Memorandum M-2850

Digital Computer Laboratory Massachusetts Institute of Technology Cambridge 39, Massachusetts

SUBJECT: BIWEEKLY REPORT, MAY 30, 1954

To: Jay W. Forrester

From: Scientific and Engineering Computation Group

1. MATHEMATICS, CODING AND APPLICATIONS

1.1 Introduction

In the future programmers' progress reports will be included only in alternate biweekly reports beginning with the June 14 report. This present report and every <u>other</u> report thereafter will contain a brief summary of the group's activities, a list of problems that have used WWI time together with the amount of time used, operating statistics, and a brief section on computer engineering.

During the past two weeks 332 coded programs were run on the time allocated to the Scientific and Engineering Computation (S&EC) Group. These programs represent part of the work that has been carried on in 37 of the problems that have been accepted by the S&EC Group.

Programmers have found the expanded post-mortem facilities of the CS II system extremely useful. In particular the conversion post-mortem has proved valuable in detecting and exhibiting errors in the prepared Flexo program tapes.

The following new problem numbers have been assigned. Detailed descriptions will appear in future biweekly reports.

Problem #	Title	Originator	
185 D.	A Scale of Turbulence	J. Howcroft and J. Smith-Meteorology Dept.	
186 C.	Tracking Response Characteristics of the Human Operator	J.Elkind Lincoln Laboratory	

M-2850			page 2
Problem #	Title	Origina	tor
187 C.	•	C.W.Steeg D.A.C.L.	, Jr.
188 C.		L.R.Kern Atlantic	Refining
189 C.	Atmosphere	A. Fleish Weather R Research	
190 D.		H. Kendal Physics D	1 epartment
191 B.		D.R.Grine Geophysic	
1.2 <u>P</u>	rograms and Computer Operation		
Problem #	Title		WWI Time
100	Comprehensive System of Service Routines	237	minutes
101 C.	Optical Properties of Thin Metal Films	212	minutes
106 C.	MIT Seismic Project	342	minutes
107 C.	(a) Autocorrelation and (b) Fourier Transform Evaluate Integrals	n, 88	minutes
108 C.	An Interpretive Program	30	minutes
109 C.	Fighter Gunsight Calibration, 8th Order D.E.	27	minutes
113 C.	Shear Wall Analogy, Simultaneous Linear Equa	tions 11	minutes
119 C.	Spherical Wave Propagation	74	minutes
120 D.	The Aerothermopressor	97	minutes
123 0.	Earth Resistivity Interpretation: Integration of empirical functions	on 62	minutes
131	Special Problems (Staff training, demonstrat: etc.)	ions, 113	minutes
132 C.	Subroutines for the Numerically Controlled Milling Machine	31	. minutes
141	S&EC Subroutine Study	23	minutes
142 D.	A Study of Shock Waves	85	minutes
144 C.	Self-consistent Molecular Orbitals	25	minutes
147 C.	Energy Bands in Crystals	279	minutes

. '× .

Problem #	Title	page 3 WWI Time	
149 C.	Digital Methods of Detecting Signal From Noise	23 minutes	
155 D.	Synoptic Climatology	226 minutes	
159 D.	Water Use in a Hydroelectric System	167 minutes	
161 C.	Response of Mass-Plastic Spring System to Transient Loading	62 minutes	
162 C.	Determination of Phase Shifts from Experimental Cross-Sections	20 minutes	
163 C.	Ferrite Phase Shifters in Rectangular Wave Guides	41 minutes	
166 C.	Construction and Testing of a Delta-Wing Flutter Model	190 minutes	
167 D.	Products of Batch Distillations with Holdup	140 minutes	
168 C.	Indicial Downwash Behind a Two-Dimensional Wing	13 minutes	
169 B.	Utilizing a General Purpose Digital Computer in Switching-Circuit Design	26 minutes	
171 C.	Improved Power Spectrum Estimates	48 minutes	
172 B.	Overlap Integrals of Molecular and Crystal Physics	478 minutes	
173	Course 6.537 Digital Computer Application Practise	240 minutes	
175 C.	Impurity Levels in Crystals	32 minutes	
176 B.	Connector Provision in Automatic Telephone Exchanges	74 minutes	
180 B.	Crosscorrelation of Blast Furnace Input-Output Data	122 minutes	
181 C.	Perturbed Coulomb Wave Functions	9 minutes	
183 D.	Blast Response of Aircraft	85 minutes	
184 D.	Scattering Electrons from Hydrogen	160 minutes	
187 C.	Response of a Fuel-Flow Controller	19 minutes	
188 C.	Effect of Gravity on Relative Water Production in Oil Reservoirs	14 minutes	

M-2850

1.3 Computer Time Statistics

The following indicates the distribution of WWI time allocated to the S&EC Group.

