN     27-MAR-78       VERSION 06 (ESSAA-4.01).
0000     61 ;         05         CHANGED ENTRY MASKS FOR SYS$EXPREG, SYS$CNTREG, DS$GETBUF,
0000     62 ;                    AND DS$RELBUF.
0000     63 ;         06         ADDED NEW ENTRY NAMES: DS$SUMMARY, DS$CANWAIT, DS$ASKDATA,
0000     64 ;                    DS$ASKVLD, DS$ASKLGCL, DS$ASKSTR, DS$SHOCHAN.
0000     65 ;         07         ADDED '+2' TO SKIP OVER LOCAL ENTRY MASKS IN SOME CASES.
0000     66 ;
0000     67 ;                    Roger Riggs             12-Jun-1978
0000     68 ;         08         Changed GETMEM, RELMEM, MOVVRT, MOVPHY to be reserved.
0000     69 ;                    previously they were dummy routines in MEMMGT.
0000     70 ;                    Also changed EXPREG, CNTREG, MMOFF, MMON, and SETPRT to
0000     71 ;                    use .VECTOR pseudo op.
0000     72 ;         09         Changed names and entry vectors of:
0000     73 ;                    RGETDATA        DSX$GETDATA
0000     74 ;                    RGETADDRESS     DSX$GETADDRESS
0000     75 ;                    RGETVIELD       DSX$GETVIELD
0000     76 ;                    RGETLOGICAL     DSX$GETLOGICAL
0000     77 ;                    RGETSTRING      DSX$GETSTRING
0000     78 ;                    RGPHARD         DSX$GPHARD
0000     79 ;                    RBREAK
0000     80 ;         10         Added DS$PRINTSIG entry point
0000     81 ;
0000     82 ;                    Roger Riggs, 14-Jan-1979        Version 5.2
0000     83 ;         11         Activated DS$PROBE entry point at 101A0
0000     84 ;
0000     85 ;         12         David R. Butenhof  06-feb-80
0000     86 ;                    Add entry point for EXE$SETAST system call
0000     87 ;
0000     88 ;                    Roger Riggs, 24-MAR-1980
0000     89 ;         13         Added dummy entry points for SYS$LKWSET, SYS$SETPRI,
0000     90 ;                    SYS$SETRWM, SYS$SETSWM, SYS$ULWSET
0000     91 ;
0000     92 ;                    Roger Riggs, 27-May-1980, Version 5.4
0000     93 ;         14         Changed entry points for QIO routines to use .VECTOR
0000     94 ;                    and JMP +2
0000     95 ;
0000     96 ;                    Dave Butenhof   9-jun-1980, Version 5.4
0000     97 ;         15         Added entry vectors for VMS V2.0 driver support routines:
0000     98 ;                    IOC$LOADUBAMAPA, IOC$GETBUTE, IOC$PUTBYTE, IOC$INITBUFWIND,
0000     99 ;                    IOC$MOVFRUSER2, IOC$MOVFRUSER1, IOC$MOVTOUSER2, IOC$MOVTOUSER1.
0000    100 ;
0000    101 ;                    Dave Butenhof   18-jun-1980,    version 5.5
```

```
                        0000    102 ;       16      Add driver entry vectors for SCH$LOCKW and SCH$UNLOCK, for
                        0000    103 ;               use by drivers doing buffered I/O.
                        0000    104 ;
                        0000    105 ;               Roger Riggs, 22-July-1980, Version 5.5
                        0000    106 ;       17      Added entry points for ???
                        0000    107 ;               Moved RMS$GL_ABSTIM, RMS$GQ_SYSTIME here from clock.
                        0000    108 ;
                        0000    109 ;               Roger Riggs, 27-Aug-1980
                        0000    110 ;       18      Added SYS$GET, SYS$READ, SYS$OPEN, SYS$CLOSE, SYS$CONNECT,
                        0000    111 ;               SYS$DISCONNECT for subset of RMS services.
```

