CM8702 Composite Input Color Display

17% Larger Screen Than Standard 12" Monitors • 14" tube (13" visual) provides larger screen size without an appreciably larger footprint.

Accepts Composite Video Input Signal • allows the monitor to be used with almost any computer, accessory tuner, VCR or laser disc player.

330 Dots of Resolution (Horizontal) • the maximum number of individual picture elements (pixels) this system will display when fed with a composite video input.

350 Lines of Resolution (Vertical) • when fed with an interlaced video signal, this monitor will display 350 separate horizontal lines of picture information.

40 x 25 Character Field • this monitor system can accurately display a field of 25 lines of 40 characters each, or 1000 characters total.

Green Text Display Switch • disables the monitor's ability to display anything other than green light, emulating the display found on green monochrome monitors — a feature normally found on more expensive products.

Variable Sharpness Control • allows the user to adjust the monitor's image sharpness to suit personal preference.

Comb Filter • a circuit which extracts the maximum amount of information from a composite signal for increased image sharpness.

Vertical and Horizontal Image Centering Controls • allows for adjustment of both size and position of images displayed on the CRT, assuring compatibility with computers and other video devices.

Audio Input • built-in speaker, with audio amplifier, accepts standard line level outputs from computers and VCRs.

Built-in Tilt Stand • a two-position stand allows the user to tilt the CRT face up to improve viewing and/or reduce surface reflections.

Interface Cable Included • this monitor comes equipped with cables for selected Atari and Commodore models.

One Year Limited Warranty • this Magnavox computer monitor is covered by a one-year limited warranty on parts and labor.