Programs	61 hours, 08 minutes
Conversions	8 hours, 10 minutes
Magnetic Drum Test	47 minutes
Magnetic Tape Test	70 minutes
Scope Calibration	34 minutes
PETR Test	21 minutes
Demonstrations(#131)	1 hour, 53 minutes
Total Time Used	74 hours, 03 minutes
Total Time Assigned	89 hours, 02 minutes
Usable Time, Percentage	83.1%
Number of Programs	332

2. <u>COMPUTER ENGINEERING</u>

2.1 <u>WWI System Operation</u>

(A.J.Roberts, L.L.Holmes)

Of 1834 Allied plug-in relays which were recently checked, 115 were found to have poorly soldered connections. All relays of this type in the system have now been inspected.

 $1 \le \circ$ Two of the new-type sensing amplifiers are now operating in core memory.

The second magnetic-tape printout system should be ready for use about 1 June. It would be appreciated if any tapes which produce faulty printouts or punchouts were saved for examination by the Systems Group.

2.11 Typewriter and Paper Tape

(L.H.Norcott)

A recent rash of carriage-return troubles with the delayed printer seems to have been cured by increasing the pickup time of one relay in the magnetic-tape printout control register.

A complaint that the delayed-punchout system intermittently dropped #3 code hole continued even after the punch was changed. This fact, plus a close examination of the original punch and defective tapes, convinces us that the trouble was not caused by the punch itself. Similar programs have since been recorded on magnetic tape and punched out properly. 2.12 Fairchild Camera

(L.H.Norcott)

Contacts have been installed on the footage indicators of four camera magazines. These contacts will be used with a proposed system which will give an alarm when the supply of film is running low.

2.2 Terminal Equipment

2.21 Magnetic Drums

(H.L.Ziegler)

Changeover from relay switching to electronic switching of heads for writing in the auxiliary drum is proceeding slowly and without incident. Work is about on schedule, and the three digits converted so far are performing satisfactorily.

An effort is being made to "streamline" the testing and maintenance of drum chassis. A test setup both larger and more flexible is being planned. To aid in this work, standardization of pin assignments on the chassis is being investigated. Changes required to effect this standardization do not seem excessive for the simplification of test setups obtained.

(L.D.Healy)

The auxiliary-drum checking procedure was tested and has been modified accordingly.

Work was begun on a similar checking procedure for the buffer drum.

2.22 Ferranti PETR

(F.E.Irish)

The newly installed production model of the Ferranti PETR amplifier now appears to be operating satisfactorily. It gave some trouble for a few days when one of the information-channel amplifiers started putting out spurious signals. They were traced to what appeared to be a microphonic 5695 dual triode used in that particular channel amplifier.

The final decision on how the reader will be mounted on the console table has not been reached. Operators, in general, seem to be dissatisfied with the present mounting. Any opinions on how it should be mounted would be appreciated.

3. ADMINISTRATION AND PERSONNEL

Staff Termination (J.C.Proctor)

Saul Fine

<u>New Non-Staff</u> (R.A.Osborne)

Eileen Barrett is a new secretary in Group 61.

Bernard Gardner is a new clerk who will run one of the Ozalid machines in the Print Room.

Donald Haff is a new technician in the Construction Shop.

Robert Kyle has returned to Group 6345 on a part-time basis.

Morris Sadofsky is another new technician in the Construction Shop.

Manual Spector has also joined the Construction Shop as a technician.

Non-Staff Terminations (R.A.Osborne)

Katherine Campbell

Roseanne Gillette

Daniel Lynch