```
0000    113 ;
0000    114 ;               Dave Butenhof, 30-sep-1980, Version 6.1
0000    115 ;       19      Added entry point for DS$ATTACH--user-callable ATTACH
0000    116 ;               command processing
0000    117 ;       20      Added entry vectors for COM$DRVDEALMEM, EXE$INSIOQ,
0000    118 ;               IOC$PTETOPFN, and moved EXE$GQ_SYSTIME here from CLOCK to
0000    119 ;               make it accessible to drivers.
0000    120 ;       21      Added entry point for DS$HELP--user-callable HELP command
0000    121 ;               processing.
0000    122 ;       22      Add entry point for IOC$MOVFRUSER
0000    123 ;
0000    124 ;               Dave Butenhof, 22-apr-1981, version 6.4
0000    125 ;       23      Add entry points for IOC$ALLOSPT, EXE$MAXACMODE, and
0000    126 ;               EXE$READLOCK.  These were specified in release notes
0000    127 ;               of version 6.3, but somehow the updates were lost.
0000    128 ;               [also, define all libraries in source]
0000    129 ;
0000    130 ;       24      - dave butenhof, 11-Sep-1981, version 6.5
0000    131 ;               Fix entries for event flag services.  They are all done
0000    132 ;               as jumps directly to label: fix to allow for entry mask
0000    133 ;               on routine.
0000    134 ;
0000    135 ;       25      - Jack Stansbury, 23-Oct-1981, Version 6.-
0000    136 ;               Fixed a truncation error in the CODE Psect, and
0000    137 ;               another possibly future one in the same Psect.
0000    138 ;
0000    139 ;       26      - Jack Stansbury, 23-Oct-1981, Version 6.-
0000    140 ;               Added DS$BRANCH entry point, by putting it between
0000    141 ;               DS$SUMMARY and DS$BGNSUB, and by taking out the blank
0000    142 ;               one after DS$ASKSTR.
0000    143 ;
0000    144 ;       27      - Jack Stansbury, 16-Nov-1981, Version 6.-
0000    145 ;               Changed the code at the DS$BREAK entry point. Put in a
0000    146 ;               JMP to the label FAKE_JUMP, which is in the routine
0000    147 ;               RESRVD_ENTRY. This was necessitated by the code at
0000    148 ;               DS$BREAK occupying too many bytes for the entry point.
0000    149 ;
0000    150 ;       28      Marion Baggett, 12-Apr-1982,    Version 6.7
0000    151 ;               Added entry point DSX$ERRPREP
0000    152 ;
0000    153 ;       29      Richard Brown, 27-May-82, Version 6.8
0000    154 ;               Added entry point DS$SETPRIEXV.
0000    155 ;
0000    156 ;       30      Richard Brown, 24-June-82, Version 6.8
0000    157 ;               Added entry point DS$MAPDBGBLOCK.
0000    158 ;
0000    159 ;       31      Richard Brown, 4-August-82, Version 6.9
0000    160 ;               Added entry point DS$FREEDBGSYM.
0000    161 ;
0000    162 ;       32      Bob Bergazzi    23-Nov-82       Version 6.10
0000    163 ;               Added entry point DS$LOADPCS.
0000    164 ;
0000    165 ;       33      Bob Bergazzi    May 16,1983     Version 6.11
0000    166 ;               Changed the order of the .LIB statements.
0000    167 ;
0000    168 ;       34      Richard Brown   22-June-83      Version 6.12
0000    169 ;               Added entry point DS$GETTERM.
```

```
0000    170 ;
0000    171 ;       35      Richard Brown   12-July-84      Version 7.0
0000    172 ;               Added entry point DS$SERVICE_DISPATCHER, to handle
0000    173 ;               all future additional services, since empty spots
0000    174 ;               in the dispatch vector area are in short supply.
0000    175 ;               Added DS$SRVDISP_TABLE, used by DS$SERVICE_DISPATCHER.
0000    176 ;               Added DSX$MOUNT and DSX$DISMOUNT to DS$SRVDISP_TABLE.
0000    177 ;               Changed DATA psect alignment from Byte to Quad.
0000    178 ;
0000    179 ;       36      Jim Shelhamer   6-Aug-1984      Version 7.1
0000    180 ;               Added entry point DS$MEMSIZE, to return the physical
0000    181 ;               memory size.
0000    182 ;
0000    183 ;       37      Richard Brown   20-Sep-1984     Version 7.1
0000    184 ;               Removed DSX$MOUNT and DSX$DISMOUNT.
0000    185 ;
0000    186 ;       38      Domenic Andella 30-Nov-1984     Version 8.0
0000    187 ;               Added new VDS multiprocessing service dispatch
0000    188 ;               vectors to DS$SRVDISP_TABLE.
0000    189 ;
0000    190 ;       39      Domenic Andella 29-Jan-1985     Version 8.1
0000    191 ;               Added new service dispatch vectors for
0000    192 ;               $DS_GETSYSBUF and $DS_RELSYSBUF
0000    193 ;
0000    194 ;       40      Amy Iorio       15-Feb-1985     Version 8.1
0000    195 ;               Added new service dispath vector for
0000    196 ;               DS$_PRINTREV.
0000    197 ;
0000    198 ;       41      Domenic Andella 26-Feb-85       Version 8.1
0000    199 ;               Establish WEAK Externals for DSX$RELSYSBUF, and
0000    200 ;               DSX$GETSYSBUF pending replacement of BUFFER module.
0000    201 ;               Replace .vectors with .word for each.
0000    202 ;
0000    203 ;       42      Ted Salem       16-Dec-85       Version 9.2
0000    204 ;               Establish WEAK Externals for DSX$interlock_test, and
0000    205 ;               DSX$set and clear interlock. Added new service
0000    206 ;               dispatch vectors for each.
0000    207 ;
0000    208 ;       43      Jim Shelhamer   24-Apr-86       Version 10.0                    ;G:2
0000    209 ;               Add new service, DS$PPSCB, which returns the base               ;G:2
0000    210 ;               address of the PP's SCB on 8200 AP systems.                     ;G:2
0000    211 ;--

