8CM643 RGB/Composite Color Monitor 80 Plus

17% Larger Screen than Standard 12" Monitors • 14" tube provides larger screen size without an appreciably larger footprint.

RGB TTL, RGB Analog, Composite Video Inputs • make monitor compatible with all three standard video signal types.

Green Raster Display Switch • emulating monochrome performance for text applications, this switch disables the monitor's ability to display anything other than green light — a feature normally found on more expensive products.

Dark Body CRT • the tube glass used in this product incorporates a special dark background material which helps to improve image contrast and reduce operator eye strain — a feature normally found on more expensive products.

690 Dots of Resolution (Horizontal) • in RGB, the monitor system will display 690 dots of image resolution on each scan line, more than the minimum number required to display 80 characters.

240 Lines of Resolution (Vertical) • the monitor will produce 240 vertical scan lines, standard for RGB use.

Displays 2000 Characters, 80 x 25 • this monitor system will display 25 lines of 80 characters each.

Comb Filter on Composite Input • when used with a composite input signal, the monitor's comb filter improves the resolution quality of the visual image.

Line Level Audio Input • provides convenient connection to a VCR or any device which generates a line level audio signal.

Image Size and Position Controls • located on the back panel, these controls allow the user to adjust both the size and position of any image displayed on the CRT, assuring compatibility with computer and other video devices.

Built-In Tilt Stand • allows the user to adjust the viewing angle to suit personal preference.

Two Year Parts and Labor Warranty • solid evidence that this is a reliable product, nationally supported by Magnavox.