Psect synopsis output	2	00:00:00.01	00:00:00.01
Cross-reference output	9	00:00:00.41	00:00:00.65
Assembler run totals	1511	00:00:03.28	00:00:05.89

The working set limit was 2400 pages.
26937 bytes (53 pages) of virtual memory were used to buffer the intermediate code.
There were 20 pages of symbol table space allocated to hold 332 non-local and 1 local symbols.
2003 source lines were read in Pass 1, producing 52 object records in Pass 2.
3 pages of virtual memory were used to define 3 macros.

0000     43 ;       Tom Soutter     16-NOV-77       VERSION 01
0000     44 ;
0000     45 ; MODIFIED BY:
0000     46 ;                TOM SOUTTER     08-DEC-77       VERSION 02 (ESSAA-3.05)
0000     47 ;       01       DSPR #20:  "ERROR HALT AT ..." MESSAGE INSERTED.
0000     48 ;
0000     49 ;                KEN CHAPMAN     30-DEC-77       VERSION 03 (ESSAA-3.06)
0000     50 ;       02       PASS AP TO USER'S ERROR ROUTINE.
0000     51 ;                NICK HOWGATE    06-DEC-78       VERSION 04 (ESSAA-5.01)
0000     52 ;       03       EMULATE CHARACTER STRING INSTRUCTIONS
0000     53 ;       04       Removed DSA$V_ERR_LOOP, use DS$INLOOP instead
0000     54 ;
0000     55 ;                Dave Butenhof, 10-sep-1980, Version 6.0
0000     56 ;       05       Add error text to support RMS error codes used within
0000     57 ;                supervisor.
0000     58 ;
0000     59 ;                Dave Butenhof, 30-sep-1980, Version 6.1
0000     60 ;       06       Change forced word-relative references to longword-relative,
0000     61 ;                since supervisor has grown.
0000     62 ;
0000     63 ;       07       - Jack Stansbury, 21-Oct-1981, Version 6.-
0000     64 ;                Added calls to QA$MAIN for the QA enhancement.
0000     65 ;                Also added .LIBRARY statements for $DS and $DIAG.
0000     66 ;                Also changed some of the error messages to lower case.
0000     67 ;
0000     68 ;       08       - Jack Stansbury, 22-Oct-1981, Version 6.-
0000     69 ;                Fixed truncation errors.
0000     70 ;
0000     71 ;       09       - Jack Stansbury, 12-Nov-1981, Version 6.-
0000     72 ;                Took out references to HALTD and HALTI. Changed them to HALT.
0000     73 ;
0000     74 ;       10       - Dave Butenhof, 17-Nov-1981, Version 6.5
0000     75 ;                Add 'end of error' message, and typecodes
0000     76 ;
0000     77 ;       11       - Jack Stansbury, 21-Nov-1981, Version 6.5
0000     78 ;                Commented out several of the calls to QA_MAIN because it
0000     79 ;                appears as though they will not be needed for the 6.5 DS version.
0000     80 ;
0000     81 ;       12       - Dave Butenhof, 25-Nov-1981, version 6.5
0000     82 ;                Added error text for error '54', 'Fatal controller error',
0000     83 ;                as it is appallingly common.
0000     84 ;
0000     85 ;       13       - Dave Butenhof, 15-Dec-1981, Version 6.6
0000     86 ;                Fix error trailer message to only type out if IE1 isn't
0000     87 ;                set.
0000     88 ;
```

```
0000     89 ;        14      - Jack Stansbury, 17-Dec-1981, Version ?.?
0000     90 ;                Added all the registers to the register masks on each of the
0000     91 ;                error routines. These are for the QA routines.
0000     92 ;
0000     93 ;        15      - Dave Butenhof, 29-Dec-1981, Version 6.6
0000     94 ;                Use new error counters for each class of error (hard,
0000     95 ;                soft, etc.).
0000     96 ;
0000     97 ;        16      - Jack Stansbury, 25-Jan-1982, Version 6.6
0000     98 ;                Discovered that the error number is truncated to a word in the
0000     99 ;                RRprError error reporting routine even though the error number
0000    100 ;                that is passed to the routine is a longword in length. This is
0000    101 ;                most likely because of APT running on PDP-11's, which operate
0000    102 ;                on word lengths. So, I changed one instruction to zero out the
0000    103 ;                top word in DSA$GL_ERRNO when the error number is moved to this
0000    104 ;                longword.
0000    105 ;
0000    106 ;        17      Marion Baggett, 2-apr-1982, Version 6.7
0000    107 ;                added the PREPERR error routine for reporting errors caused by a
0000    108 ;                testing starting and the hardware not being properly set up.
0000    109 ;
0000    110 ;        18      Marion Baggett, 9-Apr-1982, Version 6.7
0000    111 ;                Change DS$PRINTF to DSX$PRINT for type coding
0000    112 ;
0000    113 ;        19      Jack Stansbury, 10-Apr-1982, Version 6.7
0000    114 ;                Changed some of the BBC instructions to the new DS macros such
0000    115 ;                as Br_If_ ....
0000    116 ;
0000    117 ;        20      Jack Stansbury, 11-May-1982, Version 6.8
0000    118 ;                Added code to store the MsgAdr parameter from the $DS_ERRxxx
0000    119 ;                macros into a location for use by the CRD routines.
0000    120 ;
0000    121 ;        21      Jack Stansbury, 21-Dec-1982, Version 6.11
0000    122 ;                Printed out some more flags, locations, etc. in the ErrSup
0000    123 ;                routine.
0000    124 ;
0000    125 ;        22      Jack Stansbury, 03-Mar-1983, Version 6.11
0000    126 ;                Changed the code that sets the DS$GA_User_Error_Text so that
0000    127 ;                this location is set ONLY when CRD is running. This MUST be
0000    128 ;                true or else the CRD dispatch vectors will get screwed up.
0000    129 ;                The condition was this: if a diagnostic was run that issued
0000    130 ;                an error (prep, sys, dev, hard, or soft), then if CRD was run,
0000    131 ;                and one of the diags run by CRD encountered a prep error, the
0000    132 ;                path from the MEN$Preparation_Error_Text routine to the address
0000    133 ;                of the user's error text would be lost, and an exception would
0000    134 ;                result.
0000    135 ;
0000    136 ;        23      John Ciukaj     4-Apr-1983      Version 6.11
0000    137 ;                - Changed all references to CRD Bits in DSA Flags
0000    138 ;                  distinguishing between Online and Offline.
0000    139 ;
0000    140 ;        24      Bob Bergazzi    24-Apr-1984     Version 7.0
0000    141 ;                Fixed edit # 21, FMTERRSUP1, which pushed contents instead of the
0000    142 ;                address of DS$GT_VDS_VERSION on the stack.
0000    143 ;
0000    144 ;        25      Amy Iorio       18-Mar-1985     Version 8.2
0000    145 ;                Put in hardware/firmware error reporting.
```

```
0000   146 ;
0000   147 ;       26      Ted Salem       8-April-1985    Version 8.2
0000   148 ;               Added interlocks to RRPTERROR and DS_ERRSUP routines
0000   149 ;
0000   150 ;       27      Ted Salem       10-April-1985   Version 8.2
0000   151 ;               Fixed bug in DS_ERRSUP routine.
0000   152 ;
0000   153 ;       28      Amy Iorio       17-May-1985     Version 8.2
0000   154 ;               Enhancement to Printrev; Patch revision level.
0000   155 ;
0000   156 ;       29      Amy Iorio       18-June-1985    Version 8.3
0000   157 ;               Fix to Printrev; actual revision level zero recognized.
0000   158 ;
0000   159 ;       30      Domenic Andella 12-July-1985    Version 8.3
0000   160 ;               Modified routine RRPTERROR to solve mp interlocking
0000   161 ;               code problem where the saved_FP's pc must be used
0000   162 ;               instead of the currect FP to compensate for additional
0000   163 ;               call frame generation.
0000   164 ;
0000   165 ;       31      Amy Iorio       15-July-1985    Version 8.3
0000   166 ;               Branch around revision levels if no prlink given
0000   167 ;               deleted so that revision levels print with or with out
0000   168 ;               prlink address.
0000   169 ;
0000   170 ;       32      Domenic Andella 7-August-1985   Version 8.3
0000   171 ;               Comment out modification 30 until interlocking
0000   172 ;               code is reinstated.
0000   173 ;
0000   174 ;       33      Ted Salem       9-Oct-1985      Version 9.0
0000   175 ;               Changed the format for the print service if the
0000   176 ;               revision level refers to harware.
0000   177 ;
0000   178 ;       34      Ted Salem       18_Nov_1985     Version 9.0
0000   179 ;               Fixed problem in RRPTERROR. Wrong log unit
0000   180 ;               number was being used to get device name .
0000   181 ;               Also, fixed incorrect checking of rev. type.
0000   182 ;
0000   183 ;       35      Domenic Andella 17-Dec-1985     Version 9.1
0000   184 ;               Modify routine RRPTERROR such that if cpu
0000   185 ;               is a Scorpio or Nautilus, frame pointer will be
0000   186 ;               altered to accomodate interlocking. See edit 30
0000   187 ;
0000   188 ;       36      M. Baggett      16-Jan-1986     Version 9.1
0000   189 ;               Added error message for invalid load for cpu specific
0000   190 ;               supervisor.
0000   191 ;
0000   192 ;       37      M. Baggett      17-Jan-1986     Version 9.1
0000   193 ;               Change error code from DS$_NOSUPPORT to DS$_UNSUPPDEV
0000   194 ;                                                                       :G:2
0000   195 ;       3       David Gearin    23-Jan-1987     Version 10.6            :G:5
0000   196 ;               Change error message for RMS$PRV from "Unknown error" to  :G:2
0000   197 ;               "PRV, Insufficient privilege or file protection violation".  :G:2
0000   198 ;                                                                       :G:4

Assembler run totals	2066	00:00:05.34	00:00:09.50

The working set limit was 2900 pages.
190058 bytes (372 pages) of virtual memory were used to buffer the intermediate code.
There were 40 pages of symbol table space allocated to hold 664 non-local and 105 local symbols.
1238 source lines were read in Pass 1, producing 81 object records in Pass 2.
97 pages of virtual memory were used to define 38 macros.

Macro library statistics

0000     40 ;                Roger Riggs     07-FEB-79       VERSION 01. (EVSAA 5.00)
0000     41 ;       01       Added conversion of T-bit trap in compatability mode
0000     42 ;                to compatability mode trap with code=7.
0000     43 ;       02       Fixed lower limit of user stack in SEARCH routine
0000     44 ;       03       Removed ISTK/KSTK Switching stuff.  Interrupts occur on
0000     45 ;                the correct stack as indicated by the SCB
0000     46 ;       04       Fixed up position of carriage prior to calling CLI.
0000     47 ;                Make sure its on a new line at the left margin
0000     48 ;
0000     49 ;                Roger Riggs     11-Sept-1979
0000     50 ;       05       Added TST$MCHK Machine check entry point for
0000     51 ;                testing the existence of a memory location
0000     52 ;
0000     53 ;                Roger Riggs     29-OCT-1979
0000     54 ;       06       More cleanup and added DS$PRINTSIG, which can
0000     55 ;                be used by the program to print the signal array of an
0000     56 ;                exception
0000     57 ;
0000     58 ;                Roger Riggs, 14-Feb-1980
0000     59 ;       07       Added QIO to cancel Control O before printing exception info
0000     60 ;
0000     61 ;                Roger Riggs, 21-Feb-1980
0000     62 ;       08       Added duplicate defs for entry points to satisify internal debugger
0000     63 ;                Also added code to revert to old handler for arithmetic traps
0000     64 ;                and faults.
0000     65 ;
0000     66 ;                Roger Riggs, 16-Apr-1980
0000     67 ;       09       Corrected bug that reports the incorrect value in R3 during
0000     68 ;                exception call to CLI
0000     69 ;
0000     70 ;                Roger Riggs, 21-Jun-1980, Version 5.5
0000     71 ;       10       Changed DSX$PRINTSIG to use PRINTB for First line
0000     72 ;                and PRINTX for info lines.  Added new entry point
0000     73 ;                DSX$PRINTSIGI that uses PRINTI for all output.
0000     74 ;
0000     75 ;                Dave Butenhof, 11-sep-1980, Version 6.0
0000     76 ;       11       Fixed link-time truncation errors in module (change
0000     77 ;                word-relative to long-relative)
0000     78 ;
0000     79 ;                Roger Riggs, 17-Sep-1980
0000     80 ;       12       Added Type and VA to error typeout for translation not
0000     81 ;
0000     82 ;                Dave Butenhof, 23-apr-1981, version 6.4
0000     83 ;       13       Correct spelling in some messages, change to mixed case.
0000     84 ;
0000     85 ;       14       - Jack Stansbury, 22-Oct-1981, Version 6.-
0000     86 ;                Changed SEP Psect to CODE. Fixed truncation errors.
```

```
0000     87 ;                Also added .LIBRARY statements for $DS and $DIAG.
0000     88 ;
0000     89 ;        15      - Dave Butenhof, 16-Nov-1981, Version 6.5
0000     90 ;                Split the FIND_USERPC routine into two--one will actually
0000     91 ;                find the last user PC and return the address (FIND_USER_PC),
0000     92 ;                while the other (FIND_USERPC) will call the first, then
0000     93 ;                format and type the response.
0000     94 ;
0000     95 ;        16      - Dave Butenhof, 17-Dec-1981, Version 6.6
0000     96 ;                Correct a bug in TST$MCHK which seems to have been here all
0000     97 ;                along--it clears off machine check logout incorrectly.
0000     98 ;
0000     99 ;        17      - Dave Butenhof, 09-Mar-1982, version 6.6
0000    100 ;                Fix PRINTSIG to know about SS$_MCHECK code...new for V3a.
0000    101 ;
0000    102 ;        18      - Jack Stansbury, 23-Mar-1982, Version 6.8
0000    103 ;                Added typecoding to all the messages. Also made a few minor
0000    104 ;                enhancements (e.g., taking out the .LIST statements, changing
0000    105 ;                the text in the .SBTTL's, etc.).
0000    106 ;
0000    107 ;        19      - Richard Brown, 27-May-82, Version 6.8
0000    108 ;                Addition of routine DSX$SETPRIEXV, which is used to establish
0000    109 ;                a primary exception vector.
0000    110 ;
0000    111 ;        20      Jack Stansbury, 8-Mar-1983, Version 6.11
0000    112 ;                Took out the Find_User_PC routine and put it into the new
0000    113 ;                CallFrame.B32 module.
0000    114 ;
0000    115 ;        21      Bob Bergazzi    5-May-1983      Version 6.11
0000    116 ;                Added array single bit error interrupt (vector 064) reporting for
0000    117 ;                VENUS processor.
0000    118 ;
0000    119 ;        22      Bob Bergazzi    Feb. 3, 1984    Version 6.14
0000    120 ;                Changed FMT_EXCEPT and FMT_UNEXPINT to say ..."SCB vector"
0000    121 ;                instead of ..."vector". This makes it clearer to some people.
0000    122 ;
0000    123 ;        23      Domenic Andella 8-Mar-1984      Version 6.14
0000    124 ;                Remove ASBE handler from DSX$PRINTSIG routine to
0000    125 ;                MCHK8600 module, routine ASBE_WORK.
0000    126 ;
0000    127 ;        24      Domenic Andella 1-May-1984      Version 7.0
0000    128 ;                Include FAULTCLEAR selection macro, and push/pop
0000    129 ;                of selection code to each call to DSR$FAULT_CLEAR in
0000    130 ;                routines EXE_MCHK, and TST$MCHK. This allows cpu
0000    131 ;                and routine dependent action to occur.
0000    132 ;
0000    133 ;        25      M. Baggett      31-1-1985       Version 8.1
0000    134 ;                Added call to do pre-processing to signal/mechanism arrays
0000    135 ;                for AURORA trap/interrupt/fault/exception.
0000    136 ;
0000    137 ;        26      M. Baggett      7-MAR-1985      Version 8.1
0000    138 ;                Fixed truncation error.
0000    139 ;
0000    140 ;        27      M. Baggett      12-Mar-1985     Version 8.1
0000    141 ;                Added label for Aurora exceptions.
0000    142 ;
0000    143 ;        28      Domenic Andella 4-Apr-1985      Version 8.2
```

```

Psect synopsis output	0	00:00:00.00	00:00:00.00
Cross-reference output	7	00:00:00.67	00:00:01.05
Assembler run totals	2096	00:00:08.59	00:00:14.21

The working set limit was 3900 pages.
314051 bytes (614 pages) of virtual memory were used to buffer the intermediate code.
There were 70 pages of symbol table space allocated to hold 1322 non-local and 75 local symbols.
1558 source lines were read in Pass 1, producing 113 object records in Pass 2.
127 pages of virtual memory were used to define 47 macros.

0000    33 ;
0000    34 ; ABSTRACT:
0000    35 ;
0000    36 ;       This module provides general formatting services.  It converts
0000    37 ;       binary values to octal, hexadecimal, and decimal ASCII
0000    38 ;       representations, and also inserts ASCII strings and converts
0000    39 ;       date and time to ASCII.
0000    40 ;
0000    41 ; ENVIRONMENT:
0000    42 ;
0000    43 ;       VAX Diagnostic Supervisor.
0000    44 ;
0000    45 ; AUTHOR:
0000    46 ;
0000    47 ;       Henry M. Levy
0000    48 ;
0000    49 ; CREATION DATE:
0000    50 ;
0000    51 ;       29-JAN-1977
0000    52 ;
0000    53 ; MODIFIED BY:
0000    54 ;
0000    55 ;       03-02   Jack Stansbury, Version 6.11?, January 6, 1983
0000    56 ;               Change the IvSSRq error return code to BadParam. This is
0000    57 ;               to make it consistent with the Design Guide.
```

```
0000     58 ;
0000     59 ;       03-01   Jack Stansbury, Version 6.9, July 25, 1982
0000     60 ;               Changed the real SYSFAO module to work in the Diagnostic
0000     61 ;               Supervisor environment. This includes changing the PSECT names,
0000     62 ;               changing a return error code, and changing the Handler routine
0000     63 ;               code.
0000     64 ;
0000     65 ;       V03-005 MSH0001         Maryann S. Hinden       20-NOV-1981
0000     66 ;               Use longword displacement to reference EXE$SIGTORET.
0000     67 ;
0000     68 ;       V03-004 DWT0001         David W. Thiel          06-Nov-1981
0000     69 ;               Fixed condition handler.  Check argument to $ASCTIM to
0000     70 ;               prevent exception in $ASCTIM.
0000     71 ;
0000     72 ;       V03-003 PCA0001         Paul C. Anagnostopoulos         22-Jul-1981
0000     73 ;               Fixed a bug wherein !AF did not replace unprintable
0000     74 ;               characters if it encountered result string overflow.
0000     75 ;               Now it replaces those characters that it does copy.
0000     76 ;
0000     77 ;       V03-002 TCM0001         Trudy C. Matthews       10-Mar-1981
0000     78 ;               Change CALLS with word displacement to CALLS with longword
0000     79 ;               displacement.
0000     80 ;
0000     81 ;       V03-001 TMH0001         Tim Halvorsen   24-Feb-1981
0000     82 ;               Add condition handler to catch access violations
0000     83 ;               and the like, so that services like $PUTMSG do
0000     84 ;               not cause an access violation in programs like DCL
0000     85 ;               simply because not enough arguments were supplied.
0000     86 ;--

0178   666          .SBTTL  CVTNUM - Convert numeric parameter to ASCII
0178   667
0178   668 ;++
0178   669 ;
0178   670 ; FUNCTIONAL DESCRIPTION:
0178   671 ;
0178   672 ;       This routine handles the various HEX, OCTAL, and DECIMAL
0178   673 ;       conversions. The proper field is extracted from the
0178   674 ;       parameter (byte, word , or long) and the needed output
0178   675 ;       width is determined.  This is compared with the user
0178   676 ;       specified field width to determine if padding of filling
0178   677 ;       is needed.  The entire field with fill is built on the
0178   678 ;       stack and then moved so that the result will be correct
0178   679 ;       on buffer overflow.
0178   680 ;

0324  1114          .SBTTL  HANDLER - Condition handler
0324  1115
0324  1116 ;**
0324  1117 ;
0324  1118 ; FUNCTIONAL DESCRIPTION:
0324  1119 ;
0324  1120 ;       This condition handler is used to catch any errors which
0324  1121 ;       ocurred while processing the arguments, such as access
0324  1122 ;       violation.  This is because we don't want exceptions
0324  1123 ;       occurring within the system service.
0324  1124 ;       Care must be taken in this handler to deal with a second access
0324  1125 ;       violation while storing the return value for $FAO.
0324  1126 ;
0324  1127 ; INPUTS:
0324  1128 ;
0324  1129 ;       CHF$L_SIGARGLST(AP) = Address of signal vector
0324  1130 ;       CHF$L_MCHARGLST(AP) = Address of mechanism vector
0324  1131 ;
0324  1132 ; OUTPUTS:
0324  1133 ;
0324  1134 ;       The final R0 is set to the status code and the service
0324  1135 ;       is exited via $UNWIND.
0324  1136 ;--
```

Psect synopsis output	2	00:00:00.01	00:00:00.01
Cross-reference output	7	00:00:00.14	00:00:00.20
Assembler run totals	1490	00:00:02.58	00:00:04.81

The working set limit was 1900 pages.
58153 bytes (114 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 469 non-local and 55 local symbols.
1161 source lines were read in Pass 1, producing 42 object records in Pass 2.
12 pages of virtual memory were used to define 10 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	1
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	0
SYS$COMMON:[SYSLIB]LIB.MLB;2	0
SYS$COMMON:[SYSLIB]STARLET.MLB;2	6
TOTALS (all libraries)	7

492 GETS were required to define 7 macros.

There were no errors, warnings or information messages.

Psect synopsis output	2	00:00:00.00	00:00:00.00
Cross-reference output	5	00:00:00.14	00:00:00.23
Assembler run totals	1512	00:00:02.06	00:00:04.83

The working set limit was 2400 pages.
59865 bytes (117 pages) of virtual memory were used to buffer the intermediate code.
There were 20 pages of symbol table space allocated to hold 201 non-local and 9 local symbols.
475 source lines were read in Pass 1, producing 27 object records in Pass 2.
40 pages of virtual memory were used to define 21 macros.

Macro library statistics

Macro library name	Macros defined

Performance indicators

Phase	Page faults	CPU Time	Elapsed Time
Initialization	22	00:00:00.02	00:00:00.19
Command processing	885	00:00:00.26	00:00:01.18
Pass 1	910	00:00:03.76	00:00:05.53
Symbol table sort	0	00:00:00.38	00:00:00.38
Pass 2	71	00:00:01.32	00:00:02.62
Symbol table output	2	00:00:00.03	00:00:00.07
Psect synopsis output	2	00:00:00.01	00:00:00.01
Cross-reference output	6	00:00:00.48	00:00:00.66
Assembler run totals	1900	00:00:06.26	00:00:10.64

The working set limit was 2900 pages.
176666 bytes (346 pages) of virtual memory were used to buffer the intermediate code.
There were 70 pages of symbol table space allocated to hold 1265 non-local and 111 local symbols.
2017 source lines were read in Pass 1, producing 85 object records in Pass 2.
76 pages of virtual memory were used to define 25 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	1
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;6	0
SYS$COMMON:[SYSLIB]LIB.MLB;2	9
SYS$COMMON:[SYSLIB]STARLET.MLB;2	10
TOTALS (all libraries)	20

1325 GETS were required to define 20 macros.

There were no errors, warnings or information messages.

Psect synopsis output	0	00:00:00.00	00:00:00.00
Cross-reference output	2	00:00:00.05	00:00:00.12
Assembler run totals	1251	00:00:01.64	00:00:03.55

The working set limit was 2900 pages.
55458 bytes (109 pages) of virtual memory were used to buffer the intermediate code.
There were 20 pages of symbol table space allocated to hold 302 non-local and 3 local symbols.
167 source lines were read in Pass 1, producing 29 object records in Pass 2.
27 pages of virtual memory were used to define 14 macros.

Cross-reference output	2	00:00:00.04	00:00:00.09
Assembler run totals	1206	00:00:01.32	00:00:02.90

The working set limit was 2400 pages.
39972 bytes (79 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 413 non-local and 1 local symbols.
77 source lines were read in Pass 1, producing 35 object records in Pass 2.
10 pages of virtual memory were used to define 8 macros.

Psect synopsis output	2	00:00:00.00	00:00:00.00
Cross-reference output	4	00:00:00.05	00:00:00.09
Assembler run totals	1528	00:00:02.65	00:00:04.56

The working set limit was 2400 pages.
94152 bytes (184 pages) of virtual memory were used to buffer the intermediate code.
There were 40 pages of symbol table space allocated to hold 671 non-local and 10 local symbols.
156 source lines were read in Pass 1, producing 51 object records in Pass 2.
35 pages of virtual memory were used to define 14 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;5	4
